RE: Final report - Forestry Baseline for the Muskeg River Mine Project

Dear Judy

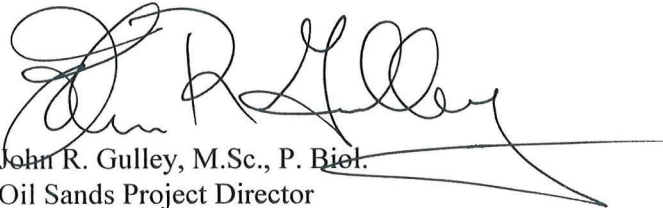

Attached is the final report on the Forestry Baseline for the Muskeg River Mine Project. This report provides details on the evaluation of the forest resources on Lease 13. This evaluation was completed following the Alberta Vegetation Inventory (AVI) standards version 2.2.

The information presented in this baseline report was incorporated into relevant sections of the Muskeg River Mine Project Environmental Impact Assessment, specifically within sections focused on terrestrial vegetation and resource use. Attached in the appendix to the report is a printout of the AVI database.

Should you have any questions about this report, please contact me at 299-5640.

Yours very truly,

GOLDER ASSOCIATES LTD.

John R. Gulley, M.Sc., P. Biol.
Oil Sands Project Director

EXECUTIVE SUMMARY

This document details the Forestry Resources within the Local Study Areas for Shell Canada Limited's (Shell) Muskeg River Mine Project (the Project) in support of an Environmental Impact Assessment. Shell's Lease 13 occurs on crown lands within the Forestry Management Unit A7 of the Athabasca Forest. The Alberta Government has granted Northlands Forest Products Ltd. the right to harvest coniferous timber under a quota disposition. Deciduous timber rights and some coniferous timber rights have been granted to Alberta Pacific Industries Inc. under a Forest Management Agreement.

Alberta Forest Service's Phase 3 forest cover maps, prepared in 1983 and 1984, were updated to the Alberta Vegetation Inventory (AVI) Version 2.2 standard. A field inventory was undertaken in September 1997 to confirm preliminary interpretation of 1:10,000 scale black and white aerial photographs.

The LSA supports approximately 49% or 5,394 ha of productive forest lands of fair to good quality. This productive forest is composed of coniferous forests cover on 2,524 ha, deciduous forest cover on 1,656 ha and mixedwood cover on 1,212 ha. Old growth forest account for less than 2 ha of the LSA.

