NOTICE

The quality of this microfiche is heavily dependent upon the quality of the original thesis submitted for microfilming. Every effort has been made to ensure the highest quality of reproduction possible.

If pages are missing, contact the university which granted the degree.

Some pages may have indistinct print especially if the original pages were typed with a poor typewriter ribbon or if the university sent us a poor photocopy.

Previously copyrighted materials (journal articles, published tests, etc.) are not filmed.

Reproduction in full or in part of this film is governed by the Canadian Copyright Act, R.S.C. 1970, c. C-30. Please read the authorization forms which accompany this thesis.

THIS DISSERTATION
HAS BEEN MICROFILMED

AVIS

La qualité de cette microfiche dépend grandement de la qualité de la thèse soumise au microfilmage. Nous avons tout fait pour assurer une qualité supérieure de reproduction.

S'il manque des pages, veuillez communiquer avec l'université qui a conféré le grade.

La qualité d'impression de certaines pages peut laisser à désirer, surtout si les pages originales ont été dactylographiées à l'aide d'un ruban usé ou si l'université nous a fait parvenir une photocopie de mauvaise qualité.

Les documents qui font déjà l'objet d'un droit d'auteur (articles de revue, examens publiés, etc.) ne sont pas microfilmés.

La reproduction, même partielle, de ce microfilm est soumise à la Loi canadienne sur le droit d'auteur, SRC 1970, c. C-30. Veuillez prendre connaissance des formules d'autorisation qui accompagnent cette thèse.

ABSTRACT

This study was designed to examine the nature and extent of the need for faculty development as perceived by faculty members and administrators of a selected university in Thailand. The purpose of the study was to determine the perceptions of needs relative to specified aims, methods, and organizational arrangements in faculty development. The study also investigated the differences of the perceptions between faculty members and administrators, as well as the differences by respondent characteristics.

The data for this study were collected using a questionnaire specially developed in Thai language. Usable returns were received from 89 faculty members and 39 administrators, a 64 percent response from the randomly selected sample of 201 from a list of 1981+1982 full-time academic staff of four metropolitan campuses of a selected university in Thailand.

The findings indicated that there was a perceived need for faculty development in the university under study. The highest needs for faculty development were in the areas of instructional and personal improvement, while the lowest needs were in the areas of student needs and organizational development. It seemed evident that practices of faculty development activities at the university were limited and that the need for increased practices was strongly expressed. There were no differences in perceptions between faculty members and administrators. Differences in

perceptions among groups by respondent characteristics, however, were found. Respondents with less experiences at the university under study and those with non-educational experiences outside the university perceived a greater need for faculty development than did other groups.

Implications of this study for improving faculty development programs at the university under study as well as for other universities in Thailand were suggested. It was proposed that commitment to faculty development be included in the policies of university administration; that faculty development centers be established at both the main campus and satellite campuses; that participation in faculty development activities be encouraged through appropriate recognition and rewards; that faculty development activities be introduced to the most receptive groups; and that adequate funding be allocated for faculty development programs.

Also a number of recommendations were made for further research in the area of faculty development. It was recommended that studies similar to this one be conducted on other campuses of the university under study as well as at other universities in Thailand; and that further studies be conducted on such topics as students' perceptions of faculty development needs; effectiveness of faculty development programs; efficiency of faculty development programs; and the need for preservice training of faculty members in Thai universities.

ACKNOWLEDGEMENTS

I would like to express my sincere appreciation to Dr. Abram G. Konrad, chairman of the supervisory committee, for his assistance, support and advice.

Appreciation is also expressed to other members of the supervisory committee, Dr. D. A. MacKay, Dr. J.M. Small, and Dr. H. W. Roberts; and also to Dr. G. V. Barrington, the external examiner for their constructive criticisms during the final examination.

A special word of thanks is due to Mr. Choocheep Onkhoksoong and his colleague who assisted in collecting the data on my behalf; to a number of my Thai friends, especially Dr. B. Ooraikul, who helped me in developing the Thai version questionnaire; also to Mrs. Christiane Prokop for writing the special program for analysis of the data.

Finally, to my wife Petcharat and our children Nantarat and Udomkati, I wish to express my gratitude for their support, understanding and patience.

CHAPTER 1

INTRODUCTION AND STATEMENT OF THE PROBLEM

A major constituent of any institution of higher education is its faculty, and the major activities of an institution are established, conducted and supervised by its faculty (Gaff, 1975). A college or university is judged by the performance of its faculty; and the quality of educational programs is directly related to the behavior of faculty members, especially their effectiveness as teachers (Mathis, 1979). Therefore, a primary vehicle for improving an institution is through improving the performance of its faculty.

For years, colleges and universities have engaged in practices to aid in the professional development of their faculty (Centra, 1976). But in the last decade, faculty development became a rallying cry with increasing intensity (Gaff, 1980). It has become an increasingly prominent concept for a growing number of faculty members and administrators and grown from a low level of concern to a high ranking priority in some institutions (Bergquist and Phillips, 1975).

The need for effective faculty performance in universities in Thailand has been documented by many writers (Bennet, 1975; Ketudat, 1978; Ministry of Education, 1971; Muhammadi, 1977; Sanguanruang, 1973; Techakempuch, 1973;

Valenti and Gutek, 1977). Some efforts have been made in Thai universities to provide faculty members with continuing opportunities to improve their effectiveness (Javier, 1977; Ketudat, 1978). However, the absence of literature indicates that no systematic study has been done in Thailand to ascertain the needs of the university academic staff with regard to faculty development.

To a large extent the effectiveness of faculty development programs depends on the commitment of faculty members to improving the educational process. The faculty members' own needs, values, and attitudes are equally important (Mathis, 1979). Some writers maintain that a needs assessment is an essential part of an effective faculty development program (McKay, 1979; O'Banion, 1972; Samlin, 1967; etc.).

The objective of this study was to investigate the perceptions of faculty members and administrators of a selected university in Thailand regarding the nature and the extent of the need for faculty development. It was felt that the perceptions of these two groups were most important in ascertaining the needs in this area.

Statement of the Problem

The purpose of this study was to determine the nature and extent of the need for faculty development programs as perceived by faculty members and administrators of a selected university in Thailand. The study focussed upon three areas: (1) aims of faculty development; (2) methods of attaining faculty development aims; and (3) organizational arrangements which facilitate faculty development. The following sub-problems were examined:

1. What are the perceptions regarding the aims of faculty development?
2. What are the perceptions regarding the methods of faculty development?
3. What are the perceptions regarding the organizational arrangements for faculty development?
4. What are differences between faculty members' and administrators' perceptions regarding the aims, methods, and organizational arrangements of faculty development.
5. How are the differences in perceptions regarding the aims, methods, and organizational arrangements of faculty development related to campus, faculty, academic rank, qualification, experience at the university under study and most recent full-time job of the respondent?

Conceptual Framework

This study was designed to provide information which would contribute to the understanding of faculty development programs. A conceptual framework relating to a total faculty development program was developed.

System for Faculty Development

A faculty development program can be conceptualized in terms of systems theory. This theory originated in the field of natural sciences and has been used widely in various fields, including applied behavioral sciences such as education (Ammentrop, et al., 1973). As pointed out by Andes (1970), a system is a set of interrelated components surrounded by a boundary. The function of a system is to transform inputs into desirable outputs. It maintains and improves itself through the process called feedback, whereby the system adjusts to input energy from the environment, suprasystems, and subsystems, and where the output is adapted in general to this feedback.

Figure 1 presents a model depicting specific aspects of a faculty development program. It presents diagrammatically the relationships between environments, inputs, transformation process, and feedback elements of the system.

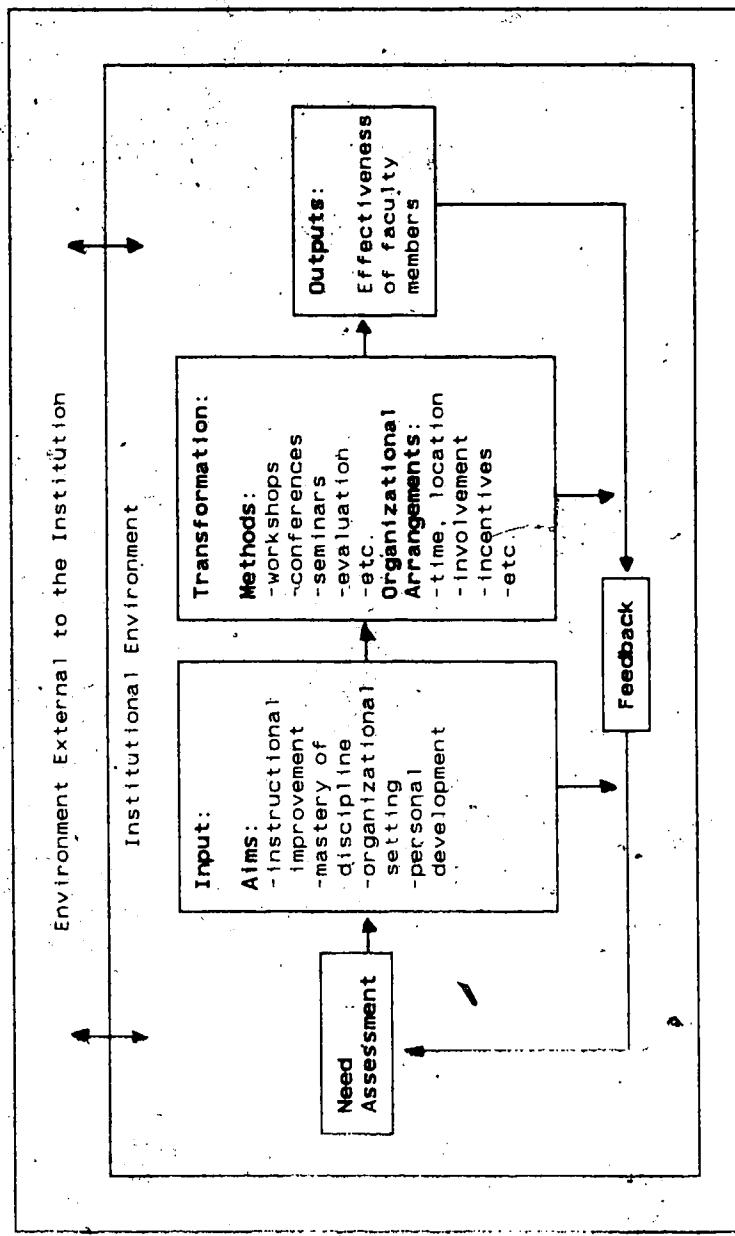

Figure 1

A System for Faculty Development

The model depicts faculty development as a system operated in suprasystems which include an institution and a larger social system to which an institution belongs. Both environments, external and internal to an institution, have influence upon faculty development. This system attempts to transform inputs in such forms as aims and resources into desirable outputs known as effectiveness of faculty members. The transformation process includes methods and organizational arrangements of faculty development. Needs assessment and feedback are drawn from, and in turn have an impact upon, both inputs and transformation processes.

Needs Assessment

Needs assessment provides a useful method of improving an organization's capacity for planning, priority setting and resource allocation decision making (Kimmel, 1977). It serves as a sound strategy for identifying the aims, methods, and organizational arrangements of an effective faculty development program. O'Banion (1972) and Cross (1979) maintain that most planning offices at governmental or institutional levels have conducted needs assessment in the past and would do the same in the near future.

Figure 2, adapted from Mazmanian (1977:9), presents a matrix for identifying potential differences in needs for faculty development that could arise from the perceptions of faculty members and administrators of an institution.

Within this matrix, the two dimensions provide the basis for identifying needs that could arise from the potential gaps between current and desired practices and between perceptions of faculty members and administrators.

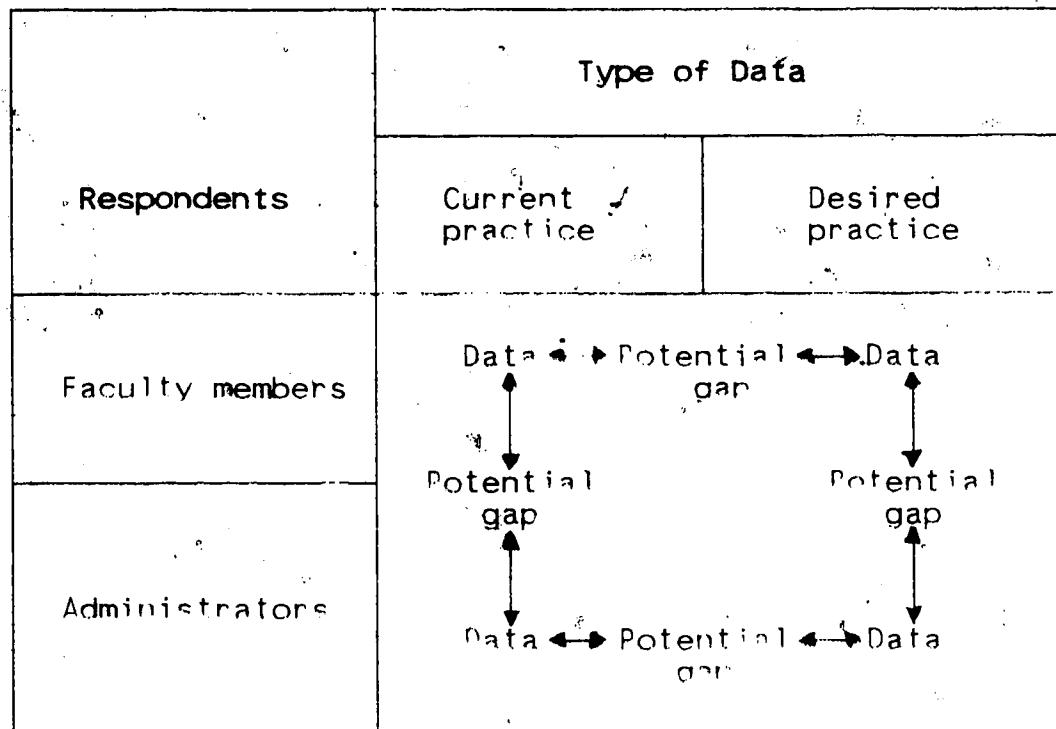

Figure 2.

A Matrix of Potential Needs for Faculty Development

The degree of needs varies according to the gaps that exist between current and desired practices as perceived by faculty members and administrators. Identification of such gaps could help to determine what aims, methods, and organizational arrangements of faculty development activities could best serve to improve faculty performance.

It is also desirable to consider the discrepancies in the perceptions of faculty development needs between faculty members and administrators. Anderson and North (1978) note that administrators who are responsible for faculty development programs often assume that their perceptions of the needs for faculty development are shared by most of their faculty members, and that a faculty development program which fulfills these needs will appeal to a significant group on campus. These assumptions may lead to failure in faculty development activities. An awareness of the gaps between the perceptions of faculty members and administrators, therefore, may help in planning faculty development programs which respond more effectively to the needs of faculty members.

Definitions of Terms Used

For the purposes of this study, the following definitions of terms were used:

Faculty development. Faculty development was defined as "an institutional process which seeks to modify attitudes, skills and behaviors of faculty members toward greater competence and effectiveness in meeting student needs, their own needs, and the needs of the institution" (Francis, 1975:720).

Faculty member. A faculty member is defined as a full-time faculty employee at a university who is primarily responsible for conducting learning experiences for students.

Administrator. An administrator is defined as a full-time employee at a university who is primarily responsible for planning, organizing and implementing instructional programs and support services.

Aims. The term, "aims," refers to the knowledge, skills and attitudes to be conveyed or learned in the courses; workshops, lectures or laboratories associated with faculty development programs.

Methods. The term, "methods," refer to the means of communicating or acquiring the knowledge, skills and attitudes in faculty development programs.

Organizational arrangements. Organizational arrangements refer to provisions within an institution to

bring about the faculty development programs.

Needs assessment. Needs assessment is the process employed in determining the difference or gap between where one is and where one wants to be or should be (adapted from McKay, 1977:2).

Significance of the Study

The significance of faculty development programs in institutions of higher education is widely acknowledged by a number of writers such as O'Banion (1972), The Group for Human Development in Higher Education (1974), Bergquist and Phillips (1975, 1977), Konrad and Small (1976), Piper and Glatter (1977), Greenaway and Harding (1978), Lingquist (1979), Teather (1979), and Rhode and Hounsel (1980). It is generally agreed among these writers that faculty development should receive high priority in colleges and universities.

In order to organize effective faculty development programs, a needs assessment is required. Samlin (1967), O'Banion (1972), Hammons and Wallace (1976), and McKay (1977) maintain that needs assessment is an essential part of any planning process. It applies directly to the planning and implementation of faculty development programs. O'Banion (1972) explains that needs assessment is the process of determining the difference or gap between where one is and where one wants to be or should be, and thus it

is desirable for effective planning.

