

The list of Electronic Theses and Dissertations (ETDs) in this report as well as the comma delimited file consist of all those ETDs:

- Available in digital format
- Where department is available in the ETD's description
- Found either in:
- [ERA: Education and Research Archive](#) (the University of Alberta Institutional Repository, operated by University of Alberta Library)
- [Internet Archive University of Alberta Thesis and Dissertation collection](#)
- Submitted to the **Department of Renewable Resources** for the University of Alberta

IMPORTANT NOTE:

Where there is any duplication, we list the ETDs twice, and suggest the use of the Internet Archive version as it will be a higher quality scan and full-text searchable.

This list is NOT comprehensive of all theses and dissertation titles originating from the Department of Renewable Resources. This list will be dynamic as the University of Alberta Library completes the digitization and description work necessary to achieve that goal. ERA staff will update this list periodically, with titles added. **The most recent date for this list is September 17, 2024.**

Ultimately, all University of Alberta theses and dissertations will be digitized, placed into the Internet Archive and made available electronically, and migrated to ERA with full description. The associated projects are connected, multi-unit, and multi-year endeavours. For more information, contact ERA Help at erahelp@ualberta.ca.

Aasberg, S. (2023). *The role of microtopography in vegetation colonization and early forest development on mine reclamation sites*. <https://doi.org/10.7939/r3-78cb-7k73>
