How to Incorporate Patient Engagement and Integrated Knowledge Translation (iKT)
GAP CIHR Project Grant Workshop
Tips To Go Fundable To Funded For Your Clinical Project Grant

Writing on Integrated Knowledge Translation: Areas of Weakness in Grants

Components that Should be Part of a Patient Engagement Plan

RSO Submission Process & Internal Deadlines

Maximizing on Available Resources to Enhance Grant Application
Tips to go from fundable to funded.

For Pillars 2 to 4, Patient-Oriented Research.

Carol Ladner-Keay, Director of Clinical Research, Faculty of Medicine & Dentistry

https://www.ualberta.ca/medicine/research/resources-for-clinical-researchers/resources
In draft of grant have:

- Research question/s and aims
- Hypothesis
- Outcome measures
- Significance
- Team
- Engaged with stakeholders
- Developed methodology (mostly)
Build your argument.

- **Significance and Impact 25%**
- **Background** (see the GAP-HS Guidelines for Writing Research Proposals)
  - Context (clinical or health services dilemma, other studies, your past work)
  - Rationale for the study
  - What is the knowledge gap?
  - Substantiate your claims
  - Build up context so reviewers anticipate your research question and hypothesis.
The research question

• What is the research question?
  • Get to the point early (first two pages).
  • How have knowledge users (KUs) or patient advisors contributed?

• Justify your hypothesis
  • Back it up with evidence from other studies
  • Use pilot data

• Innovation
Pilot/Preliminary data

• Use to backup your hypothesis
• Demonstrate feasibility of your methods
• Justify methods decisions
Approaches & Methodology 50%

• As you write continue to think through each step in your protocol
  • Is anything missing?
  • Were the right methods chosen to answer your question and analyze the data?

• Justify your decisions
  • Reviewers expect to see this.
  • Prove that you made the correct decisions.
Methodology

• For example, details on recruitment, randomization, allocation concealment, statistical analysis and sample size calculations
  • Provide proof for expected recruitment rate

• Primary and intermediary outcome measures
  • Justify those chosen

• Details on how methods address sex & gender.

• How the design of study is impacted by PE, KT?
KT plans

- All proposals require a KT plan.
  - Knowledge accessible to KUs
  - Meets needs of KUs
  - Are clinical guidelines impacted?

Image source: CIHR
Challenge mitigation strategy

• Outline potential challenges along with the corresponding mitigation solutions.
  ○ Prevent or mitigate

• Done well, this will demonstrate the feasibility of your study.
Team contributions

• As a lead investigator/writer you need to integrate all the components together
• Are all the method details there?
• Are decisions justified?
Expertise, Experience and Resources 25%

• Include the role of all team members and time committed by each.
  • Remember KUs and patient partners
• Demonstrate team has expertise to conduct the study.
  • It is not too late to add a co-investigator
• Consistency of methods proposed and expertise needed.
• Add health system links. E.g. Support from Strategic Clinical Networks, and outline details.
Involving knowledge users in your grants gives you a competitive advantage.

SCNs can help navigate/facilitate interactions between researchers and the health care system.

SCNs have diverse stakeholder input.

SCNs have provincial reach.

SCNs are a catalyst for knowledge translation and can affect change that has real impact.

Source: Neesh Pannu MD SM, University Liaison, Strategic Clinical Networks.
More attention to the budget

• What budgets do:
  • Gives info on how your study will be conducted
  • Impact feasibility

Resources:

• [https://www.ualberta.ca/research/support/grant-assist-program/health-sciences/resources](https://www.ualberta.ca/research/support/grant-assist-program/health-sciences/resources)
• “Preparing your CIHR Project Budget Workshop Slides”
Budget

• Justify resources needed
• Link personnel to specific activities and aims
• Remember to include cost of PE and KT activities
• Double check on alignment between Methods section and each item.
Perfect the summary

• Provide an overview of each part of the research plan
• This is one of the most important parts of your application.
  • It provides the first impression of your proposal
  • It is used to assign the committee and reviewers
  • It is used to determine if your proposal is relevant to priority funding pools, if applied for.
Overview of research plan

- Background and Importance (include key preliminary evidence)
- Research Aims (incl. research question/s and hypothesis)
- Methods/Approaches
- Brief description of applicants contribution to the field and expertise of the team.
- Expected Outcomes
Thank-you.

Comments or Questions?

Writing About iKT: What Are the Gaps?