The survey of literature indicates that very little needs assessment research for faculty development in universities has been done. Most studies attempting to determine how instructors perceive their needs for on-the-job professional growth are limited to teachers in public schools and two-year colleges. As for faculty development needs in universities in Thailand, no such study has been reported.

The lack of research regarding the need for faculty development in Thai universities leads to this study. The findings of this study will be beneficial not only to a selected university, but also to all other higher education institutions in Thailand. Specifically, the findings of this study will provide the following:

1. A conceptual framework for understanding faculty development. This framework can be helpful to researchers and practitioners at universities in Thailand and elsewhere.
2. Guidelines for determining the provision of institutional, as well as governmental, faculty development programs.
3. An approach to faculty development appropriate for implementation in the university under study and other universities in Thailand.
4. Baseline data for other, more refined, studies of

faculty development.

Delimitations of the Study

The following were the delimitations of this study:

1. This study was delimited to the faculty development activities at four campuses of a selected university in Thailand.
2. The respondents were drawn from full-time faculty members and administrators of a selected university in Thailand in 1981-82.
3. The study focussed upon the perceived needs in terms of aims, methods and organizational arrangements for faculty development at one institution.

Limitations of the Study

Since this study relied on the data collected by means of the Thai version of the questionnaire, the following limitations pertaining to this study were noted:

1. Some respondents may not have responded to some questions.
2. Some respondents may have misunderstood some questions.
3. The low percentage of returns of the questionnaire could have biased the results.
4. Some inconsistencies may have existed between the Thai and English versions of the survey instrument due to some inaccuracy in translation.

Organization of the Thesis

In Chapter 1, the area of interest is delineated and the nature of the problem identified. The nature and extent of previous research are presented, indicating the absence of faculty development research specific to universities in Thailand. Included also are the purposes and the significance of the study, the conceptual design for the study, definitions of terms, delimitations and limitations of the study.

Chapter 2 reviews the literature in the field of higher education in terms of faculty development, needs assessment and the system of higher education in Thailand.

The design of the study is outlined in Chapter 3. Sampling techniques, instrumentation, and data collection and analysis procedures are discussed.

The results of data analysis are reported in Chapter 4.

The summary, conclusions, implications of the study and recommendations for further research are presented in Chapter 5.

CHAPTER 2

REVIEW OF THE LITERATURE

The review of relevant literature began with a systematic search of periodical indices, card catalogues of libraries at the University of Alberta, dissertations and dissertation abstracts, and the ERIC document reproduction index. The review included information about faculty development in general and the perceived needs for faculty development in higher education in particular.

A number of the terms closely related to faculty development were used in the literature search, including such terms as *staff development*, *faculty development*, *faculty renewal*, *inservice training*, *inservice education*, *professional development*, *teacher improvement*, *teaching or instructional improvement*, *instructor development*, and *continuing education*. Some writers distinguish clearly among these terms; others use them interchangeably. The literature review is summarized in three broad areas: faculty development, need assessment and the systems of higher education in Thailand.

Faculty Development

The literature reviewed here includes such dimensions as: state of the art of faculty development, rationale for faculty development, aims of faculty development, methods of faculty development, and organizational arrangements which influence the effectiveness of a faculty development programs.

State of the Art of Faculty Development

Although faculty development is hardly new, a great deal of its growth occurred during the 1970s. Discussion in this section includes early developments and current practices.

Prior to the 1970s, only limited faculty development programs with limited effectiveness were reported by researchers. Miller and Wilson (1963) conducted a survey in 1960 involving 214 colleges. They identified a few widely used practices of faculty development which were designed to orient new faculty members to an institution or to help update faculty members through such activities as precollege workshops, financial assistance for attendance at professional meetings, and occasional departmental conferences on teaching. They concluded that faculty development programs in most institutions lacked clear articulation and comprehensive design.

Similar conclusions were drawn from a number of subsequent studies. Eble (1971), for example, reported that faculty members at 150 institutions stated almost unanimously that their institutions did not have effective faculty development programs. He further noted that only few institutions set aside specific percentages of their budget for faculty development.

Faculty development practices in American universities, in particular, began in the middle 1960s under the name of instructional improvement programs. Alexander and Yelon (1972) collected information on instructional improvement or educational development programs. They concluded that these practices were not as effective as they should be.

Bergquist and Phillips (1975) pointed out that, in the past, three of the most widely used approaches to instructional improvement were (1) the reduction of student-faculty ratio; (2) the purchase of such costly new instructional technology as videotape systems, instructional computers and learning machines; and (3) the recruitment of new Ph.D's with supposedly fresh ideas. Other approaches included changing curriculum, recruiting brighter students, establishing new governance systems and undertaking a comprehensive self-study. Generally, these were carried out in isolation and usually were not effective. Lhota (1976:21) believed that "these approaches were not comprehensive and systematic and, therefore, did not produce

effective and lasting changes."

Since the early 1970s, many efforts have been made to improve faculty development practices in higher education.

According to the most extensive survey of faculty development in higher education conducted nation-wide by Centra (1976), over half the postsecondary institutions in the United States had established faculty development programs. Although some of these consisted of only the traditional approach to staff development, many also incorporated newer approaches such as teaching improvement and career centers.

The evidence of tremendous progress achieved during the past decade in faculty development in higher education is in many forms. Some evidence is provided by Gaff, Festa and Gaff (1978) and Gaff (1980):

1. A large number of colleges and universities have established new faculty development programs.
2. Many assumptions, concepts and model programs embracing new versions of faculty development have been devised, tested and shown to be workable.
3. Major funding programs have been initiated by private foundations and federal agencies to support these approaches. But perhaps most significant, there is an increasing inclusion of faculty development efforts in the budget of individual institutions.
4. Many materials, activities and exercises have been

- devised for use with faculty members of colleges and universities. The three volumes of *Handbook for Faculty Development* by Bergquist and Phillips (1975, 1977 and 1981) are among the best references. In addition, a variety of other useful materials are also available, including questionnaires and interview forms, summaries of research on teaching and learning, guidelines for designing workshops, video and audio cassettes on teaching development, simulations and games.
5. The professional literature on faculty development has grown extensively and is still expanding. Not only have several new books been published, but the descriptive, analytic, and evaluative articles in professional journals, and reports from individual campuses are increasing. A summary of some of this literature and other resources is available in *Professional Development: A Guide to Resources* (Gaff, Festa and Gaff, 1978).
 6. Conferences on various aspects of faculty development and training workshops have been well organized and well attended.
 7. A new group of professional academics has emerged to improve programs for staff, instructional and organizational development.

In summary, the overview of faculty development indicates that faculty members and administrators in higher

education increasingly accept its importance. The literature indicates that not only instructors in colleges but also those in universities need effective faculty development programs to help them improve their performance. However, the research on the need for faculty development among university faculty members is extremely limited.

Rationale for Faculty Development

The reasons for the current interest in faculty development in postsecondary education are many. The ones mentioned most frequently are as follows:

Inadequacy of preservice preparation. Most instructors in colleges and universities have no specific training for postsecondary instruction. Wise (1966:86) points out that: "The American college teacher is the only high level professional man in the American scene who enters upon a career with neither the prerequisite trial of competence nor experience in the use of the tools of his profession."

Inadequate training is true not only in the United States but also in other countries (Javier, 1977:75).

Besides, it seems that preservice preparation for college instruction has not been seen as essential for the recruitment of faculty members. Indeed, it is assumed that the acquisition of a doctorate qualifies one to teach in one's discipline. Gaff (1979:232) expresses this widely-held view as follows:

It has been an article of faith among academics that just as training to conduct research in one's academic discipline -- certified by a doctoral degree -- prepares one to teach, the acquisition of additional knowledge and the conduct of research improve teaching.

However, Gaff (1979:232) himself questions this view:

While the need for instructors to know what they are talking about cannot be disputed, there has been increasing recognition that professors' scholarly competence does not automatically translate into teaching effectiveness.

The lack of suitable preservice training opportunities for college instructors is confirmed by O'Banion (1972) who contends that such programs are grossly inadequate. Even when they are available, a number of writers such as Gleazer (1967) and Morgan (1971) question whether these programs actually prepare graduates for college teaching.

Even though instructors in colleges and universities have inadequate preservice preparation, they are expected to acquire and maintain the knowledge, skills and attitudes necessary for teaching at this level while they are employed.

Decrease in faculty mobility. Institutions of higher education now face the harsh reality of decreased funding (Group for Human Development in Higher Education, 1974). Consequently, a limited number of new faculty members are recruited annually. Most faculty members recognize that there are fewer opportunities for mobility, and there is a likelihood of spending a large portion of their academic careers at a single institution (Gaff, Festa and Gaff, 1978).

Faculty development practices are needed in order to help faculty members continue to be effective and creative within a particular institutional environment (Gaff and Justice, 1978).

Colleges and universities need instructors with new knowledge and skills in order to keep the institutions vital (Bergquist and Phillips, 1975; Gaff and Justice, 1978).

Responding to this challenge, Centra (1978a:188) states that:

With less turnover and new blood, colleges can no longer depend on new staff to help keep them vital; nor can teachers broaden perspectives simply by changing jobs. Teaching improvement programs and faculty renewal efforts of various kinds have become a partial remedy for this steady state condition.

Changes in student characteristics. The student body of today has different characteristics from the student body of ten or twenty years ago. Some changing characteristics include the widening diversity of economic and ethnic background of students entering postsecondary education; the entry of more adults returning to education after years in the work force; and the increased number of non-traditional and/or underprepared students (Gaff and Justice, 1978).

Faculty development can serve as one of the effective means for institutions to adapt to new clients. It helps bring about changes in faculty members to be more flexible and "more effective" (Gaff, 1978a:188). Gaff believes that faculty development can be used to assist in the development of

possibly revise their instructional methods.

Expansion of knowledge and technology. Never before have knowledge and technology been changed and improved at as rapid a rate as they are today. This advancement has infiltrated almost every aspect of modern life, including higher education. The accelerating expansion of new knowledge and technology requires that all faculty members continually bring their skills and knowledge up-to-date. In other words, they need to acquire knowledge, skills and attitudes which could not likely have been learned from their previous training or work experiences (Javier, 1977).

More and more educational technologies are available in colleges and universities. Faculty members require more knowledge and technical support in using such technologies. Indeed, many faculty members require some assistance to help them gain the skill and technical knowledge necessary to use these devices (Ordio, 1970).

Research in educational psychology and in instructional methods is constantly providing more information for use in improving the teaching learning situation. If faculty members are to make adequate use of this knowledge with respect to instructional strategies, they must have access to such information and there must be some assistance for integrating this information into classroom activities. It seems appropriate, therefore, that some programs should be

established for keeping faculty members up-to-date with respect to their role as teachers.

Disenchantment with college instruction. There has been a growing dissatisfaction with the quality of college instruction. Students complain about ill-prepared and ill-delivered lectures, outdated and outmoded knowledge, and inept handling of classroom student-teacher interaction (Javier, 1977). Many parents are not at all sure that instruction is as effective as the high costs of higher education suggest it should be (Centra, 1976). Legislators have pressured public institutions, including colleges and universities, to become more accountable (Centra, 1978a).

Disenchantment of these influential groups forces institutions of higher education to improve the quality of instruction.

Influence of social sciences. The current movement toward the improvement of faculty performance has been partly influenced by development in other fields of the social sciences (Gaff, Festa and Gaff, 1977). Psychologists and other social scientists have begun to look at the adult years, especially the middle years of life, with greater interest and intensity. Developmental psychology previously focussed on childhood and adolescence, with more recent attention on the aged, but the gap between the earliest and the latest years was neglected (Neugarten, 1968). Only after

the early 1970s, did psychologists such as Gould (1972) and Sheehy (1976) outline and describe the stages of adult development through which most people progress.

Gaff, Festa, and Gaff (1977) note from their review of the literature that, in addition to easily perceived periods of growth, there are periods of instability, transition, and suspended animation that eventually can lead to greater instability. Hodgkinson (1974) relates these general stages of adulthood to the life of faculty members and administrators. He speculates that there may be a sequence of progression through the academic life just as there is in human development itself. In other words, an adult can be seen as an unfinished product capable of learning new skills and knowledge and growing and changing while passing through somewhat predictable stages of development. This paves the way for faculty development. If one assumes that adults are capable of personal growth and development, and that the craft of teaching can be taught and learned, then the concept of faculty development has validity.

The above discussion suggests that instructors of institutions of higher education need effective faculty development programs in order to help them acquire and maintain knowledge, skills and attitude necessary to compensate them for inadequate preservice preparation, decreased faculty mobility, changes in student characteristics, and expansion of knowledge and technology.

Faculty development also helps colleges and universities respond better to the general concerns regarding postsecondary instruction. Besides, evidence from the social sciences implies that faculty development in higher education relates to growth stages in adult development.

Aims of Faculty Development

The review of literature indicates that the aims or content of faculty development in higher education vary from one writer to another. Findings of various researchers including Gile (1972), Weleschuck (1977) and Lindquist (1979) regarding aims of faculty development can be grouped into four domains: (1) instructional improvement; (2) mastery of one's discipline; (3) organizational setting; and, (4) personal development.

In terms of instructional improvement domain the following aims appear to be relevant: to learn how to structure learning experiences (simple to complex); to develop strategies which will enable students to participate in designing their own learning experiences; to learn how to individualize instruction; to increase the quality, range, variety, and flexibility of teaching resources used by instructors and students; to improve design and methods of teaching; to increase professional knowledge of teaching-learning theory, research, and practice and to encourage use of promising teaching approaches; to motivate

instructors to rectify course and teaching problems perceived by students; to provide opportunities for peer group demonstration of successful techniques or solutions to problems; to learn ways of reinforcing learning; to develop skill in making learning relevant for students; to improve discussion techniques in teaching; to learn how to use self-evaluation techniques to improve teaching performance; to learn to integrate content activities with other courses; to learn the psychology of adult students; to understand student behavior; and, to learn how to diagnose students' educational needs.

In the domain of mastery of one's discipline, the following aims were mentioned in one form or another: to update knowledge in one's own area of specialization; to raise faculty members' understanding of the subject they teach; and to increase knowledge of fields related to one's own teaching specialty.

As for organizational setting, some examples of faculty development aims are: to provide understanding of conditions of employment; to provide opportunities for knowing and understanding goals and objectives of the institution; to provide knowledge and understanding about the relationship of the institution to the total system of higher education; to provide knowledge and understanding about the total education program of the institution and the role and expectation of each kind or type; to provide opportunities

for discussion of concerns and problems that arise; to provide opportunities for involvement in the development of short and long-range objectives of institutions in ways which stimulate individuals to commit themselves to goals of the institution; to learn about community services and human resources available to the college; to effectively implement new academic programs; to raise faculty understanding and interest in local goals, students, and professional roles; to help professionals reduce personal obstacles to teaching effectiveness and strengthen opportunities for personal and professional advancements related to teaching; to create an organizational setting conducive to and supportive of teaching improvement; to increase administrative ability to stimulate, facilitate, and supervise teaching improvement; and to know and understand methods and procedures of accountability.

The domain of personal development includes such faculty development aims as to improve interpersonal skills; to learn how to use one's own leisure time; to learn how to develop life planning for personal growth; and to provide opportunities for discussing relationships of individual goals to institutional goals.

Methods of Faculty Development

A variety of methods are being used in faculty development programs. They seem to differ from place to place and also from time to time depending upon the type of institution clients. However, faculty development methods outlined by Bergquist and Phillips (1975), Lhota (1976), Centra (1978) and Konrad (1983) are comprehensive. They can be categorized as follows: professional workshops; conferences, seminars and presentations; analysis and evaluation practices; consultation and counseling; instructional technology; and miscellaneous.

The domain of workshops, conferences, seminars and presentations includes practices which emphasize: exploring various methods or techniques of instruction; reviewing subject matter or introduce new knowledge in a field; new or different approaches to curriculum development; testing and evaluating student performance; acquainting faculty with goals of the institution and types of students enrolled; helping faculty improve their academic advising and counseling skills; improving faculty members' research and scholarship skills; improving the management of departmental operations; exploring general issues or trends in education; and faculty affective development such as those aiming at improving interpersonal skills and exploring educational values.

The following activities are under the domain of analysis and evaluation practices: systematic ratings of instruction by students used to help faculty members improve their performance; formal assessments by colleagues for teaching or course improvement; informal assessment by colleagues for teaching or course improvement; systematic teaching or course evaluations by an administrator for improvement purposes; system for faculty to assess their own strengths and areas needing improvement; classroom visitation by an instructional resource person, upon request; followed by a diagnosis of teaching; and analysis of in-class video tapes to improve instruction.

In terms of consultation and counseling, the following practices are suggested: faculty with expertise consult with other faculty; personal counseling provided for individual faculty members; master teachers or senior faculty work closely with new teachers; and specialists from outside consult with individual faculty members;

As for instructional technology, these are mentioned as faculty development methods: assistance to faculty in the use of instructional technology; simulated procedures; special professional library; and circulation of newsletters, articles, etc.