1 INTRODUCTION

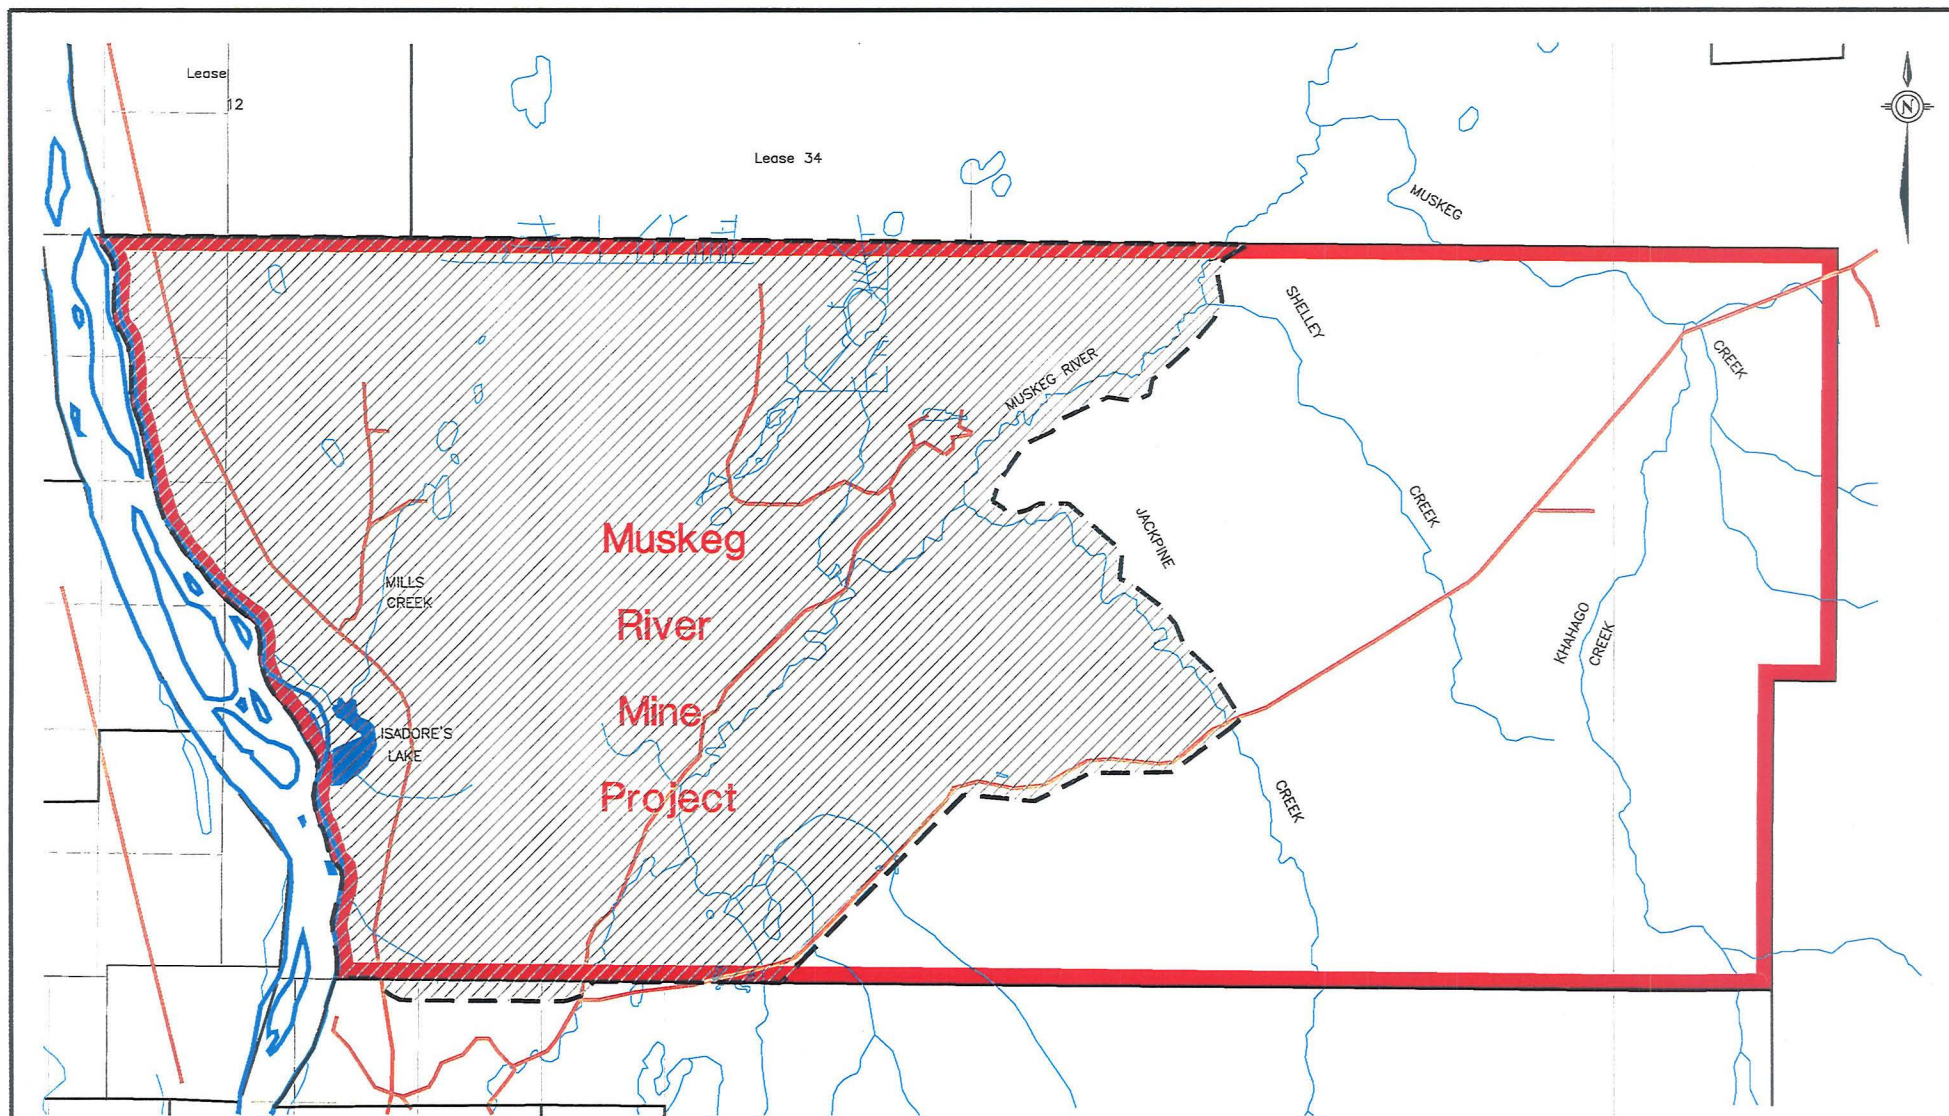

Shell Canada Limited's Lease 13 occurs on crown land within Forestry Management Unit A7 (Figure 1) of the Athabasca Forest. The Alberta Government has granted Northlands Forest Products Ltd., the right to harvest coniferous timber under a timber quota disposition. Northlands holds quota Q5. Deciduous timber rights and some coniferous timber rights have been granted to Alberta Pacific Industries Inc. under a Forest Management Agreement.

A timber quota is a commitment of timber volume using a 20-year renewable certificate with plan approval from the Alberta Forest Service. It grants a right to harvest a percent share of the annual allowable cut within the management unit. Each quota area supports approximately 40 years of harvest and is initially divided into four cut plan areas, each of which supports about 10 years of harvest.

A Forest Management Agreement gives the agreement holder the responsibility of managing the forests within their agreement area for commercial timber. Harvest scheduling and planning is completed by the agreement holder and is subject to an approved long term forest management plan and associated annual allowable cut calculation.

Alberta Pacific Forests Inc. (1997) developed a Forest Management Plan for the purposes of identifying sustainable allowable cut and projected timber harvesting levels. This plan includes projected harvest levels by Northlands Forest Product Ltd. Some harvesting plans are proposed for the eastern portion FMU A7 beginning in 1997.

Phase 3 forest cover maps of the area were prepared in 1983 and 1984 by the Alberta Forest Service. The level of detail in Phase 3 does not adequately described the forestry resources in the Muskeg River Mine Project (Project) local study area (LSA). For this reason, it was necessary to update the forest cover maps to the Alberta Vegetation Inventory (AVI) standards and conduct a field sampling program to estimate timber yields.

2 METHODOLOGY

2.1 ALBERTA VEGETATION INVENTORY

Phase 3 forest cover maps were updated to the Alberta Vegetation Inventory (AVI) Version 2.2 standards using 1:10,000 scale black and white aerial photographs taken in 1995. A field inventory was undertaken in September 1997 to confirm preliminary interpretation of photographs. AVI or forest types were classified to:

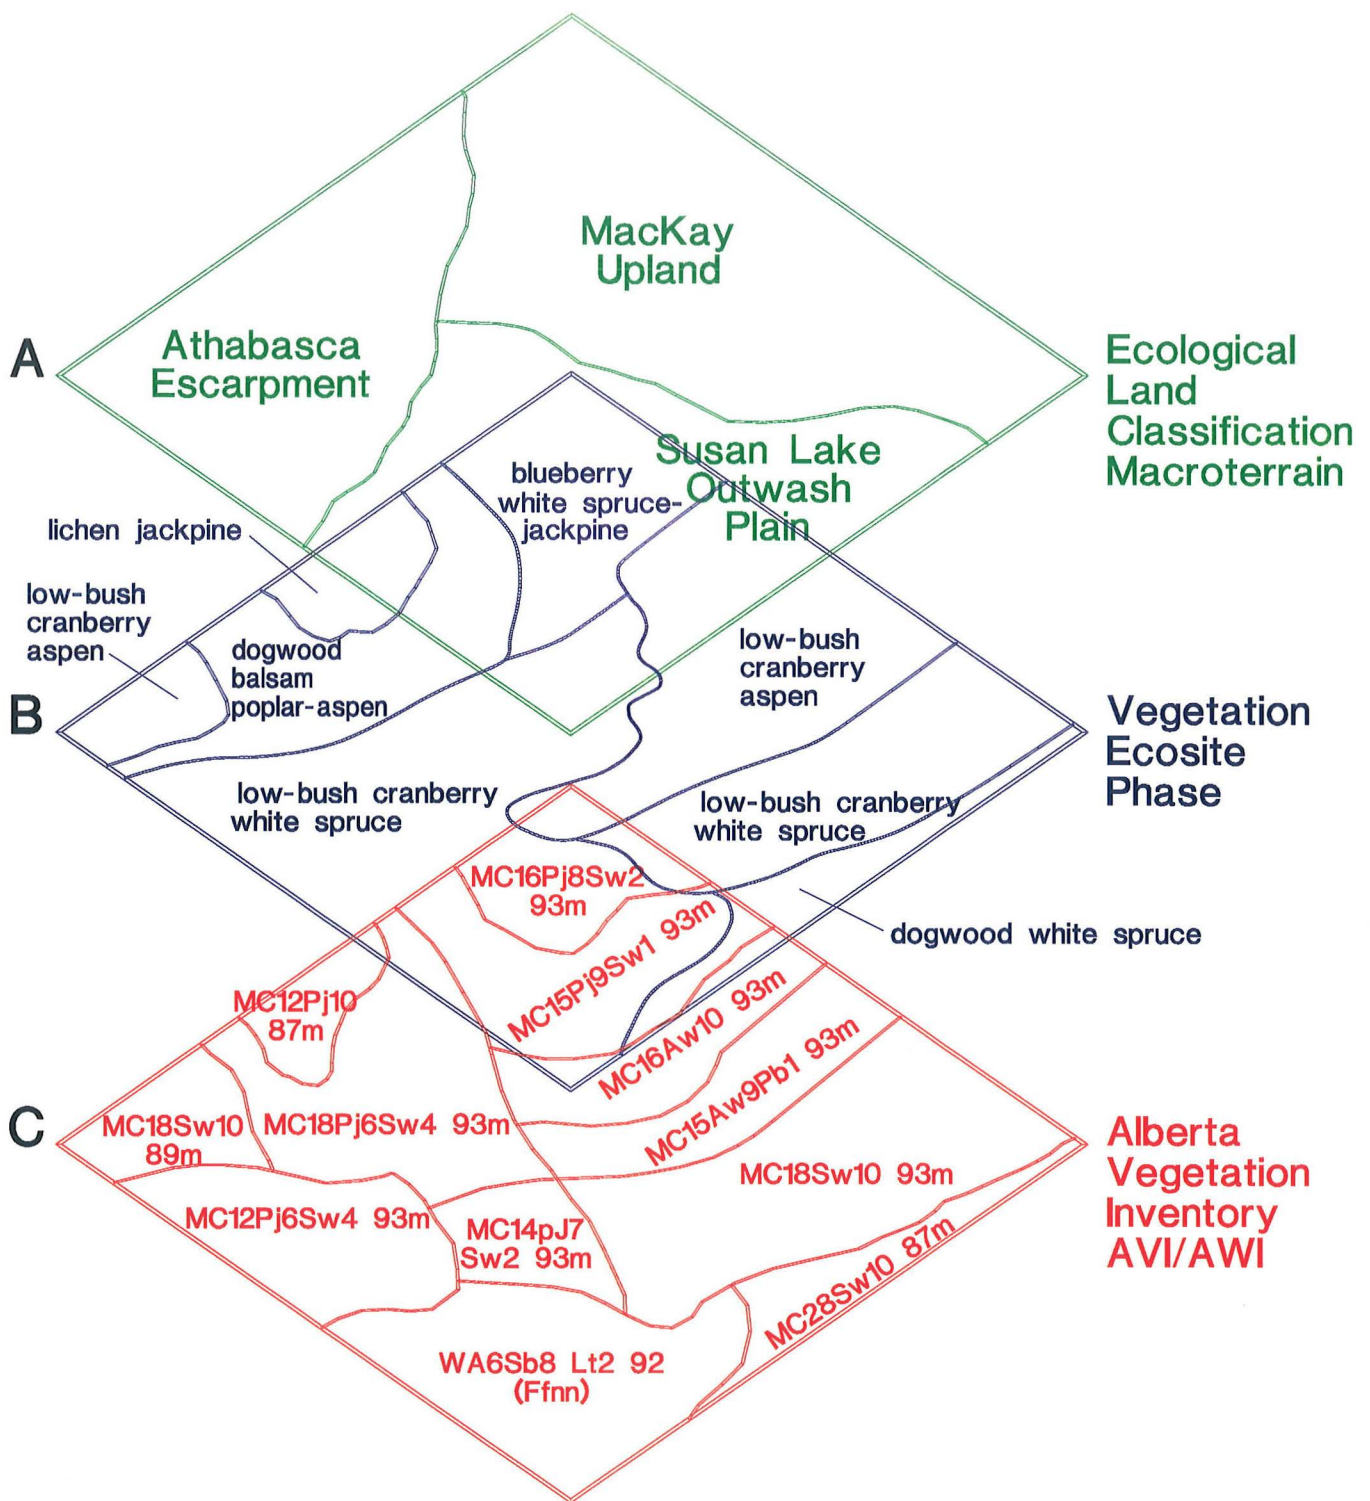

- moisture regime;
- crown closure;
- density;
- height;
- overstory and understory species composition (up to 3 dominant cover types);
- age; and
- site condition.

Each polygon includes all tree species with greater than 10% cover and indicates both horizontal and vertical stand structures. AVI polygons were transferred to a 1:10,000 scale orthophotograph. A database of polygon number and corresponding AVI attributes were integrated into GIS ARCINFO files. Alberta Wetland Inventory is presented in the Baseline Wetlands Report (Golder 1997a). Detailed description of AVI methodology is presented in "Alberta Vegetation Inventory Version 2.2 (Alberta Environment Protection 1997). Figure 2 shows the schematic of the mapping process.

The products of the study are an orthophoto mosaic of the LSA with AVI polygon boundaries and a database documenting the attributes are summarized and discussed in Section 3.

2.1.1 Study Area

The LSA for the Project is located adjacent to the Athabasca River Township 96, Range 9-11 and covers an area of 10,954 hectares (Figure 1). Boundaries were defined by the Project development area, with the exception of the south and east boundaries. Along these portions of the project development area the LSA extends a further 500 m. The southern 500 m extension buffers any proposed development. The eastern 500 m buffer is based on previous studies in the area and also includes buffer wetlands near the LSA.

2.2 OLD GROWTH FORESTS

Old-growth may be defined as those forested areas where the annual growth equals annual losses, or where mean annual increment of timber volume equals zero. They can also be defined as those stands that are self regenerating, having a specific structure that is maintained, The structure includes juvenile, mature, dying and decaying trees of the same species.