Laura McAlpine, MSc
Knowledge Translation Project Coordinator
Alberta SPOR SUPPORT Unit, KT Platform
Outline

- Overview of KT
- Learning needs
- How to address the gaps
AbSPORU KT Platform

Provides consultation, training, and other services to health science researchers across Alberta in the areas of *knowledge synthesis*, *knowledge translation*, and *implementation science*. 
Knowledge Translation: CIHR

A dynamic and iterative process that includes synthesis, dissemination, exchange and ethically sound application of knowledge to improve the health of Canadians, provide more effective health services and products and strengthen the health care system.
KT - The (really short) Elevator Pitch

“…method for closing the gaps from knowledge to practice”

(Straus et al., CMAJ, 2009)
KT Approaches - CIHR

Integrated KT

End-of-grant KT

Research project

Research findings

(Straus et al., 2013, p. 17-18)
Learning Needs
What We Found

Goal
Look at specific learning needs of researchers by examining what they often miss

Going well
- Involvement of KU’s important
- Need to address end-of-grant KT
- Need to consider bigger picture

Needs improvement
- iKT approach, ill-defined KU’s
- Need to structure end-of-grant KT
- Need to set up for future implementation and/or implementation research
How to Address the Gaps
Research Question

Highlight that your proposed project is responding to a problem or knowledge gap identified by knowledge users.
Research Approach

Highlight how will knowledge users be involved throughout the project AND throughout the proposal
Feasibility

- Clearly describe KUs roles and expertise
- Address potential risks
- Demonstrate support
- Above all, show that the study is doable
Outcomes

- Impact
- Dissemination plan
- Evaluation plan
Tips

If you mention you have knowledge user partners…

Make sure they are listed as team members!

If you have knowledge users listed as team members…

Make sure its clear what their role is throughout the research project!

Incorporating Patient Engagement into CIHR Project Grants

Jananee Rasiah
Patient Engagement Platform, Alberta SPOR SUPPORT Unit
Patient Engagement Plan

Who is a patient?

• Current or former patients
• Caregivers
• Family members
• Patient support groups
• Patient organizations
• Community groups
• Community members
• Public
How many patients do I need to engage?

- No ideal number
- Relying on one patient can be problematic:
  - Tokenism is not patient engagement
- Involve as many patients:
  - from a broad range of backgrounds
  - who are hard-to-reach
  - live in different geographic areas
What are patient’s roles in research projects?

- Do patients just review a project when it’s done?
- Do patients need to be involved in everything?
- How do I engage with patients as partners?

How can I engage patients in my CIHR Project Grant?

- Planning and preparation
- Dissemination
- Data analysis
- Study implementation
- Study design
Patient Engagement Plan

Planning and preparation:
- Gather ideas for new research areas based on patients’ needs and interests
- Ensure research is focused on the public’s interest and concerns
- Review research tools
- Help meet funder requirements

How:
- Individual meetings
- Focus groups/discussion groups
- Appreciative inquiry
- Consensus building
Patient Engagement Plan

**Study design:**
- Review research tools
- Ensure methods are feasible and sensitive to the situations of potential research participants

**How:**
- Individual meetings
- Focus groups/discussion groups
- Open Space meetings
- Scenario planning
Study implementation:
- Help increase recruitment into the research study
- Address barriers that may arise during the study
- Brainstorm solutions or changes to design/processes
- Discuss what is going well and why

How:
- Interview matrix
- Dialogue model
- Appreciative inquiry
- Visioning
**Data analysis:**
- Take diverse perspectives into account when analyzing data and when making decisions

**How:**
- Survey/Questionnaire
- Delphi process
- Nominal group technique
- Consensus building
**Dissemination:**

- Influence the language and content to be more appropriate and accessible before disseminating.
- Consider accessible venues and modalities for dissemination.
- Increase dissemination and uptake of evidence into practice or policy.
How do I budget for PE in my grant?

- **Reimbursement**: Covering direct costs and expenses associated with participating in research and research related activities including travel, parking, child care, or caregiver needs.

- **Compensation**: Payment for time, skills, lived experience, and expertise patient partners bring to a research project or related activity.
How do I budget for PE in my grant?

- Compensation can include direct payment, in-kind contributions (conference travel, etc.), cash, or honoraria.
- Consideration about diversity of protocols
- Opting out of payment should be an option
How do I budget for PE in my grant?

- Alberta SPOR guidelines use $25/hr as a benchmark
- Principle of equity
- Work with University/Tri-Council members to ensure policies align
# Top 5 Tips for Patient Engagement

<table>
<thead>
<tr>
<th>Time</th>
<th>How much time do we have to commit to engaging with patients in our research?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Funding</td>
<td>How much funding do we have to allocate to engaging with patients?</td>

Patient Engagement Plan

Acknowledgements

Funded by
Submission for Internal/Institutional Approval: MANDATORY

Part 1: Researcher Home Page (UA): “Submit” your completed Proposal via the Researcher Home Page - allowing enough time for the Department and Faculty to review and approve it. Ideally, “Submit” should be pressed before Tuesday, February 18, 2020 so that it is approved before February 24, 2020. We will review applications in the order in which they receive Faculty approval.

Part 2: ResearchNet (CIHR): “Submit” your complete application to ResearchNet prior to the Institutional Deadline of 10:00 am, Monday, February 24, 2020 (Edmonton time). RSO will download all applications from ResearchNet and “Return” them to you so that you can “fine-tune” them. No review comments will be provided at this time.
Final Submission to CIHR:

- “Submit” your FINAL application to ResearchNet prior to the revised Institutional Deadline of **10:00 am, Tuesday, March 3, 2020 (Edmonton time)**.
- RSO will complete final submission to CIHR before 6:00 pm, Wednesday, March 4, 2020.

** Please notify your Research Facilitator if CIHR has granted you an extension so that we can revise your institution deadline.