Miscellaneous practices include: visitations to other institutions; faculty exchange programs with other institutions; and taking courses offered by colleagues.

Organizational Arrangements for Faculty Development

Organizational arrangements for faculty development mentioned in the literature represent factors relating to the effectiveness of faculty development programs. Some of these factors include degree of faculty involvement, location of activities, incentives for faculty involvement, faculty development centers, and faculty development personnel. These factors need to be considered in designing effective faculty development programs.

Faculty involvement. The literature in general reveals a concern about lack of faculty involvement in planning and implementing faculty development programs. Gaff (1975) and Weleschuk (1977) suggest that faculty members should be included in planning and implementing faculty development programs through faculty committees. Garrison (1975:2) also supports the idea of a faculty committee approach to planning and coordinating faculty development:

All inservice programs should be faculty-oriented, faculty-developed, and--to whatever extent possible--faculty administered.

O'Banion (1972:103) points out that if faculty development is to be effective, one administrator should assume major responsibility for coordinating the program of faculty development. In addition, he suggests that administrators should help each staff member develop an individualized development plan.

Location and timing of activities. A home campus or a nearby college or university are considered as the preferred site of faculty development activities (American Association of Junior Colleges, 1969; and Hodgson, 1970). However, Weleschuk (1977) found that staff development activities located off campus, at a neighboring college, or at community facilities are more in demand than those of home college location.

In terms of timing for faculty development activities, Weleschuk (1977) maintained that intersession periods are the most preferable.

Incentives. Kilpatrick (1967) recommends that salary, expenses, and credits be allowed for faculty members who participate in faculty development programs. He suggests that incentives such as salary increments for units of inservice work completed be provided. Other forms of incentives include such provisions as release time, sabbaticals, and payment for specialist consultants who work with staff members (Wetzler, 1970).

Faculty development personnel. A number of writers have suggested the position of faculty development officer or coordinator for effective faculty development programs. O'Banion (1972:95) maintains that if faculty development is to be more than a one-day presession orientation, followed by occasional outside speakers during the year, then faculty

development personnel need to be employed. Gaff (1975:112) points out that this position has been established in many institutions of higher education.

Needs Assessment

The term need has many different meanings. Bell (1977) points out that, historically, need was often defined as a personal assessment such as a felt difficulty. Present research in both social sciences and medical sciences leans more towards defining a need as a lack of something which is required for the survival and the well-being of the unit under study. However, both of these definitions are extremely hard to operationalize, and it is easy to become entangled in disagreement over the meaning of such abstractions as "felt," "difficulty," "survival," "well-being," and "require."

Other theoreticians, such as Hays and Linn (1977), and Kaufman and English (1975), see need as the gap between what an individual can do and what someone in authority decides that person should be able to do. This definition appears to be seriously lacking in that it excludes completely the needs as personally perceived by an individual.

Taba (1962:286) attempts to clarify the confusion surrounding the definition of need as she defines the term as "the gap between the present state of an individual and the desired objectives." Despite its simplistic nature,

this definition of need is also adopted by writers such as McKay (1977), Stake and Gooler (1971), and Boone, et al. (1977).

Needs Assessment and Faculty Development

Relating to faculty development, Boone, et al. (1977) contend that the primary purpose of needs assessment is to determine the specific nature of faculty needs in order to design a program which will meet these needs. Anderson and North (1978) suggest that if the objective of faculty development effort is to have a broad impact upon the institution, then a wide variety of opinions in terms of needs as perceived by individual faculty members should be considered. This notion is shared by other writers such as Gray (1978), Rives, et al. (1979), Lutz (1975), and Spitzer (1979). Administrators' perceptions of faculty development needs are also important since faculty development activities inevitably require their leadership and supervision.

Methods of Needs Assessment

Data for identifying the need for faculty development can be procured in several ways. McKay (1977) suggests the following: (1) administrative determination, (2) direct observations, (3) personal interviews, (4) delphi procedures, and (5) survey techniques.

According to McKay (1977) disadvantages of the first method are evident as it fails to reveal the needs of individual faculty members. The second and the third have the advantages of gaining information, but they require trained personnel and a great deal of time. Nominal group and delphi techniques enable small groups to develop a prioritized list of faculty development needs, but require extra training and a feeling of trust among the group members in order to achieve the openness needed for mutual sharing.

A well developed survey procedure seems to provide a good approach to identify faculty development needs. It is equal in reliability to the interview, usually easy to administer, and ensures the involvement of those for whom the faculty development program will be designed (Bohrnstadt, 1967). A further advantage of the survey method is that data can be gathered from a large diverse sample and that the anonymity of the respondents can be preserved.

McKay (1977:17) recommends this technique:

... for the information needed, expertise available, and time involved, . . . a survey was the best method to conduct our needs assessment. From that experience and studying what others have done, I would recommend the survey.

Mazmanian (1977) and Spitzer (1979) maintain that a survey method is the most commonly employed needs assessment methodology

Systems of Higher Education in Thailand

In this section the system of higher education in Thailand, including faculty development practices, is reviewed.

Historical Background

Higher education in Thailand may be traced to the nineteenth century (Kim, Zaidi, Guzman and Chomchai, 1980). The first school of medicine was established in Bangkok in 1889. Three years later the first teacher training school was founded. In 1910 the Royal Pages' School was set up to train selected young men to be government officials. This school was later expanded and became the first university of Thailand in 1916. During the period of some ten years after the political revolution that established a constitutional monarchy form of government in 1932, four more universities were created. All five were situated within Bangkok vicinity and were under supervision of various government ministries.

During the 1960s, university education was expanded to provincial areas outside of Bangkok (Taningkae, 1976). Three universities were established in the northern, northeastern, and southern regions of Thailand. Such expansion was still not adequate to meet the rising demand for higher education. Therefore, beginning in 1969, degree granting private colleges were approved. In addition,

"open admission" university was created in 1972. In 1974, the College of Education was upgraded into Srinakharinwirot University. By then, all ten universities and degree granting private colleges were under the supervision and coordination of the Office of University Affairs which was established in 1972 (Tapingkae, 1976). Also under the jurisdiction of this Office were three degree granting institutes of higher learning.

In addition to the institutions mentioned above, there are other institutions of higher education established for professional training in specialized areas. Among them are technical colleges, agriculture colleges, teacher training colleges, nursing colleges, and military and police academies (Ketudat, 1978). These types of institutions, however, are beyond the scope of this discussion.

Functions of Higher Education

Historically, the establishment of institutions of higher education in Thailand stemmed from manpower needs (Kim, Zaidi, Guzman and Chomchai, 1980). Manpower training as an essential function of higher education was emphasized even more with the implementation of the Five-Year National Economic and Social Development Plans, especially in the second Plan (1967-1971). Such an emphasis was also evident in the third and the fourth plans. At present, this function is generally stated in each university's Act.

Other functions of a university in Thailand are education, research, public service, and cultural preservation (Ketudat, 1978). Education as a function aims at the full development of human intellectual capacities to facilitate advancement of knowledge and technology. Research is commonly specified as a function of an institution of higher education. Although public service is not explicitly defined in the legislative enactment of most institutions, it has for a long time been recognized as an important function of a university in Thailand. Cultural preservation is another specified function of every university.

University Governance and Administration

Each university has its own establishment Act which empowers the university council to function as a governing body. Council members are drawn from categories specified by the Act (Ketudat, 1978). The majority of membership usually comes from ex officio administrative members: a president (who sometimes serves as a deputy chairman), vice presidents, deans, directors of centers/institutes, and, in some universities, representatives from faculty members. Most council members who are outsiders are appointed on the basis of personal merit.

Under the council, a president as chief executive officer is responsible for institutional administration

This responsibility includes supervision of deans of faculties, directors of centers/institutes, and other administrative officers. A dean supervises all department chairmen in the faculty. He also chairs the faculty board which acts as an executive body for academic matters and an advisory body on other matters affecting the faculty.

The formal channel for staff participation in university governance is through a faculty committee or faculty senate (Ketudat, 1978). Members of this type of committee are elected from academic staff. A faculty committee acts as an advisory and consultative body to the president on such matters as academic standards, policies, and student affairs. The other channels for staff participation are other standing committees on academic affairs, faculty affairs, and student affairs.

Selection and Promotion of Academic Staff

A candidate for any vacant position is selected by an ad hoc committee. Applicants for the position are interviewed by a selection committee of this type which then recommends the successful candidate to the president for appointment. After an initial probationary period of six months, a performance review of the new recruit is made by another committee. Upon favorable recommendation, permanent status is conferred. The initial appointment is generally at the lecturer level except for a specialist or those with

higher rank transferred from another university (Ketudat, 1978).

Academic rank of faculty members in Thai universities is similar to that of universities elsewhere. Full professor is the highest rank, followed by associate professor, assistant professor, and lecturer or instructor. Conditions for promotion to higher academic rank (i.e., from lecturer to assistant professor) include length of service, degree qualification, research, as well as academic publications. In practice, however, publications is the main criterion for academic rank promotion. The higher the rank, the more rigorous the academic and research standards required for promotion (Ketudat, 1978).

Faculty Development in Thai Universities

Some activities of faculty development such as professional conferences and scholarships for teaching staff to pursue their study abroad at higher levels have been common in Thai universities for sometime. However, the word "faculty development" was first recognized in some universities about ten years ago (Ketudat, 1978). Like faculty development in North American universities, practices of faculty development have been intensified in the last ten years. In the Fourth and the Fifth Five-Year Plans for National Economic and Social Development (1977-1981 and 1982-1986), upgrading teaching staff and

instruction improvement as the plan for improvement of higher education were clearly specified (Ketudat, 1978).

Quality of academic staff is one of the problems facing universities in Thailand. Ketudat and associates (1978:66) express their concern as follows:

The standard ratio of teaching staff of government universities holding doctoral, master's, and bachelor's degrees is 15:50:35. Based on this criterion, staff qualifications are still lower than minimum standard.

The alarming problem relating to low qualifications of teaching staff of universities has been well recognized. In 1967, the Cabinet approved the establishment of the University Development Commission (Ketudat, 1978). The main objective of the University Development Commission was to produce qualified teaching staff by utilizing domestic resources. A number of scholarships for master's and doctoral degrees were awarded to selected graduate students who agreed to be recruited, upon graduation, as academic staff of predetermined universities. The University Development Commission later extended its services to include such activities as organizing inter-university faculty member exchange programs, workshops on university teaching, seminars on teaching improvement in specific areas, and workshops on preparation of faculty development personnel. The University Development Commission also encouraged and provided assistance to individual universities to establish and conduct faculty development

programs. At present, most of the universities have their own faculty development programs emphasizing instructional improvement.

Summary

This chapter presented a summary of literature relating to faculty development in higher education in general and that specific to universities in Thailand. The information was used in the design of the study, in the development of questionnaire items, and in the discussion of the findings.

The first part of the chapter indicated that faculty members in colleges and universities need faculty development programs to help them acquire and maintain knowledge, skills and attitudes necessary to improve their performance. It also indicated that research on the need for faculty development among academic staff in institutions of higher learning is limited.

The literature on aims, methods and organizational arrangements of faculty development varied from one writer to another. However, the following elements seemed to be common among the writers. The primary aims of faculty development included instructional improvement, mastery of one's own discipline, organizational setting and personal development. Instructional evaluation, workshops, seminars, conferences, counseling and help of experts from both inside and outside the institution were common methods of faculty

development. In terms of organizational arrangements of faculty development, such factors as faculty involvement, location and timing of faculty development, incentives and faculty development personnel were mentioned as factors influencing effectiveness of faculty development programs.

Needs assessment by which the specific nature of faculty needs are determined is useful in designing effective faculty development programs. The literature suggests that the survey method is the most commonly employed needs assessment methodology. This method was used in the study.

The chapter concluded with a brief overview of systems of higher education in Thailand. Although this literature was not extensive, it provided background information useful for understanding the setting of the study. It included the need for, as well as the current practices of, faculty development in Thai universities.

CHAPTER 3

RESEARCH METHODOLOGY

This study was designed to ascertain the perception of faculty members and administrators of a selected university in Thailand regarding faculty development needs. In this chapter, the research methodology is discussed in terms of instrumentation, population and sampling technique, data collection and treatment of the data.

Instrumentation

Assessment Dimensions

Information on needs for faculty development can be collected by many types of assessment procedures. McKay (1979) groups these into five broad dimensions: (1) actual/preferred scale, (2) Likert scale, (3) faculty job description/role, (4) open ended questions, and (5) rank order of areas/categories of needs.

An actual/preferred scale is designed to measure how much emphasis is currently placed on certain concerns and how much emphasis should be placed on these concerns. A respondent is asked first to consider each item as it is presently related to the faculty development program and as it should be related toward faculty development. This type of questionnaire yields quantifiable data of the need/gaps, is easy to score, and provides good data for analysis.

and interpretation.

A Likert scale is a scale that allows the respondent to identify a position along a continuum that best represents his or her perception on a given item. In a needs assessment survey, the continuum may range from a perception of no need to one of a critical need on an item. Such a scale is easy to administer and score, but it may lack definitional precision in the response categories.

A faculty job description/role instrument delineates a set of roles to which a faculty member is assigned according to a detailed job description. Whenever a person does not have the skills or competencies to fulfill a required role or a portion of the job description, a need is identified. This method may be difficult to employ for faculty members already on the job.

Open-ended questions provide the faculty a chance to respond to questions about areas of needs. This method has a lot of disadvantages in categorizing responses, but it allows for individuals to be very specific about their needs.

A rank ordering of areas/categories of needs can be performed rather rapidly and provide a good overview of the order/preference of needs. However, the listing has to be kept fairly short so that the number of items do not become unwieldy.

Needs Assessment Questionnaire

The needs assessment questionnaire used in this study was adapted from an instrument developed by Weleschuk (1977), and incorporated some items developed from the review of literature and others suggested by a panel of experts. It was firstly developed in English and then translated into Thai. Only the Thai version of the questionnaire was used in data collection.

In order to ensure the validity of the English version of the questionnaire, the items were scrutinized by the researcher's thesis committee. Based on their suggestions, some items were rewritten or eliminated, and others were added.

The questionnaire was then translated into Thai. In order to maintain consistency between the English and the Thai versions, three graduate students from Thailand who were studying at the University of Alberta were requested to translate the Thai version of the questionnaire back to English without a previous review of the original English version. No discrepancies were found between the original English version of the questionnaire and the Thai version.

The validation of the Thai questionnaire employed a procedure similar to the one used in the development of the English version. In this case, a Thai expert, who is a professor at the University of Alberta, was requested to scrutinize the questionnaire items. Based on his

suggestions, the questionnaire was revised for greater clarity.

The questionnaire consisted of five sections:

Section I. This section asked personal data of the respondents. The information was used to classify the respondents according to location of assignment (campus), position (faculty member or administrator), academic qualification, length of experience at a selected university in Thailand, and previous work experience. These data were used to describe the characteristics of the sample.

Section II. This section consisted of the aims of faculty development. There were 67 items on the list.

For each item, respondents were asked to circle a number on a one to five Likert-type scale to indicate their perception of the importance of the aim for their own development. The numbers on the scale corresponded to the following levels of perceived need:

1=no need, 2=limited need, 3=moderate need,

4=considerable need, and 5=great need.

Section III. Section III consisted of the methods of acquiring the content, knowledge, or skills specified in the aims in Section II. The list contained 31 items.

For each item, respondents were asked to circle two numbers indicating (1) the emphasis which was currently given to each method of faculty development at their campus and (2) the degree of emphasis that respondents would prefer.

to have assigned to it. Similarly to the scale in Section II, the numbers on a one to five Likert-type scale corresponded to the following rating:

1=no emphasis, 2=limited emphasis, 3=moderate emphasis,
4=considerable emphasis, and 5=great emphasis.

Section IV. This section consisted of organizational arrangements which had an impact upon the effectiveness of a staff development program. The aspects of organizational arrangements included in this section dealt with timing, location, personnel, experts, and incentives. Each of these categories contained four to ten items. For each item, the actual and preferred perceptions were rated on a five-point scale similar to the one in section III. The numbers on the scale corresponded to the following rating:

1=none or very limited extent, 2=some extent,
3=moderate extent, 4=large extent, and
5=very large extent.

Section V. This section contained four open-ended questions relating to the respondents' previous faculty development experience, felt needs, recurring problems related to staff performance, and plans for further professional development.

Population and Sampling Technique

Full-time faculty members and administrators of a selected university in Thailand were chosen as the population of this study. This university is a multicampus university comprising eight campuses, four located in vicinity of one metropolitan area and the rest in other cities in the eastern, northern, northeastern and southern regions of the nation. Included in this study were only the four campuses located in the metropolitan area.