Old Growth Minimum Ages (BOVAR 1996)

- Aspen 100 years
- White Spruce 160 years
- Jack Pine 120 years

Old growth forests were identified from the AVI mapping.

2.3 UNDERSTORY REGENERATION

Understory regeneration were identified from AVI and the Terrestrial Vegetation Baseline Report (Golder 1997b).

3 RESULTS

3.1 PRODUCTIVITY

The LSA supports approximately 49% of productive forest lands of fair to good quality. The forest resources in the LSA should be considered of high quality relative to the available timber in the northern half of the Northeast Boreal Region. The AVI products, orthophoto mosaic with AVI boundaries and associated data are found in Appendix I.

There are 2,255 polygons with AVI attributes delineated in the LSA (Figures I-1 and I-2, Appendix I). The attributes assigned consist of meridian, township, range, height, stand number, moisture regime, crown closure, species composition, stand structure, origin, timber productivity ratings, naturally non-vegetated, anthropogenic disturbances, modifiers and field data locations. A total of 55 field plots were inventoried in the LSA. Multistory stands occur in 317 polygons. The remaining polygons (1,938) are single story stands (Appendix I).

The area of productive and non-productive forest types is shown in Table 1. Potentially productive land includes clearcuts and partial cuts. Clearing that have the capability to grow productive forest, but do not support a forest cover type at the time of sampling are also included. Approximately 2,525 ha, or 23% of the LSA is coniferous dominated productive forests. Mixedwood forest accounting for approximately 1,212 ha, or 11% of the LSA. Approximately 1,657 ha or 15% of the area is deciduous dominated forests. The remaining 5,560 ha or 51% is non-productive land for forests, composed primarily of various types of wetlands complexes, water and disturbed lands.

The productive forest land base (5,394 ha) is dominated by various species in the following proportion:

- | | |
|---------------------------|-----------------|
| • aspen and balsam poplar | 2,378 ha or 44% |
| • black spruce | 943 ha or 17% |
| • white spruce | 370 ha or 7% |
| • jack pine | 739 ha or 14% |
| • tamarack | 964 ha or 18% |

Area of forest cover types are presented in Table 1. Much of the productive land is found in the older age classes. Much of the area has been influenced by either 1940 or 1840 forest fires. Higher quality sites often show lower volumes per hectares than lower quality sites because higher quality sites generally include rover valley older forests, which are becoming decadent.

Total Productive Stands		566.4	1,310.8	2,766.9	690.1	59.8	5,394.0

3.2 MERCHANTABILITY

There is a road network and other disturbances that have removed forest cover from approximately 540 ha of the LSA. Table 1 lists the stands that can be salvaged and the total area associated with the dominant types. The cover of merchantable stands (i.e., having a timber productivity rating of higher from fair to good) approximates 49% of the LSA.

3.3 OLD GROWTH FOREST

The occurrence of old growth forests in the Project is limited. The frequency of fires and other disturbances such as flooding, variations in water table, insects and disease have created a forest mosaic of early successional types. Old growth forests comprise approximately less than 1% of the LSA. There are small isolated stands of jack pine located with ages estimated between 110 to 200 years (Table 2). However, although these stands are old, they do not have the characteristics of old-growth forests.

Table 2 Old Growth Forests in LSA

Dominant Overstory Tree Species	AVI Type	Average Age	Hectares
Jack Pine	mB21Pj9Aw1	127	1.5

3.4 UNDERSTORY REGENERATION

There is a considerable amount of white spruce and black spruce regeneration in the understory of stands that originated after the 1840 fire. The majority of coniferous understory is white spruce. Some trembling aspen is regenerating in upland sites (Appendix 1).

4 CLOSURE

We trust that this report presents the information that you require. Should any portion of the report require clarification, please contact the undersigned.