Generally, all four campuses in the study are similar in that they all produce graduates with pedagogical degrees. Except for campus #1, their administrative structures are the same. However, some distinctions among these campuses are worth mentioning. Campus #1, the main campus, is the oldest and the largest campus. It is the administrative center of the university, housing the offices of the president who is the top executive officer of the whole university, and of the deans of faculties who are in charge of the overall operation of the faculties. For each of the other three satellite campuses, the vice-president is the top executive officer, while associate deans are in charge of campus faculties. Campus #2, the second oldest, caters primarily to students directly from high school without any form of pedagogical training. Campus #3, and campus #4 are later additions to the university admitting mostly students with previous pedagogical training. Campus #4 specializes

in physical education. Prior to becoming a campus of the university, it was a college of physical education.

The president of the university whose office was at the main campus, and three vice-presidents who were the top ranking administrators of the other three campuses, were contacted for permission to conduct the study.

The list of all 1981-82 faculty members and administrators of the four campuses of the university under study was used to select a stratified random sample of respondents. The sample consisted of approximately twenty percent of the full-time faculty members and fifty percent of full-time administrators selected by random procedures.

Data Collection

For the purpose of data collection, a reliable representative in Thailand was requested to act on behalf of the researcher. The researcher was not able to administer the questionnaire personally as his attempts to secure financial assistance for travel were not successful. The representative chosen to administer the data collection was an associate professor in the Faculty of Education at the university under study. His responsibilities included the duplication of copies of the questionnaire and cover letter, distribution and collection of the completed questionnaires from the random sample, follow up contacts with those who had not responded and, finally shipment of the completed

questionnaires to the researcher in Canada.

A group of people selected by the researcher's representative personally delivered a packet of materials to each respondent on June 7, 1982. The questionnaires were picked up on the first round on June 25, 1982, and on the final round on June 30, 1982.

Table 1 summarizes the distribution and returns of the questionnaires. The table indicates that of 201 potential respondents a total of 128 (63.7 percent) usable questionnaires were returned.

Table 3.1
Summary of Questionnaires Distributed and Returned

Campus	No. of Quest. Sent	No. of Usable Quest.	Percent Returns
Campus #1	90	47	52.2
Campus #2	40	25	62.5
Campus #3	40	31	77.5
Campus #4	31	25	80.1
Total	201	128	63.7

Treatment of Data

The data from the questionnaires were examined, coded and transferred to computer cards for analysis. The data were classified according to the following independent variables: position, campus, faculty, academic rank,

qualification, years of experience at the university, and most recent full-time job.

Position of the respondent refers to faculty member or administrator; campus refers to four metropolitan campuses of the eight campuses that make up the university; faculty comprises Education, Sciences, Social Sciences or Humanities; academic rank ranges from lecturer to full professor; qualification in terms of highest earned degree refers to bachelor's, master's or doctoral degree; number of years of experience at the university under study ranges from 5 years or less to 16 years or more; and most recent full-time job refers to type of previous experience which includes no experience, noneducational, elementary or secondary school teaching, and teaching in an institution of higher learning.

The FREQUENCIES procedure (Nie, et al., 1975:194-202) was used to calculate frequencies, percentage-distribution and means. The mean scores for the aims were used to indicate the degree of need regarding each of the faculty development aims.

A special computer program was written to calculate the demand score which was used to establish the respondent's perceived need for the methods and organizational arrangements in faculty development. The procedure for calculating the demand score for each item of the methods and organizational arrangements was preferred score (PS)

minus actual score (AS) plus five, to eliminate any negative scores. The highest possible demand score could have been nine indicating a great need, while the demand score of five would indicate no demand. A demand score of less than five would suggest that there was a perceived excess of provision for a given method of faculty development or organizational arrangement. For analytical purposes, a mean demand score (MDS) was computed from the individual demand scores.

The t-test procedure (Nie, et al., 1975:267-275) was used to determine if there were any statistically significant differences between mean scores (MS) or between mean demand scores (MDS) of subgroup pairs. For this test a significance level of .05 was chosen.

Where there were three or more groups, the one-way analysis of variance, ANOVA, (Nie, et al., 1975:257-261) was used to establish the statistical significance of differences among mean scores or mean demand scores. For the ANOVA test, a significance level of .05 was chosen to examine the differences among groups. The Scheffe' test was used to determine the location and direction of the differences among groups. In view of the rigor of this test (Ferguson, 1971), the significance level for the Scheffe' was set at .10.

Summary

In this chapter, the design and development of the instrument used in data collection, the characteristics of the population, the sampling technique, and the procedures of data collection and treatment were described.

The instrument used was a need assessment questionnaire asking perceptions on faculty development aims, faculty development methods, organizational arrangements for faculty development, and general questions relating to faculty development. The questionnaire was firstly developed in English and then translated into Thai. Only the Thai version of questionnaire was used in data collection.

The sample of this study was randomly selected from a list of 1981-1982 full-time academic staff who were working at four metropolitan campuses of a selected university in Thailand. The data collection was conducted on the researcher's behalf by a reliable representative in Thailand. Of 201 questionnaires distributed, 128 (63.7 %) returned questionnaires were usable.

The data from the questionnaires were examined, coded and transferred to computer for analysis. They were analyzed using frequencies procedure to calculate frequencies, percentage distribution, and mean scores; t-test procedure; ANOVA; and the Scheffe' test. In addition, a special computer program was written to calculate mean demand scores.

CHAPTER 4

THE FINDINGS AND DISCUSSION

In this chapter, the results of data analysis are reported. A profile of respondents describes characteristics of the respondents in terms of position, campus, faculty, academic rank, qualification, number of years of experience at the university under study, and type of previous full-time job. Following the profile of the respondents, the findings relative to aims, methods and organizational arrangements of faculty development are discussed. The data analysis addresses each of the sub-problems outlined in Chapter 1. A summary of the findings is presented at the end of the chapter.

Profile of the Sample

The data for this study were provided by 128 respondents. The sample was randomly selected from the population consisting of full-time faculty members and administrators of four campuses of a selected university in a metropolitan area of Thailand. The characteristics of the respondents are summarized in Table 4.1.

Table 4.1

**Percentage Distribution of Characteristics
of Respondents in the Total Sample
(N=128)**

Characteristics	Number	Percent
Position		
Faculty member	89	69.6
Administrator	39	30.4
Total	128	100.0
Campus		
Campus #1	47	36.7
Campus #2	25	19.5
Campus #3	31	24.2
Campus #4	25	19.5
Total	128	100.0
Faculty		
Education	30	23.4
Sciences	31	24.2
Social Sciences	23	18.0
Humanities	31	24.2
Not specified	13	10.2
Total	128	100.0
Academic rank		
Lecturer	71	55.5
Assistant professor	46	35.9
Associate professor	9	7.0
Professor	1	0.8
Not specified	1	0.8
Total	128	100.0
Qualification		
Bachelor's degree	13	10.1
Master's degree	106	82.8
Doctoral degree	8	6.3
Not specified	1	0.8
Total	128	100.0

Table 4.1 (continued)

Characteristics		Number	Percent
Experience at the university			
5 years or less		24	18.8
6 to 10 years.		50	39.1
11 to 15 years		31	24.2
16 years or more		23	17.9
	Total	128	100.0
Most Recent Full-Time Job			
None		10	7.8
Non-educational fields		20	15.6
Elem. or Sec. schools		22	17.2
Higher education		11	8.6
Not responded		65	50.8
	Total	128	100.0

The majority of the respondents (69.6 %) were faculty members, while the remainder (30.4 %) held administrative positions, including department heads, associate deans, and vice presidents.

Of the total number of respondents, 47 or 36.7 percent were working at campus #1, which is the main campus; 25 or 19.5 percent at campus #2; 31 or 24.2 percent at campus #3; and 25 or 19.5 percent at campus #4.

Thirty respondents or 23.4 percent worked in the Faculty of Education; 31 or 24.2 percent in the Faculty of Sciences; 23 or 18.0 percent in the Faculty of Social Sciences; 31 or 24.2 percent in the Faculty of Humanities; and 12 or 9.4 percent in other faculties, including the Faculty of Graduate Studies, the Center for Child

Development Research, and central offices.

In terms of academic rank, the majority (55.5%) were lecturers while 35.9 percent were assistant professors, 7 percent associate professors, and only one respondent was a full professor.

Most respondents (82.8 %) held master's degrees, while 10.1 and 6.3 percent held bachelor's and doctoral degrees, respectively.

In terms of number of years of experience at the university under study, 18.8 percent fell into the category of five years or less; 39.1 percent of six to ten years; 24.2 percent of 11 to 15 years. The remaining 17.9 percent had worked there for 16 years or longer.

Only 49.2 percent of the respondents answered whether or not they had full-time work prior to the assignment at the selected university in Thailand. Among those who did, 20 indicated that they had worked in noneducational professions. Only 11 had experience in higher education, while 22 had worked in elementary or secondary schools.

The characteristics of the faculty members and the administrators of a selected university in Thailand revealed some interesting findings. The largest number of respondents were on the main campus of the university. Almost one-fourth of the respondents were in Education, Sciences, and Humanities, with less than one-fifth in Social Sciences. Over half held an academic rank of lecturer;

four-fifth had a master's degree; and a majority had been working at the university under study for a period of ten years or less. Of those who specified previous experience, the largest number had worked in elementary or secondary schools.

Aims of Faculty Development

Sub-problem 1: What are the perceptions regarding the aims of faculty development?

The findings relative to the perceptions of the total sample regarding sixty-seven aims of faculty development are presented in the following manner: degree of need, categorization of degree of need, aims of high need, and aims of low need.

Degree of Need

Mean scores (MS) were used to determine degree of need for faculty development aims. In order to compare the degree of needs among the aims, the mean scores were ranked from the highest to the lowest. The highest mean score suggests the highest degree of need while the lowest mean score suggests the lowest degree of need. The mean scores and rank order of the aims of faculty development perceived by the total sample are presented in Table 6.1, Appendix B (p. 192). The table shows an average mean score of 3.58 for all aims, which indicates a somewhat stronger than a

moderate need. In general, these aims were perceived as appropriate for faculty development programs in the university under study.

Categorization of Degree of Need

The faculty development aims were categorized in terms of degree of need. They were grouped according to the mean scores into four categories of approximate quartiles. The first group consisted of aims that were categorized as high need while the last category represented aims that were perceived to be of low need. In between groups represented fairly high and moderate needs.

Table 4.2 exhibits categories of degree of need. There were seventeen aims categorized as high need (3.80-4.55), eighteen aims as fairly high need (3.54-3.79), sixteen aims as moderate need (3.35-3.53), and sixteen aims as low need (2.32-3.34).

Table 4.2

Categorization of Degree of Need for the Aims
of Faculty Development by the Total Sample
(N=128)

Degree of Needs	Mean Score Range	Number in Category	Range of Ranks
High	3.80-4.55	17	1 - 17
Fairly High	3.54-3.79	18	18 - 35
Moderate	3.35-3.53	16	35 - 52
Low	2.32-3.34	16	53 - 67

Aims of High Need

Seventeen aims which were categorized as having high mean scores are listed in Table 4.3. The aim which had the highest mean score (4.58) was to increase knowledge in fields related to one's own teaching specialty. It was followed by the aim referring to updating knowledge in one's own area of specialization (4.45), and to learning how to use self-evaluation techniques to improve teaching performance (4.21).

Most of the aims receiving a high rating were related to instructional improvement and personal development. It can be inferred from these findings that instructional improvement is considered to be one of the most important components of faculty development.

Table 4.3

**Faculty Development Aims Receiving High Mean Scores
by Total Sample
(N=128)**

Item No.	Aim	Mean Score	Rank
14.	To increase knowledge of fields related to one's own teaching specialty.	4.58	1
20.	To update knowledge in own area of specialization.	4.45	2
15.	To learn how to use self-evaluation techniques to improve teaching performance.	4.21	3
2.	To develop knowledge and skills in human relations.	4.16	4
16.	To develop an awareness of one's responsibility towards colleagues and professional associations.	4.11	5
10.	To learn to integrate content activities with other courses.	4.04	6
67.	To learn to use techniques other than verbal in teaching.	3.96	7
48.	To conduct research related to the instructor's own course and teaching.	3.94	8
56.	To learn about educational innovation in higher education	3.93	9
3	To learn about this institution's problems related to implementation of instructional programs..	3.86	10
55	To improve discussion techniques in teaching.	3.85	11

Table 4.3 (continued)

Item No.	Aim	Mean Score	Rank
63.	To develop skill in making learning relevant for students.	3.84	12
19.	To develop communication practices which encourage good public relations.	3.83	13
11.	To improve skills in using audio-visual equipment and materials.	3.81	14
18.	To improve own performance to meet expectations of students, parents and public.	3.80	16
21.	To develop good working relationships with colleagues.	3.80	16
31.	To learn ways of reinforcing learning.	3.80	16

Aims of Low Need

Table 4.4 lists sixteen aims which had low mean scores.

Among the sixteen aims categorized as low need, the one that received the lowest rating (2.32) was to acquire the knowledge of the history of the university. The second and the third lowest rated aims were to know the characteristics of the student body of one's own campus (2.92) and to learn how to use one's leisure time (3.08), respectively. In general, most of the aims receiving low ratings were those relating to student needs and university setting. Low ratings for these two areas suggest that fairly adequate attention is already given to these areas or that

Table 4.4

Faculty Development Aims Receiving Low Mean Scores
by Total Sample
(N=128)

Item No.	Aim	Mean Score	Rank
23.	To understand the role of the academic staff in this campus.	3.34	53
37.	To learn about political and socio-economic factors influencing this campus.	3.34	53
40.	To develop a commitment to the goals of the university.	3.34	53
9.	To learn the psychology of the adult student.	3.33	55.5
65.	To develop skills in using games and stimulation in teaching.	3.33	55.5
43.	To develop a sensitivity for students' emotional and social needs.	3.32	57.5
50.	To learn about the operation and function of the university's educational media (includes library).	3.32	57.5
54.	To learn about grouping students for instruction.	3.30	59
49	To learn to write programmed course units.	3.27	60
45	To understand theories of social organizations.	3.23	61.5
51.	To learn about the functions of administration in this campus.	3.23	61.5

Table 4.4 (continued)

Item No.	Aim	Mean Score	Rank
44.	To learn about accepted policies regarding student admissions and attendance.	3.18	63
33.	To learn about youth culture.	3.11	64
38.	To learn how to use one's leisure time.	3.08	65
60.	To know the characteristics of this campus' student body.	2.92	66
5.	To acquire a knowledge of the history of this university.	2.32	67

the respondents did not consider them to be important.

It is worth noting that even though sixteen aims were categorized as low need, only two of them had mean scores lower than 3.00 which was classified as a moderate need on the one-to-five Likert-type scale. These findings suggest that all of the aims listed in the questionnaire were appropriate for faculty development programs at this university. Another interesting finding was that the aim receiving the lowest rating had a mean score which was much lower than that of the aim receiving the second lowest rating. Ranking of acquisition of knowledge of the history of the university as the last item could be interpreted that the respondents were either fully knowledgeable about the university setting or simply viewed it to be less important than all other aims.

Methods of Faculty Development

Sub-problem 2: What are the perceptions regarding the methods of faculty development?

The perceptions of the total sample regarding the thirty-one methods of faculty development are presented in this section. This presentation comprises perceptions of actual practices, preferred practices, degree of need, categorization of degree of need, and methods of high and low needs.

Actual Practices

The extent to which the methods of faculty development were actually practiced was determined by their mean scores. Table 6.2, Appendix B (p. 198), presents mean scores and a rank order of faculty development methods actually practiced as perceived by all respondents.

The method perceived to be most commonly used was workshops or seminars dealing with curriculum development (2.30). It was followed by faculty exchange programs with other institutions (1.96). Two methods receiving the third highest mean score (1.95) were workshops, seminars, or short courses on subject matter; and workshops or programs on academic advising and counseling.

The method receiving the lowest rating was classroom visitation by an instructional resource person (1.26). The second and third lowest in the ranking were simulated

procedures (1.38), and formal assessments by colleagues (1.39), respectively:

The mean scores of the actual practice of the methods were very low, ranging from 1.26 to 2.30 on a five-point Likert-type scale. These low scores indicate a limited emphasis on faculty development in this university.

Preferred Practices

Table 6.3, Appendix B (p. 201), presents mean scores and a rank order of preferred faculty development methods as perceived by all respondents. Each mean score indicates degree of preference for that method, and the rank order provides a comparison of preference among these methods.

The method perceived to be the most preferable was workshops or seminars on research and scholarship skills (4.23). It was followed by workshops, seminars, or short courses on subject matter (4.13), and special professional library (4.02). Three methods receiving the lowest ratings were informal assessment by colleagues (3.27), systematic teaching or course evaluations by an administrator (3.22), and classroom visitation by an instructional resource person (3.10).

The mean scores for preferred practices were fairly high, ranging from 3.10 to 4.23. The respondents perceived that all the methods should receive greater emphasis than at present for faculty development activities.

Degree of Need

According to Mazmanian (1977), degree of need can be determined by the extent to which perceptions of preferred practices differ from those of actual practices. The wider the gap, the higher the degree of perceived need (see Figure 2, p. 9). In order to determine the degree of need for each method of faculty development, a demand score was computed by subtracting the actual score from the preferred score and adding five. Compiling the individual demand scores resulted in a mean demand score for each item. The highest possible mean demand score could have been nine, while a mean demand score of five would indicate no demand. A mean demand score of less than five would suggest that the provision of that particular method of faculty development exceeded the perceived need.

The mean demand scores and a rank order of all the methods of faculty development are presented in Table 6.4, Appendix B (p. 204). The difference between the mean demand score of the faculty development method receiving the lowest rating (6.69) and the one receiving the highest rating (7.36) was minimal. Since all methods had demand scores well over five, the need for them was clearly indicated.

Categorization of degree of need. Table 4.5 presents the mean demand scores of methods in four categories of approximate quartiles based upon the perceptions of all respondents. According to this categorization, eight methods were categorized as high need, seven as fairly high need, eight as moderate, and eight as low need.

Table 4.5

Categorization of Degree of Need for Methods of Faculty Development by the Total Sample (N=128)

Degree of Needs	Mean Demand Score Range	Number in Category	Range of Ranks
High	7.18-7.36	8	1 - 8
Fairly High	7.01-7.17	7	9 - 15
Moderate	6.85-7.00	8	16 - 23
Low	6.69-6.84	8	24 - 31

Methods of high need. Eight methods categorized as having high mean demand scores are listed in Table 4.6. The two methods which had the same highest mean demand scores (7.36) were workshops and seminars on research and scholarship skills, and visitations to other institutions. They were followed by professional and personal development plan (7.24). All eight methods that received high mean demand scores should have an important place in faculty development for the difference between the first (7.36) and the eighth (7.18) was minimal.

Table 4.6

Faculty Development Methods Receiving
High Mean Demand Score by Total Sample
(N=128)

Item No.	Method	MDS	Rank
7.	Workshops or seminars on research and scholarship skills.	7.36	1.5
27.	Visitations to other institutions.	7.36	1.5
20.	Professional and personal development plan.	7.24	3
8.	Workshops, seminars, or programs to improve the management of departmental operations.	7.23	4.5
19.	Senior teachers work closely with new teachers.	7.23	4.5
26.	Special professional library.	7.22	6
15.	System for faculty to assess themselves.	7.20	7
2.	Workshops, seminars, or short courses on subject matter.	7.18	8

Methods of low need. Table 4.7 lists eight methods of faculty development which had low mean demand scores. The method receiving the lowest rating (6.69) was workshops or seminars dealing with curriculum development. The second lowest method was faculty taking courses offered by colleagues (6.77). The ratings for these eight methods were almost homogeneous, and, because for all of them a fairly substantial demand was indicated, each of them could be considered as desirable for faculty development programs.

Table 4.7

**Faculty Development Methods Receiving
Low Mean Demand Scores by Total Sample
(N=128)**

Item No.	Method	MDS	Rank
13.	Informal assessment by colleagues.	6.84	25
16.	Classroom visitation by an instructional resource person.	6.84	25
30.	Personal counseling provided individual faculty members.	6.84	25
14.	Systematic teaching or course evaluations by an administrator.	6.80	27.5
28.	Faculty exchange programs with other institutions.	6.80	27.5
5.	Workshops, seminars, or programs on institutional goals and types of students.	6.79	29
29.	Faculty take courses offered by colleagues.	6.77	30
3.	Workshops or seminars dealing with curriculum development.	6.69	31

Discussion of Practices and Degree of Need

The findings indicated that there were limited practices of faculty development at the university, and that all thirty-one methods listed in the questionnaire should receive greater emphasis than at present. An analysis of degree of need using mean demand scores suggested that a demand for all the methods was expressed. In addition, a closer examination revealed that preferred practices and

degree of need were significantly correlated at .01 level ($r=.54$). It is advisable for administrators of the university to pay particular attention to highly needed methods.

Organizational Arrangements for Faculty Development

Sub-problem 3: What are the perceptions regarding the organizational arrangements for faculty development?

Findings related to this sub-problem are presented in terms of perceptions of the total sample regarding organizational arrangements for faculty development. This presentation comprises perceptions of actual practices, preferred practices, and degree of need.

Actual Practices

The extent to which all items of organizational arrangements for faculty development were practiced was determined by their mean scores. The mean scores of items of each aspect of organizational arrangements were ranked in order to compare the extent of actual practices among these items. Aspects of organizational arrangements were classified as:

1. timing, referring to time for faculty development activities;

2. location, referring to location for faculty development activities;
3. personnel, referring to person(s) assuming active responsibility for faculty development programs;
4. experts, referring to person(s) providing expertise for faculty development activities; and
5. incentives, referring to provisions encouraging participation of faculty development activities.

Mean scores in this section were used to ascertain the perceptions of existing arrangements for faculty development and to rank the items within each aspect of organizational arrangements. This procedure helped to determine the most and the least popular arrangements in each aspect. Table 6.5, Appendix B (p. 207), presents mean scores and a rank order of items of existing organizational arrangements perceived by respondents. Items in each aspect will be discussed in terms of the highest and the lowest ratings (Table 4.8).

Table 4.8

Organizational Arrangements Receiving
the Highest and the Lowest Ratings as Actual Practices

Aspect	Highest Rating		Lowest Rating	
	Item	MS	Item	MS
Timing	During the inter-session periods	1.90	During university term	1.62
Location	Campus #1	2.61	Campus #3	1.56
Personnel	Vice-President of own campus	2.48	Faculty committee at own campus	1.89
Expertise	Vice-President of own campus	2.20	Faculty committee at campus #1	1.78
Incentive	Sabbatical leave	3.12	Salary credit for completed program	1.44

Timing. Intersession periods were perceived as the periods of time during which faculty development activities were most frequently organized (1.90). The period of time used least frequently was during the university term (1.62). These findings are similar to the findings of Weleschuck (1977).

Location. Campus #1, the main campus, had the highest mean score in terms of location for faculty development activities (2.61). This finding seems logical because, of the four campuses under study, the main campus has the best resources available for faculty development activities. The last in the ranking was campus #4 (1.56). It should be noted here that campus #4 is different from the rest in that its primary specialization is in the field of physical education.

Personnel. The vice-president of one's own campus was rated the highest (2.48) as the person currently assuming greatest responsibility for faculty development programs.

It appears that only the top executive in each campus, vice-president, is actually responsible to a considerable extent in faculty development. Contrary to common practice elsewhere, faculty committee at one's own campus was ranked the last (1.89).

Experts. With regard to person(s) providing expertise for faculty development activities, vice-president at one's own campus received the highest rating (2.20). Faculty committee at one's own campus was rated the lowest (1.78). These findings concur with the findings in the preceding paragraph.

Incentives. Not surprisingly, sabbatical leaves were actually practiced most frequently (3.12). The item related to salary credit for completed programs of faculty development received the lowest rank in these ratings (1.44). The low rating of salary credit may relate to the finding in sub-problem 2 that there is currently only a limited practice of faculty development, or simply indicates that salary credit is not often awarded for completing programs in faculty development.

Preferred Practices

Table 6.6, Appendix B (p. 210), presents mean scores and a rank order of the items for each aspect of organizational arrangements as preferred by the respondents. Each mean score indicates degree of preference for that item, while rank order shows a comparison of the preferences among items in each aspect of organizational arrangements.

As in the previous section, items in each aspect of faculty development are discussed in terms of the highest and the lowest degree of preference (Table 4.9).

Table 4.9

Sub-Items of Organizational Arrangements Receiving the Highest and the Lowest Ratings as Preferred Practices

Aspect	Sub-Item	Highest Rating	MS	Lowest Rating	MS
				Sub-Item	
Timing	During the inter-session periods	3.61		During university term	2.94
Location	Neighboring univ.	3.98		Campus #4	2.8†
Personnel	President of the university	4.28		Faculty committee at own campus	3.47
Experts	Special. consult. from outside	4.10		Faculty committee at own campus	3.32
Incentive	Travel funds to attend profess. conferences	4.27†		Salary credit for completed program of faculty development	3.17

Timing. The most preferred time for faculty development activities was during intersession periods (3.61). The least preferable time was during the university

term (2.94).

Location. A neighboring university was the most preferable choice of location for faculty development activities (3.98). It appears that there is a strong preference for activities away from one's own campus. The least preferred location was campus #4, the physical education campus (2.81).

Personnel. The president of the university was the most preferred person for assuming responsibility for faculty development programs (4.28). It is interesting that the respondents preferred the highest executive for this purpose. This finding seems to relate to an earlier item where the vice-president (top executive of each satellite campus) was perceived actually to exercise responsibility for faculty development. Faculty committee at one's own campus was perceived to be the least preferred (3.47).

Experts: With regard to providing expertise for faculty development activities, specialist consultants from outside the university were placed at the top of the ranking (4.10). Once again, this finding demonstrates the preference for input from outside. Faculty committee at one's own campus received the lowest rating (3.32).

Incentives. Travel funds for attending professional conferences was ranked as the most preferred incentive (4.27). Salary credit for completed programs of faculty development was least preferred (3.17).

High preference for a neighboring university as a choice of location, specialist consultants from outside as persons providing expertise and travel funds as incentives may indicate that the existing resources within the university are either inadequate or inappropriate for the purposes of faculty development. At the same time, however, it should be noted that all of the items for organizational arrangements received fairly high ratings. Perhaps, indeed, respondents were prepared to accept whatever arrangements could be provided.

Degree of Need

Mean demand scores were also used to determine the degree of perceived need for improved organizational arrangements for faculty development. Rank order based on mean demand scores of items under each aspect were used to prioritize degree of need for improved organizational arrangements among all items. Mean demand scores and a rank order of all the items are listed in Table 6.7, Appendix B (p. 212). Table 6.7 contains items receiving the highest score. The items receiving the highest score of organizational

Table 4.10

Organizational Arrangements Receiving
the Highest and the Lowest Mean Demand Scores

Aspect	Highest Rating Item	MDS	Lowest Rating Item	MDS
Timing	During the inter-session periods	6.70	During university term	6.33
Location	Neighboring univ.	6.81	Campus #1	6.11
Personnel	Vice-President acad. affairs	6.98	Faculty committee at own campus	6.55
Expertise	Special. consult. from outside	7.08	Vice-President of own campus	6.34
Incentive	Travel grant to update knowledge	7.40	Sabbatical leave	6.09

Timing. The greatest need for improved time arrangements for faculty development activities was during intersession periods (6.70). During the university term arrangements were considered to need the least improvement (6.33).

Location The provision of faculty development activities at a neighboring university was regarded as most in need of improvement as choice of location (6.81). The lowest mean demand score for location related to campus #1, the main campus (6.11). Evidently, faculty development activities were developed more nearly as desired on the main campus than elsewhere.

Personnel The vice president in charge of academic affairs was rated as the person that needed more improvement than anyone else in the university committee to be put in contact

committee at one's own campus was perceived to need least improvement (6.55), although the mean demand score indicated a fair level of need for improvement here also.

Experts. With regard to providing expertise for faculty development activities, specialist consultants from outside the university received the highest mean demand score (7.08). Interestingly, vice-president at one's own campus received the lowest rating (6.52), indicating a lower need for improvement than others.

Incentives. Travel grants to refresh or update knowledge was given the first rank (7.40). Sabbatical leave provision, rated as the most frequent practice, was given the lowest rank in terms of degree of need (6.09). It appears that sabbatical leaves are sufficiently provided and thus were not perceived as in need of as much improvement as were the other items.

Discussion of Practices and Degree of Need

The findings indicated that there were limited practices of faculty development at the university. An analysis of degree of need using a mean demand score showed a certain degree of need for an organizational arrangement in each aspect. Closer examinations revealed that preferred practices and degree of need were significantly correlated at .01 level on the aspect of person(s) providing expertise for faculty development activities, and at .05 level on the

aspects of timing for faculty development activities and person(s) assuming active responsibility for faculty development programs.

Differences in Faculty Members' and Administrators' Perceptions

Sub-problem 4: What are differences between faculty members' and administrators' perceptions regarding the aims, methods and organizational arrangements of faculty development?

This section presents the findings relative to differences between faculty members' and administrators' perceptions regarding aims, methods, and organizational arrangements of faculty development. The findings are based on the statistical analysis of data from the usable questionnaires returned by 89 (69.6 %) faculty members and 39 (30.4 %) administrators.

Aims of Faculty Development

In order to determine whether there were any significant differences between faculty members' and administrators' perceptions regarding faculty development aims, a non-directional t test procedure was used with the significance level set at .05. Table 6 of Appendix B provides the results of the t test on all differences.

in mean scores of all faculty development aims by faculty members and administrators. No significant differences were found. The findings, therefore, suggest high homogeneity between faculty members' and administrators' perceptions of the importance of the faculty development aims.

Methods of Faculty Development

The *t*-test results determining differences between faculty members' and administrators' mean demand scores on all thirty-one faculty development methods are listed in Table 6.9, Appendix B (p. 222). The table shows similarity of the ratings by the two groups. Only one comparison indicated a statistical difference in mean demand score, at a significance level of .01. The method, workshops or seminars on student testing, was rated significantly higher by administrators than by faculty members.

Although this method did not fall into the category of highest need (see Table 4.6, p. 69), the significant difference in mean demand scores suggests that administrators perceived a greater need for improvement in this method than did the faculty members. None of the other differences reached statistical significance.

Organizational Arrangements for Faculty Development

In Table 6.10, Appendix B (p. 225), the *t*-test results determining differences in mean demand scores on all items of organizational arrangements are presented. It was found

that faculty members and administrators also perceived similar needs for organizational arrangements. Only one item was rated differently at a .01 level of significance. The administrators rated the item referring to any of the four campuses located in other cities as the location for faculty development activities significantly higher than did the faculty members. According to this finding, administrators were inclined to place greater emphasis on improving faculty development activities at a campus located in other cities than did faculty members.

Differences in Perception by Respondents' Characteristics

Sub-problem 5: How are the differences in perceptions regarding the aims, methods, and organizational arrangements of faculty development related to campus, faculty, academic rank, qualification, experience at the university under study, and most recent full-time job?

This section focusses on differences in perceptions of aims, methods and organizational arrangements of faculty development among respondents classified by campus, faculty, academic rank, qualification, number of years of experience at the university, and type of most recent full-time job.

For this purpose, the one-way analysis of variance (ANOVA) and the Scheffe' multiple comparison of means tests were used. The ANOVA test was used to determine whether there were any differences between mean scores (for aims only) or between mean demand scores (for methods or organizational arrangements) among groups. For this test the significance level was set at .05. The Scheffe' test was used to determine the location and direction of the differences among groups with the significance level set at 0.10.

Differences by Campus

The respondents in this study were drawn from four campuses of the university. These campuses are all located in a metropolotan city of Thailand.

Aims of faculty development. Table 6.11 of Appendix B (p. 228) lists the results of ANOVA and the Scheffe' tests determining differences in mean scores of all faculty development aims among respondents from the four campuses. The table shows that there were significant differences on only seven out of sixty-seven aims. Table 4.11 lists the aims on which respondents differed by campus.

The respondents from campus #4 rated the following aims significantly higher than did the respondents from campus #3: to learn about this institution's problems

Table 4.11

Faculty Development Aims Which Indicated Significant Differences by Campus

Item No.	Aim	Grp1*		Grp2*		Grp3*		Grp4*		ANOVA		Scheffé ($p \leq 0.10$)
		N=47	MS	N=25	MS	N=31	MS	N=25	MS	F	P	
1.	To understand the philosophy underlying this university	3.79	1.00	3.29	0.91	3.61	1.12	4.20	0.91	3.60	0.02	4>2
2.	To learn about this institution's problems related to implementation of instructional programs.	3.77	0.94	3.84	0.85	3.65	1.05	4.32	0.75	2.83	0.04	4>3
3.	To develop strategies for evaluating instructional objectives.	3.56	0.92	3.84	0.94	3.37	0.89	4.00	0.87	2.75	0.05	4>3
4.	To learn to write instructional objectives for programs, courses and topics.	3.33	1.28	3.52	0.92	3.19	1.11	4.04	0.84	3.18	0.03	4>3, 4>1
5.	To learn how to prepare independent study materials.	3.48	1.19	3.40	0.76	3.26	1.12	4.04	0.79	2.93	0.04	4>3
6.	To learn about educational innovation in higher education.	3.67	1.11	3.84	0.90	4.06	0.93	4.32	0.75	2.77	0.04	4>1
7.	To learn to prepare materials for programmed, multi-media approaches to teaching.	3.37	1.04	3.40	1.00	3.74	1.18	4.20	0.87	4.00	0.01	4>1, 4>2

Campus:

grp1* = Campus #1

grp2* = Campus #2

grp3* = Campus #3

grp4* = Campus #4

related to implementation of instructional programs; to develop strategies for evaluating instructional objectives; to learn to write instructional objectives; to learn how to use one's leisure time; and to learn how to prepare independent study materials.

The respondents from campus #4 rated two faculty development aims significantly higher than did their counterparts from campus #2. These aims were to understand the philosophy underlying the university; and to learn to prepare materials for programmed, multi-media approaches to teaching.

The respondents from campus #4 rated the following three aims significantly higher than did the group from campus #1: to learn to write instructional objectives for programs, course and topics; to learn about educational innovation in higher education; and to learn to prepare materials for programs, multi-media approaches to teaching.

According to these findings, all seven statistically significant differences among groups involved respondents from campus #4. Although there was no pattern in terms of modes of faculty development related to these aims, there was an indication that respondents on campus #4 perceived their need more strongly than did respondents on other campuses. It seems advisable, therefore, for planners of faculty development to approach this campus for initial activities of faculty development as these respondents would

probably be more receptive than their counterparts from the other campuses.

Methods of faculty development. The results of the ANOVA and the Scheffe' tests on all thirty-one faculty development methods rated by respondents from four campuses are listed in Table 6.12, Appendix B (p. 234). In Table 4.12, the twelve methods showing nineteen significant differences are presented.

Respondents from campus #3 rated the following methods of faculty development to have a significantly higher need for development than did the group from campus #2: workshops or presentations that explore various methods of instruction; workshops or seminars dealing with curriculum development; and workshops or seminars on research and scholarship skills.

The following methods were perceived by respondents from campus #4 to have a significantly higher need for development than by respondents from campus #2: workshops or seminars dealing with curriculum development; workshops or seminars on student testing; workshops or programs on academic advising and counseling; workshops or seminars on research and scholarship skills; workshops or programs on faculty affective development; systematic ratings of instruction by students; formal assessment by colleagues; systematic teaching or course evaluation by an

Campus:

Grp1* = Campus #1
 Grp3* = Campus #3

Grp2* = Campus #2
 Grp4* = Campus #4

administrator; classroom visitation by an instructional resource person; analysis of in-class videotape; faculty exchange programs with other institutions; personal counseling provided for individual faculty members; and circulation of newsletters, articles, etc.

Respondents from campus #1 rated the following methods as having a significantly higher mean demand scores than respondents from campus #2: workshops or seminars on research and scholarship skills; analysis of in-class video tape; faculty exchange programs with other institutions; and personal counseling provided for faculty members.

Of thirty-one methods, twelve comparisons by campus groups reached significant differences. Once again, respondents from campus #4 perceived a higher need for an increased emphasis on most of these methods than did the respondents from other campuses. This confirms the suggestion that campus #4 should be considered as an initial target group for faculty development programs.

Conversely, respondents from campus #2 expressed their perception of the emphasis on these twelve faculty development methods significantly lower than did the other groups, especially those representing campus #4. Lack of pedagogical training by students prior to enrolling at this campus could have affected the respondents' perceptions in that these methods may not have been regarded as appropriate by them.

Organizational arrangements. In Table 6.13, Appendix B (p. 237), the results of ANOVA and the Scheffe' tests of the thirty-one items relating to organizational arrangements are presented. The two items on which perceptions differed significantly by campus are shown in Table 4.13.

Respondents from campus #3 felt significantly more strongly than did their counterparts on campus #2 that the vice-president in charge of academic affairs should receive greater emphasis than at present as the person providing expertise for faculty development activities. On the item regarding salary credit for completed programs of faculty development as an incentive encouraging participation, respondents from campuses #4 and #3 perceived the need for increased emphasis here more significantly than did their counterparts from campus #1. Respondents from campus #4 also rated this item significantly higher than did the respondents from campus #2.

There was a high degree of similarity in the perceptions of the methods among the respondents by campus. Only two methods received significantly different ratings. For these two methods, it appears that the age of the campuses may have accounted for these differences. The older the campus the lower the expressed need for a change in the emphasis upon these organizational arrangements for faculty development.

Differences by Faculty

The respondents classified by faculty were: Faculty of Education, Faculty of Sciences, Faculty of Social Sciences, and Faculty of Humanities. The group labelled "Others," which included respondents from the Faculty of Graduate Studies, the Center for the Study of Child Development, and Central Offices, was excluded from the data analysis because it lacked commonalities among the respondents.

Aims of faculty development. Table 6.14 of Appendix B (p. 240) lists the results of the ANOVA and the Scheffe' tests of all faculty development aims among the four faculty groups. Table 4.14 lists the seventeen of the sixty-seven aims on which twenty-seven statistically significant differences of means were observed.

Respondents from the Faculty of Education rated the following aims significantly higher than did those from the Faculty of Sciences: to develop knowledge and skills in human relation; to develop communication skills for instructing in student opinion oriented programs; to learn how to conduct social science research; to learn how to structure learning experience (e.g., simple to complex); to learn ways of reinforcing learning; to learn how to construct instruments for evaluating students' progress; to learn how to prepare independent study materials; to learn theories of teaching and learning of adult students;

67.	To learn to use techniques other than verbal in teaching.	4.43	0.73	3.55	1.12	3.74	0.75	3.93	0.83	5.56	0.00	1>2, 1>3

Faculty:

Grp1* = Faculty of Education
 Grp3* = Faculty of Social Sciences
 Grp2* = Faculty of Sciences
 Grp4* = Faculty of Humanities

to learn the uses of group dynamics; to develop a sensitivity for students' emotional and social needs; to understand theories of social organizations; to learn about educational innovation in higher education; to develop skills in using game and stimulation in teaching; and to learn to use techniques other than verbal in teaching.

The following faculty development aims were rated by respondents from the Faculty of Education significantly higher than did their counterparts from the Faculty of Social Sciences: to understand the role of guidance and counseling services on one's own campus; to learn the uses of group dynamics; to learn about educational innovation in higher education; to develop skills in using game and stimulation in teaching; and to learn to use techniques other than verbal in teaching.

Respondents from the Faculty of Humanities rated the following faculty development aims significantly higher than those from the Faculty of Sciences: to develop communication skills for instruction in student-opinion oriented programs; to learn how to conduct social science research; to learn the uses of group dynamics; and to understand theories of social organizations.

The faculty development aims rated significantly higher by respondents from the Faculty of Social Sciences than by respondents from the Faculty of Sciences were: to understand the politics involved in education; to learn how to conduct

social science research; and to understand theories of social organizations.

In general, respondents from the Faculty of Education perceived these faculty development aims to be more important than did respondents from the Faculties of Sciences and Social Sciences. The higher need for faculty development expressed by Faculty of Education respondents than by other groups supports a similar finding by Ramaiah (1984) in his study of faculty development in a university in Malaysia. The same conclusion as his can be drawn about this finding, namely that the more the respondents have been exposed to teacher training, the greater their perception of the need for faculty development.

Another interesting finding was that the respondents from the Faculty of Sciences expressed a significant lower need for faculty development than did their counterparts from other faculties. These findings suggest a relationship between the nature of subject being taught and the perceived need for faculty development. Faculty members teaching in the sciences perceived less need for faculty development than those teaching in other areas, particularly education. Perhaps they were less aware of the potential improvement that could result from faculty development activities than were their colleagues in other faculties.

Methods of faculty development: The results of ANOVA and the Scheffe' tests of all thirty-one faculty development methods perceived by respondents of four faculty groups are listed in Table 6.15, Appendix B (p. 246). Two methods which showed significant differences in mean demand scores are presented in Table 4.15.

The faculty development method referring to workshops or seminars on student testing had a mean demand score rated by respondents from the Faculty of Education significantly higher than by the Faculty of Humanities, while the method regarding workshops or programs on faculty affective development was rated by respondents from the Faculty of Education significantly higher than by their counterparts from the Faculty of Sciences.

There was a high degree of consensus among respondents by faculty regarding the appropriate emphasis on methods of faculty development. Once again, it was respondents from the Faculty of Education who perceived that two methods should receive significantly greater emphasis than at present than did their counterparts from other faculties.

Table 4.15
**Faculty Development Methods Which Indicated
 Significant Differences by Faculty**

 Grp3* = Faculty of Social Sciences

Grp2* = Faculty of Sciences
 Grp4* = Faculty of Humanities

Organizational arrangements. Table 6.16, Appendix B (p. 249), presents the results of ANOVA and the Scheffe' tests of all items of organizational arrangements among respondents classified by faculty. Table 4.16 lists the thirteen items which showed sixteen significant differences in mean demand scores.

Under the aspects of preferable time for faculty development activities, respondents from the Faculty of Education perceived a significantly higher need for an increased use of intersession periods for faculty development than did the Faculty of Humanities.

As for an increased use of locations for faculty development activities above present usage, the Faculty of Social Sciences rated campus #3 significantly higher than did their counterparts from the Faculty of Sciences, and respondents from the Faculties of Social Sciences and Education rated campus #4 significantly higher than did the Faculty of Sciences.

The respondents from the Faculty of Sciences and the Faculty of Social Sciences, respectively, rated two items, the vice-president in charge of academic affairs and the dean of one's own faculty as persons assuming responsibility for faculty development programs significantly higher than did the Faculty of Humanities.

Faculty:

Grp1* = Faculty of Education
 Grp2* = Faculty of Sciences
 Grp3* = Faculty of Social Sciences
 Grp4* = Faculty of Humanities

Under the aspect of personnel or person(s) providing expertise for faculty development activities, respondents from the Faculties of Social Sciences, Sciences and Education, respectively, rated three items, the vice-president in charge of academic affairs, a dean of one's own faculty, and a department head of one's own department significantly higher than did the group from the Faculty of Humanities. In addition, the respondents from the Faculties of Social Sciences and Education also preferred a significantly greater extent of involvement in faculty development programs than at present by the dean of one's own faculty and the faculty development officer than did the respondents from the Faculty of Humanities. However, the Faculty of Humanities rated three items related to incentives significantly higher than did their counterparts in the Faculty of Sciences: temporary teaching load reduction, travel grants to updating knowledge, and travel funds to attend professional conferences.

It appears that respondents from the Faculties of Humanities and of Sciences perceived a significant lower need for change in selected organizational arrangements of faculty development than did the respondents from the other two faculties. As for the lower need expressed by the respondents from the Faculty of Sciences, the interpretation of the findings regarding faculty development aims can be applied here as well.

Differences by Academic Rank

The respondents were classified into three academic ranks: lecturers, assistant professors, and associate and full professors. Associate and full professors were grouped together because there was only one respondent whose academic rank was full professor.

Aims of faculty development. Table 6.17 of Appendix B (p. 252) lists the results of ANOVA and the Scheffe' tests of all faculty development aims among respondents classified by academic rank. A high degree of consensus on the importance of faculty development aims was observed by respondents by academic rank. The three aims which showed five significant differences are presented in Table 4.17.

Lecturers rated the following faculty development aims significantly higher than did associate and full professors: to increase knowledge of fields related to one's own teaching specialty; and to improve skills in using the lecture technique. They also rated improving skills in using the lecture technique statistically higher than did assistant professors.

Assistant professors rated two aims significantly higher than did associate and full professors: to increase knowledge of fields related to one's own teaching specialty; and to learn to use techniques other than verbal in teaching.

Table 4.17

Faculty Development Aims Which Indicated Significant Differences by Academic Rank

Item No.	Aim	Grp1* N=71				Grp2* N=46				Grp3* N=10				ANOVA F	P	Schaffee' (p≤0.10)
		MS	SD	MS	SD	MS	SD	MS	SD	MS	SD	MS	SD

Academic Rank:

rp1* = Lecturer

rp2* = Assistant professor

rp3* = Associate and full professor

For each of the three aims, indicating statistical differences, the group of highest academic rank, associate and full professor, expressed the lowest need.

Methods of faculty development. The results of ANOVA and the Scheffe' tests of all thirty-one faculty development methods by academic rank are listed in Table 6.18, Appendix B (p. 258). Table 4.18 shows eleven methods indicating nineteen significant differences among respondents. It also reveals significant differences on the overall ratings. The respondents with highest academic rank had an overall mean demand score significantly lower than did the other two groups.

Assistant professors perceived the need for a significantly greater emphasis than at present than did associate and full professors on the following eleven methods: workshops or presentations that explore various methods of instruction; workshops, seminars, or short courses on subject matter; workshops or seminars on student testing; workshops, seminars, or programs to improve the management of departmental operations; workshops or presentations that explore general issues or trends in education; formal assessments by colleagues; system for faculty to assess themselves; specialists on campus to assist faculty in use of audiovisual aids; assistance to faculty in use of instructional technology; simulated procedures; and visitations to other institutions.

Table 4.18

Situations to other institutions.		.2	.16	.58	.10	.530	.134	5.01	0.01 2>3, 1>3

Academic Rank:

Grp1* = Lecturer Grp2* = Assistant professor Grp3* = Associate and full professor

Lecturers rated the mean demand scores of five faculty development methods significantly higher than did associate and full professors: workshops or presentations that explore various methods of instruction; workshops or seminars on student testing; specialists on campus to assist faculty in use of audiovisual aids; special professional library; and visitations to other institutions.

Assistant professors rated the mean demand scores of two faculty development methods significantly higher than did lecturers: workshops, seminars, or programs to improve the management of departmental operations; and system for faculty to assess themselves.

It appears that associate and full professor perceived the need for a greater emphasis than present on selected faculty development methods significantly less often than did the other two groups. Indeed, it was assistant professors that consistently perceived the need for greater emphasis on the eleven methods that differed statistically from the associate and full professors and on two that differed from the lecturers. These findings may suggest that the assistant professors would be most receptive to the use of these faculty development methods. Perhaps assistant professors should be selected as an initial target group for any faculty development program.

Organizational arrangements. In Table 6.19; Appendix B (p. 261), the results of ANOVA and the Scheffe' tests of all items of organizational arrangements are presented. As shown in the Table 4.19, two items listed under person(s) providing expertise for faculty development activities and four under incentives showed significant differences by academic rank.

Assistant professors rated the need for increased emphasis on the items referring to a dean of one's own faculty and to an associate dean of one's own campus as person(s) providing expertise for faculty development activities significantly higher than did lecturers. Similarly, assistant professors rated the items referring to faculty committee at one's own campus and to specialist consultants from outside the university significantly higher than did associate and full professors.

In terms of incentives, lecturers and assistant professors perceived a significantly higher need for increased emphasis than did associate and full professors on three items: travel grants to refresh or update knowledge; travel funds to attend professional conferences; and visiting scholars programs. The need for an increased emphasis on temporary teaching load reduction was expressed by assistant professors significant higher than by the other two groups.

Table 4:19
Organizational Arrangements Which Indicated
Significant Differences by Academic Rank

Aspect	Organizational Arrangements Item	Grp1* N=71		Grp2* N=46		Grp3* N=10		ANOVA F	P	Scheffé' ($p \leq 0.10$)
		MDS	SD	MDS	SD	MDS	SD			
Expertise	Ass't. dean of own faculty	6.56	1.37	7.24	1.30	6.50	1.60	3.25	0.04	2>1
	Consultants from outside	7.02	1.37	7.40	1.33	6.13	1.25	3.06	0.05	2>3
Incentives	Teaching load reduction	6.79	1.33	7.66	1.35	6.00	1.00	8.50	0.00	2>3, 2>1
	Grants to update knowledge	7.55	1.13	7.39	1.32	6.25	1.28	4.12	0.02	1>3, 2>3
	Funds to attend prof. conferences	7.45	1.24	7.39	1.30	6.25	1.28	3.26	0.04	1>3, 2>3
	Visiting scholars	7.32	1.23	7.39	1.14	6.22	1.30	3.66	0.03	2>3, 1>3

Academic Rank:

Grp1* = Lecturer
Grp2* = Assistant professor
Grp3* = Associate and full professor

The findings were similar to those presented in the preceding section. Of the six items showing significant differences, it was once again the associate and full professors that indicated a significantly lower mean demand score than the other two groups. Except on two items, assistant professors maintained the highest position in the comparisons.

Differences by Qualification

Under this classification, the respondents were classified according to their highest earned degree. These groups comprised 13 respondents who earned bachelor's degree, 106 the master's degree, and 8 a doctoral degree.

Aims of faculty development. Table 6.20 in Appendix B (p. 264) lists the results of the ANOVA and the Scheffe' tests of all faculty development aims by academic qualification. Table 4.20 shows eight aims that received thirteen significant differences among respondent groups. It also reveals that respondents with doctoral degrees perceived a significantly lower importance for faculty development aims than did the other two groups.

Respondents with master's and bachelor's degrees rated the following five faculty development aims significantly higher than did respondents with doctoral degrees: to understand the administration of educational organizations;

Table 4.20

Faculty Development Aims Which Indicated Significant Differences by Qualification

Item No.	Aim	Grp1*		Grp2*		Grp3*		ANOVA F	Scheffé, p<0.10
		N=13	MS	N=108	MS	N=8	MS		
8.	To understand the administration of educational organizations.	3.92	0.86	3.74	1.00	2.88	1.36	3.06	0.05
17.	To acquire knowledge and skills necessary for college teaching but were not acquired from preservice training.	3.77	1.01	3.70	1.08	2.63	1.41	3.69	0.03
24.	To develop communication skills for instructing in student-opinion oriented programs.	3.92	0.64	3.59	0.96	2.75	1.49	3.71	0.03

43.	To develop a sensitivity for students', emotional and social needs.	4.00	0.71	3.28	1.08	2.88	1.25	3.48	0.03
51.	To learn about the functions of administration in this campus.	3.77	0.93	3.22	0.99	2.63	1.41	3.27	0.04
57.	To understand the implication of an "open door" policy in higher education.	3.54	0.78	3.58	0.97	2.63	1.41	3.52	0.03

Qualification:

Grp1* = Bachelor's degree

Grp2* = Master's degree

Grp3* = Doctoral degree

to acquire knowledge and skills necessary for college teaching but which were not acquired from preservice training; to develop communication skills for instructing in student-opinion oriented programs; to learn how to conduct social science research; and to learn how to diagnose students' educational needs.

Respondents with bachelor's degrees rated the following aims significantly higher than did their counterparts with doctoral degrees: to understand student behavior; to develop a sensitivity for students' emotional and social needs; to learn about the functions of administration in this campus; to learn about community services and human resources available to this campus; and to learn how to prepare independent study materials.

Three faculty development aims were rated significantly higher by respondents with master's degrees than by those with doctoral degrees: to understand the politics involved in education; to learn about educational innovation in higher education; and to understand the implication of an "open door" policy in higher education.

Only one faculty development aim had significantly higher mean scores by respondents with bachelor's degrees than by those with master's degree: to develop a sensitivity for students' emotional and social needs.

There also were significant differences among groups on the overall mean scores, indicating a relationship between

the expressed need for faculty development aims and the qualifications of the respondents. Respondents with the highest qualification, doctoral degrees, rated the need for faculty development aims significantly lower than did the respondents who were less qualified. But there were no significant differences between the mean scores of the respondents with bachelor's and those with master's degrees. It was rather interesting to note that each of the eight aims that reached significant differences by academic qualification, was rated below 3.00, below moderate need, by respondents with doctoral degrees. Respondents with doctoral degrees seemed reluctant to accept the importance of these aims. This finding may corroborate the concerns expressed by Gaff (1979) about a false conception that those with doctoral degrees are qualified as effective university teachers.

Methods of faculty development. The results of ANOVA and the Scheffe' tests of all thirty-one faculty development methods by respondents with bachelor's, master's and doctoral degrees are listed in Table 6.21, Appendix B (p. 270). Table 4.21 presents the five methods that were perceived differently by the respondent groups.

Table 4.21

Faculty Development Methods Which Indicated Significant Differences by Qualification

Item No.	Method	Grp1*		Grp2*		Grp3*		ANOVA		Scheffé ($p \leq 0.10$)	
		N=13	MDS	N=106	MDS	N=8	MDS	SD	F	P	
8.	Workshops, seminars, or programs to improve the management of departmental operations	7.08	1.26	7.33	1.11	6.25	1.58	3.38	0.04	>3	
14.	Systematic teaching or course evaluations by an administrator	7.54	1.13	6.75	1.27	6.25	1.17	3.13	0.05	>3	
27.	Visitations to other institutions	7.62	1.04	7.40	1.16	6.38	1.41	3.23	0.04	$>3, 2>3$	
28.	Faculty exchange programs with other institutions	7.62	1.12	6.66	1.34	7.13	1.13	3.34	0.04	>2	
29.	Faculty take courses offered by colleagues	7.69	1.03	7.69	1.12	6.25	1.04	5.64	0.00	$>3, 1>2$	

Qualification:

Grp1* = Bachelor's degree

Grp2* = Master's degree

Grp3* = Doctoral degree

The respondents with bachelor's degrees perceived a significantly higher need for an increased emphasis on three methods than did respondents with doctoral degrees: systematic teaching or course evaluations by an administrator; visitations to other institutions; and faculty take courses offered by colleagues.

Respondents with master's degrees rated the mean demand scores of two methods of faculty development significantly higher than did respondents with doctoral degrees: workshops, seminars, or programs to improve the management of departmental operations; and visitations to other institutions.

The respondents with bachelor's degrees regarded the need for an increased emphasis on two methods of faculty development significantly higher than did respondents with master's degrees: faculty exchange programs with other institutions; and faculty taking courses offered by colleagues.

These findings suggest a relationship between expressed need for a changed emphasis in selected methods and qualifications of the respondents; the higher the qualification the lower the perceived need.

• **Organizational arrangements.** In Table 6.22, Appendix B (p. 273), the results of ANOVA and the Scheffe' tests of all items of organizational arrangements as classified by highest degrees earned are presented. The four items that showed statistically significant differences by academic qualification are shown in Table 4.22.

Respondents with bachelor's degrees regarded the need for an increased extent of involvement on three items significantly higher than did those with master's and doctoral degrees: vice-president at one's own campus; and faculty development officer as preferable persons providing expertise for faculty development activities; and funds for developing new courses as incentives encouraging participation. Respondents with bachelor's degrees also felt a significantly higher emphasis should be placed on salary credit for completed programs of faculty development as an incentive encouraging participation than did their counterparts with master's degrees.

From the findings on these four items showing statistical differences, a conclusion similar to that relative to faculty development methods was drawn: the higher the qualification of the respondents the lower the perceived mean demand score for these organizational arrangements for faculty development.

Table 4.22

Differences by Years of Experience at the University

Under this classification, respondents were grouped into four groups by number of years of experience at the university under study: respondents who had been working at the university for five years or less, six to ten years, eleven to fifteen years, and sixteen years or more.

Aims of faculty development. Table 6.23 of Appendix B (p. 276) lists the results of the ANOVA and the Scheffe' tests of all faculty development aims among respondents by years of experience. Four aims that showed significant differences by years of experience are presented in Table 4.23.

Respondents with experience of eleven to fifteen years rated the following three faculty development aims significantly higher than did respondents with five years or less: to learn to integrate content activities with other courses; to acquire knowledge and skills necessary for college teaching but which were not acquired from preservice training; and to improve skills in using the lecture technique.

The aim referring to improving skills in using the lecture technique was rated significantly higher by respondents with five years experience than by respondents with six to ten years and with sixteen years or more.

Table 4.23

Faculty Development Aims Which Indicated Significant Differences by Years of Experience at the University

Item No.	Aim	Grp2*				Grp3*				Grp4*				ANOVA F	P	Scheffé' ($p \leq 0.10$)
		N=24	N=50	MS	SD	N=31	MS	SD	N=23	MS	SD	F				
5.	To acquire a knowledge of the history of this university.	2.54	1.06	2.10	0.93	2.17	0.95	2.78	1.38	2.77	0.04	4>2				
10.	To learn to integrate content activities with other courses.	4.50	0.59	4.00	0.81	3.71	0.90	4.09	-0.90	4.32	0.01	1>3				
17.	To acquire knowledge and skills necessary for college teaching but were not acquired from preservice training.	4.08	1.14	3.78	0.98	3.06	1.18	3.65	0.98	4.67	0.00	1>3, 2>3				
26.	To improve skills in using the lecture technique.	4.25	0.90	3.65	0.93	3.48	1.03	3.48	0.85	3.81	0.01	1>4, 1>3, 1>2				

Years of experience at the university:

Grp1* = 5 years or less
 Grp2* = 6 to 10 years
 Grp3* = 11 to 15 years
 Grp4* = 16 years or more

Respondents with sixteen years or more experience rated the aim referring to acquiring a knowledge of the history of this university significantly higher than did the respondents who had been working there for five years or less. To acquire knowledge and skills necessary for college teaching but were not acquired from preservice training was rated significantly higher by respondents with six to ten years experience than by those with eleven to fifteen years.

It appears that the groups with the least experience at the university expressed a significantly higher need for faculty development aims than those with more experience. But it was the group with the second most experience that perceived a significantly lower need for selected aims than the other three groups. Although the need for faculty development did not vary directly with the years of experience at the university, these findings suggest that the initial target group for faculty development programs should be the academic staff who have worked at the university for five years or less.

Methods of faculty development The results of ANOVA and the Scheffe tests of all thirty-one faculty development methods by respondent according to years of experience are listed in Table 2.21, Appendix B (p. 85). Table 2.21 presents five null hypotheses which were not significant.

Table 4.24

Faculty Development Methods Which Indicated
Significant Differences by Years of Experience
at the University

P. No.	Item No.	Method	Grp1*		Grp2*		Grp3*		Grp4*		ANOVA F	Scheffé' ($P \leq 0.10$) P	
			N=24	MDS	N=50	MDS	N=31	MDS	N=23	MDS			
1.		Workshops or presentations that explore various methods of instruction.	7.25	1.33	7.33	1.09	6.97	4.30	6.43	1.08	3.06	0.03	>4
2.		Workshops, seminars, or short courses on subject matter.	7.45	1.18	7.39	1.19	7.00	0.87	6.68	1.09	2.81	0.04	
3.		Workshops or seminars on research and scholarship skills.	7.91	1.15	7.43	1.14	7.30	1.09	6.71	1.15	4.11	0.01	>4
4.		Systematic ratings of instruction by students.	7.26	1.39	7.35	1.25	7.17	1.29	6.43	1.17	2.69	0.05	>4
5.		Specialists on campus to assist faculty in use of audiovisual aids.	7.52	1.12	6.92	1.08	6.73	0.94	6.48	0.93	4.23	0.01	>4, 1>3
6.		Special professional library.	7.87	1.32	7.24	1.16	7.17	1.21	6.52	1.36	4.33	0.01	>4

Years of experience at the university:

Grp1* = 5 years or less
 Grp2* = 6 to 10 years
 Grp3* = 11 to 15 years
 Grp4* = 16 years or more

The respondents with five years or less experience at the university perceived a significantly higher need for an increased emphasis on three methods of faculty development than did respondents with sixteen years or more: workshops or seminars on research and scholarship skills; specialists on campus to assist faculty in use of audiovisual aids; and special professional library. Respondents with the five years or less experience also perceived a significantly higher mean demand score for specialists on campus to assist faculty in use of audiovisual aids than did respondents with eleven to fifteen years.

Respondents with six to ten years experience rated the need for an increased emphasis on two methods significantly higher than did their counterparts with sixteen years or more: workshops or presentations that explore various methods of instruction; and systematic ratings of instruction by students.

These findings show a negative relationship between degree of perceived need for an increased emphasis on selected faculty development methods and the length of experience at the university. As expected, those who had worked longer at the university tended to perceive less need for an increased emphasis on selected faculty development methods. It would appear that as the years of experience at the university increased, the academic staff gained more confidence in their jobs and perceived less of a need for a

shift of emphasis on methods of faculty development.

Organizational arrangements. In Table 6.25, Appendix B (p. 285), the results of ANOVA and the "Schéffe" tests of all items of organizational arrangements are presented. Except for three items shown in Table 4.25, there were no significant differences in the ratings among groups classified by years of experience.

Respondents who worked at the university for five years or less rated the mean demand scores significantly higher than did their counterparts who worked there for sixteen years or more on the following items: beginning of university term as preferable time for faculty development activities; and lighter than normal load for first year faculty; and funds for developing new courses as preferable incentives encouraging participation. Respondents with five years or less also rated the need for an increased emphasis upon funds for developing new courses as preferable incentives significantly higher than did respondents who had ten to fifteen years experience.

Similar to the findings on methods, the respondents with less experience at the university indicated a significantly higher need for a changed emphasis on some items of organizational arrangements of faculty development than did their counterparts with more experience.

Table 4.25

Organizational Arrangements Which Indicated Significant Differences by Years of Experience at the University

Years of experience at the university:

Grp1* = 5 years or less
 Grp2* = 11 to 15 years

Grp3* = 6 to 10 years
 Grp4* = 16 years or more

Differences by Most Recent Full-Time Job

Under this classification, the respondents were grouped into four groups by type of most recent full-time job prior to working at the university: no previous experience, experience in fields other than education, experience in elementary or secondary schools, and experience in institutions of higher education.

Aims of faculty development. Table 6.26 of Appendix B (p. 288) lists the results of the ANOVA and the Scheffe' tests of all faculty development aims by most recent full-time job. Table 4.26 lists ten faculty development aims which showed fourteen significant differences by type of most recent full-time job.

The ratings by respondents whose most recent full-time jobs were in fields other than education had mean scores of two faculty development aims significantly higher than the ratings by the other three groups: to learn about accepted policies regarding student admissions and attendance; and to learn to use techniques other than verbal in teaching. Respondents with previous experience in fields other than education also rated the following faculty development aims significantly higher than did their counterparts with experience in elementary or secondary schools: to learn how to construct instruments for evaluating students' progress;

Table 4.26

Faculty Development Aims Which Indicated Significant Differences by Most Recent Full-Time Job

Table 4.28 (continued)

Item No.	Aim		Grp1*		Grp2*		Grp3*		Grp4*		ANOVA F	Scheffé's P ^a (p≤0.10)	
			N=10	MS	N=20	MS	N=22	MS	N=11	MS			
65.	To develop skills in using game and stimulation in teaching.		3.60	0.97	4.25	0.79	3.23	1.02	3.91	0.70	4.82	0.00	>3
67.	To learn to use techniques other than verbal in teaching.		3.80	0.63	4.85	0.37	3.86	0.94	4.09	0.70	8.40	0.00	>1 >3

Type of most recent full-time job:

- Grp1* = None
 Grp2* = Experience in a field other than education
 Grp3* = Experience in an elementary or a secondary school
 Grp4* = Experience in an institution of higher education

to develop a sensitivity for students' emotional and social needs; to understand theories of social organizations; to conduct research related to the instructor's own course and teaching; and to develop skills in using game and stimulation in teaching.

Respondents whose most recent full-time jobs were in fields other than education also rated the aims referring to learning how to develop interpersonal relationships among students and staff, and to developing skill in making learning relevant for students significantly higher than did their counterparts with previous experience in higher education. To acquire knowledge and skills necessary for college teaching but which were not acquired from preservice training was the only aim rated significantly higher by the group with no previous experience than by those with experience in higher education.

All but one of the faculty development aims receiving significantly different ratings were rated significantly higher by the respondents who had experience in fields other than education than by the other groups, including the group with no experience prior to the appointment at the university. Another unexpected finding was that the respondents indicating a significant lower need for most of the methods than the other groups were those with experience in elementary or secondary schools rather than the ones who had experience in institutions of higher education.

Methods of faculty development. The results of ANOVA and the Scheffe' tests of all thirty-one faculty development methods by respondents under this classification are listed in Table 6.27, Appendix B (p. 294). The eight methods receiving mean demand scores which were significantly different are presented in Table 4.27.

The respondents whose most recent full-time jobs were in fields other than education rated the mean demand scores of the following faculty development methods significantly higher than did respondents with previous experience in elementary or secondary schools: workshops, seminars, or short courses on subject matter; workshops or seminars on student testing; workshops or presentations that explore general issues or trends in education; formal assessments by colleagues; system for faculty to assess themselves; classroom visitation by an instructional resource person; analysis of in-class video tapes; senior teachers work closely with new teachers; and professional and personal development plan.

Respondents with previous experience in fields other than education also regarded the method referring to senior teachers working closely with new teachers in need of significantly greater emphasis than did respondents with no previous experience.

Table 4.27

Faculty Development Methods Which Indicated Significant Differences by Most Recent Full-Time Job

Item No.	Method	Grp1*		Grp2* N=20 MDS SD		Grp3* N=22 MDS SD		Grp4* N=11 MDS SD		ANOVA		Scheffé (P<0.10)
		N=10	SD	MDS	SD	MDS	SD	F	P			
2.	Workshops, seminars, or short, on subject matter.	7.50	0.97	7.79	0.92	6.73	1.08	7.09	1.14	3.95	0.01	2>3
9.	Workshops or presentations that explore general issues or trends in education.	7.30	1.16	7.89	0.83	6.91	1.19	7.27	1.10	2.76	0.05	2>3
12.	Formal assessments by colleagues.	7.00	1.25	8.00	1.00	6.77	1.31	7.27	1.35	3.66	0.02	2>3
15.	System for faculty to assess themselves.	7.56	1.13	8.11	0.88	6.95	1.43	7.45	1.37	3.01	0.04	2>3
16.	Classroom visitation by an instructional resource person.	6.78	1.20	7.63	1.16	6.45	1.41	7.27	1.35	3.05	0.04	2>3
17.	Analysis of in-class video tapes.	7.00	0.87	8.11	1.10	6.95	1.29	7.36	0.92	4.07	0.01	2>3
19.	Senior teachers work closely with new teachers.	6.78	1.20	8.20	1.00	6.95	1.25	7.54	1.24	3.65	0.02	2>1,2>3
20.	Professional and personal development plan.	7.11	0.93	7.89	1.10	7.00	1.15	7.09	0.84	2.75	0.05	2>3

Type of most recent full-time job:

- Grp1* = None
- Grp2* = Experience in a field other than education
- Grp3* = Experience in an elementary or a secondary school
- Grp4* = Experience in an institution of higher education

These findings were similar to those regarding aims.

That is, the group with experience in fields other than education showed significantly higher need for an increased emphasis in some faculty development methods than did the group with experience in elementary or secondary schools.

Organizational arrangements. In Table 6.28, Appendix B (p. 297), the results of ANOVA and the Scheffe' tests of all items of organizational arrangements among groups classified under this category are presented. Table 4.28 shows three items on which four differences were statistically significant by most recent full-time job.

Respondents who had most recent full-time jobs in fields other than education prior to joining the university rated the mean demand scores of the following items significantly higher than did their counterparts with previous experience in elementary or secondary schools: the main campus as a preferable site for faculty development activities; and the dean of one's own faculty, and faculty development officers as preferable persons assuming active responsibility for faculty development programs. Respondents who had no work experience prior to joining the university also rated the mean demand score for the main campus as a preferable location for faculty development activities significantly higher than did respondents who had most recent full-time jobs in elementary or secondary schools.

Table 4.28
 Organizational Arrangements Which Indicated
 Indicated Significant Differences by Most Recent Full-Time Job

Organizational Arrangements Aspect	Item	Grp1*		Grp2*		Grp3*		Grp4*		ANOVA F	P ($P \leq 0.10$)	Scheffé' ($1 > 3, 2 > 3$)
		N=10	MDS	N=20	MDS	SD	MDS	SD	N=11	MDS		
Location	campus #1	7.00	1.51	6.47	1.18	5.17	1.79	6.27	0.65	4.26	0.01	1>3, 2>3
personnel	Dean of own faculty	6.89	1.90	7.53	1.23	6.22	1.31	6.45	0.82	3.14	0.04	2>3
	Fac. dev. officer	6.56	1.67	7.79	1.25	6.33	1.50	6.33	1.03	3.14	0.04	2>3

Type of most recent full-time job:

Grp1* = None
 Grp2* = Experience in a field other than education
 Grp3* = Experience in an elementary or a secondary school
 Grp4* = Experiences in an institution of higher education

Once again, the respondents with experience in elementary or secondary schools expressed significantly lower mean demand scores on three items of organizational arrangements of faculty development than did respondents with experience in fields other than education.

General Issues

Respondents were asked, in an open ended manner, to express their general perceptions regarding previous faculty development activities they in which had recently participated; recurring problems for which academic staff needed more knowledge, attitude and skill development; recurring problems for which academic staff needed adjustment in conditions of work or faculty support provisions; and their plans for further professional development. A content analysis of all responses to each question of this section was performed by grouping responses according to their similarities. A summary of findings in terms of frequency of response is presented in Table 6.29, Appendix B (p. 300).

Limited practices of faculty development activities at the university under study were confirmed. One half of all respondents on this item mentioned seminars as the activities of faculty development in which they had recently participated. Seminar participation was followed by workshops, curriculum development, conferences, evaluation,

instructional development, and personal development. Other activities mentioned once only included research, professional field trips, and study leaves.

A number of recurring problems requiring more knowledge, attitude or skill development for academic staff were mentioned. The problems cited most frequently were: incompetent administrators who tended to be narrow minded, unfair to their subordinates in terms of promotion, granting study leaves and so on, and unable to make sound decisions; low faculty commitment and responsibility; incompetent faculty members who required improvement of knowledge in their field of specialization as well as teaching methods; and inadequacy of knowledge and uses of educational technologies.

In terms of recurring problems requiring adjustment in conditions of work, very low salary of individual academic staff was cited most frequently. Since salaries were regarded as insufficient for the well being of respondents' families, some academic staff held secondary jobs to supplement their income, and thus they could not devote sufficient time and effort to their university tasks. Other problems were: lack of encouragement for participation in faculty development activities, research and community services; excessive teaching as well as other assignments; inadequate comfortable offices with privacy; inadequate support from the university administration in terms of

facilities and funds for professional development programs; lack of educational media and qualified textbooks; low morale; lack of academic freedom; personal conflicts among faculty members; inappropriate role definition; inferior classroom facilities; ineffective communication among units; and lack of long-range planning.

Among the plans for further professional development, activities related to academic promotion were cited most frequently, including such activities as writing textbooks, publishing academic articles, and conducting research. Other personal and professional improvement plans included such activities as revising course materials, improving knowledge and teaching methods, seeking study leaves, and participating in professional seminars, workshops, and conferences, university exchange programs, and professional field trips.

Summary

In this chapter, the findings of the study were reported and discussed. The data for this study were provided by questionnaire returns from 89 faculty members and 39 administrators. The sample was randomly selected from all full-time academic staff who were working at four campuses of a selected university in Thailand. The data were analyzed and presented in terms of the perceptions regarding aims, methods and organizational arrangements of

faculty development. Differences of the perceptions between faculty members and administrators, as well as among groups based on campus, faculty, academic rank, qualification, number of years of experience at the university and type of most recent full-time job were also examined.

Aims of Faculty Development

In general, almost all the aims listed in the questionnaire were perceived as appropriate for faculty development activities at the university under study. The aims receiving the first and the second highest emphases were to increase knowledge in one's own area of specialization and to update knowledge in one's own area of specialization; while to acquire knowledge of the history of the university and to know characteristics of the campus' student body were perceived as having the least emphases. Most of the aims receiving high ratings were under the modes of instructional improvement and of personal improvement, while the aims of low need were under the modes of students' needs and of university setting.

There were no significant differences between faculty members' and administrators' perceptions of aims. However, significant differences of perceptions of need regarding selected faculty development aims among groups by respondent characteristics were found. These findings were: campus #1 perceived the need significantly higher than did the other

campuses; Faculty of Sciences perceived the need significantly lower than did the other faculties, especially the Faculty of Education; lecturers and assistant professors seemed to perceive the need significantly higher than did associate and full professors; the higher the qualification of the respondent, the lower the degree of perceived need; shorter experience at the university related to significantly higher need; and most recent full-time jobs in fields other than education related to a significantly higher need.

Methods of Faculty Development

The findings revealed that the actual practices of faculty development methods at the university were limited and that all the methods listed in the questionnaire were perceived as desirable. Consequently, a certain degree of need for each of the methods was expressed. The methods referring to workshops or seminars on research and scholarship skills and visitations to other institutions were perceived as having the highest need, while workshops or seminars dealing with curriculum development, and faculty taking courses offered by colleagues were perceived as having the lowest need.

Faculty members and administrators perceived a similar degree of need on all but one faculty development method. In terms of differences in perceptions by respondent characteristics, the following were found to be significant:

campus #4 expressed the need significantly higher than did the other campuses; Faculty of Education perceived the need significantly higher than did the Faculties of Humanities and Sciences; associate and full professors expressed the need significantly lower than did respondents with lower academic ranks; but assistant professors perceived a significantly higher need than did lecturers; respondents with higher qualifications expressed a significantly lower degree of need than those with lower qualifications; shorter experience at the university related to a significantly higher need than longer experience; and most recent full-time jobs in fields other than education related to a significantly higher degree of need.

Organizational Arrangements for Faculty Development

As with the findings related to methods of faculty development, the findings about organizational arrangements also revealed the scarcity of actual faculty development practices at the university under study.

The findings indicated that increased emphases should be placed upon: periods of time during intersession as timing for faculty development activities; neighboring university as choice of location for faculty development activities; the vice-president in charge of academic affairs as the most important person assuming responsibility for faculty development programs; specialist consultants from

outside the university as persons providing expertise for faculty development activities; and travel grants to refresh or update knowledge as incentives for participation.

The findings also suggested a high degree of similarity of the perceptions between faculty members and administrators. As for differences among groups by respondent characteristics, no definite patterns were found. **General Issues**

Faculty development at the university under study was perceived as inadequate due to a number of obstacles. These obstacles included lack of both moral and financial support, and lack of interest and cooperation from academic staff.

Low salary was cited as a salient obstacle for the academic staffs' commitment to their university task. A number of academic staff held secondary jobs to supplement their income.

Lack of interest was evident from the respondents' interest to write textbooks and to publish academic papers leading to academic promotion. It seemed that publications, rather than quality of performance as a university teacher, had been a major criterion for promotion. Most plans for involvement in professional development activities seemed to relate to concerns about academic promotion.

CHAPTER 5

SUMMARY, CONCLUSIONS, IMPLICATIONS AND RECOMMENDATIONS

This chapter presents a summary of the study, followed by conclusions and implications. The chapter concludes with recommendations for further research.

* Summary of the Study

The Problem

The problem of this study was to determine the nature and extent of the need for faculty development programs as perceived by academic staff of a selected university in Thailand. The study focussed upon three areas: aims of faculty development, methods of attaining faculty development aims, and organizational arrangements which facilitate faculty development.

The study also investigated the differences of the perceptions between faculty members and administrators, as well as among groups of respondents by: campus, faculty, academic rank, qualification, years of experience at the university, and most recent full-time job.

Methodology

The data for the study were collected using a questionnaire specially developed in Thai language. Usable returns were received from 89 faculty members and 39 administrators from a randomly selected sample of 201 from a list of 1981-1982 full-time academic staff of four metropolitan campuses of a selected university in Thailand.

The data were analyzed to determine the perceptions of faculty members and administrators regarding aims, methods and organizational arrangements of faculty development. Included also in the data analyses were differences of the perceptions between faculty members and administrators, as well as among respondent groups by campus, faculty, academic rank, qualification, years of experience at the university, and most recent full-time job.

The Findings

Aims of faculty development

1. All but two of the sixty-seven aims were perceived as appropriate for faculty development activities.
2. Aims receiving highest ratings were related to instructional improvement and personal development.
3. Aims of low need were related to students' needs and organizational setting.
4. There were no differences between faculty members' and administrators' perceptions of faculty development aims.

5. Campus #4, the physical education campus, perceived a higher need for faculty development aims than did the other campuses.
6. Faculty of Education perceived a higher need for faculty development aims than did the other faculties.
7. Faculty of Sciences perceived a lower need for faculty development aims than did the other faculties.
8. Assistant professors and lecturers occasionally expressed a higher need for faculty development aims than did associate and full professors.
9. The higher the qualification of the respondent, the lower the perceived need for faculty development.
10. Academic staff with less experience at the university tended towards a higher perception of faculty development need.
11. Respondents with most recent full-time jobs in fields other than education perceived a higher need for faculty development.
13. Respondents with most recent full-time jobs in elementary or secondary schools perceived a lower need for faculty development.

Methods of faculty development

1. Practices of faculty development at the university under study were perceived to be limited.
2. All thirty-one methods were perceived as more desirable for faculty development activities than at present.
3. A fairly high need for all the thirty-one methods was expressed.
4. The methods perceived to be most desirable were workshops and seminars on research and scholarship skills, and visitation to other institutions.
5. Campus #4 expressed a significantly higher need for methods than did the other campuses.
6. Faculty of Education seemed to perceive a significantly higher need for methods than did the Faculties of Humanities and Sciences.
7. Assistant professors and lecturers expressed a significantly higher need for methods than did lecturers and associate and full professors.
8. Assistant professors also perceived a significantly higher need for methods than did lecturers.
9. Qualifications of the respondents in terms of highest earned degree accounted for some differences in perceptions of faculty development methods: the higher the qualification, the lower the perceived need.
10. Respondents with shorter experience at the university occasionally perceived a higher need for faculty

development methods than those with longer experience.

11. Respondents with most recent full-time jobs in fields other than education perceived a higher need for methods of faculty development than respondents with jobs in education.
12. Respondents with most recent full-time jobs in elementary or secondary schools perceived a lower need for faculty development methods than other respondents.

Organizational arrangements of faculty development

1. The most preferred timing for faculty development activities was during intersession periods.
2. A neighboring university was the most desirable choice of location for faculty development activities.
3. The vice-president in charge of academic affairs was perceived as the most desirable person assuming responsibility for faculty development programs.
4. With regard to providing expertise for faculty development activities, specialist consultants from outside the university were chosen as the most desirable.
5. Travel grants to refresh or update knowledge was rated as the best incentives for participation in faculty development activities.

Conclusions

Based on the findings of this study, certain conclusions can be drawn. These conclusions relate to the stated purposes of the study and problems posed, and grow out of an interpretation of the data analysis.

The Need for Faculty Development Aims

The findings indicate a strong need for faculty development in the university under study. The highest needs for faculty development were in the areas of instructional and personal improvement, while the lowest needs were in the areas of meeting students' needs and organizational development. The most pressing needs related to factors that might be controlled by individual academic staff. The least pressing needs related to factors over which individual academic staff might have very little, if any, control.

Faculty members and administrators had similar perceptions regarding faculty development aims. This finding corroborates that of Ramaiah (1984), but it is different from that of Weleschuk (1977) who found that faculty members of colleges in Alberta perceived a higher need for development activities than did the administrators. The similarity of perception by faculty members and administrators as found in this study and in the study by Ramaiah (1984) may suggest that, faculty members and

administrators in universities do not differ substantially from each other.

Differences of perceptions by respondents' characteristics, such as campus, faculty and academic rank, were minimal. On those aims showing significant differences among groups, it seemed that respondents with less experience at a university and those with non-educational experiences outside the university perceived greater needs for faculty development than others. It may be easier for such persons to acknowledge their need for professional development than it is for those who are "well established" or who have previous experience in education.

The Need for Methods of Faculty Development

Similar to the findings relative to faculty development aims, a fairly high need for faculty development methods was indicated. Differences of perceptions among respondent groups related basically to respondents' working experiences. Those from Faculties of Education who were involved in teaching others how to teach, those with less experience at the university and those who previously worked in non-educational fields tended to express a desire for greater emphasis on a variety of faculty development methods than did other groups.

In addition, it is evident from the findings that practices of faculty development at the university under

study were limited and that all thirty-one faculty development methods should receive a greater emphasis than at present. Interestingly, all five categories of methods were generally perceived as equally preferred. While there were minimal differences in the preference among the methods, these differences could be accounted for by the topical concern of the activity rather than by the method per se.

The Need for Organizational Arrangements for Faculty Development

Besides a clear indication of a strong need for faculty development and a need for more faculty development activities than at present, it appears that academic staff of the university tend to accept whatever organizational arrangements can be provided for faculty development.

The findings also indicate that existing resources within the university were either inadequate or inappropriate for the purposes of faculty development. Such arrangements for faculty development as utilization of facilities and resources of a neighboring university, invitation of specialist consultants from outside the university, and allocation of travel funds were highly valued.

Implications

It is evident from the findings that a need for greater faculty development activities exists in the university under study. Based on the findings, the following implications for practices at the the university, as well as at other Thai universities, may be offered:

1. Commitment to faculty development should be included in the policies of the university administration.
2. A faculty development center established on the main campus should be placed under the responsibility and leadership of the vice-president in charge of academic affairs. This center should establish faculty development programs to meet the overall operational needs of the university.
3. Faculty development centers on satellite campuses could be under the responsibility and leadership of one of the assistants to the vice-president. These centers while addressing the specific needs of faculty members on their campuses, should cooperate with the faculty development center in the main campus.
4. Academic staff should be encouraged to participate in faculty development activities through appropriate recognition and rewards given to active participants in faculty development programs. Excellence in teaching should be regarded as a main criterion for promotion and less weight should be given to research and scholarly

publications.

5. In order to gain wider acceptance in the university, initial efforts to increase faculty development activities should focus upon the groups that are most receptive to faculty development programs.
6. Faculty development activities should be carried on primarily during intersession periods in cooperation with other universities. Using the facilities and resources of other universities may be more desirable than using those of one's own university. In addition, faculty exchange programs should also be encouraged.
7. Adequate funds for faculty development programs as well as for active participation should be allocated.

Recommendations for Further Research

A number of suggestions for further research seemed appropriate. Research based on these suggestions could lead to further expansion of knowledge relating to faculty development in universities, especially universities in Thailand.

1. Studies similar to this one should be conducted on other campuses of the university under study, as well as at other universities in Thailand. Integration of the findings of these studies would provide a more comprehensive understanding of faculty development

programs in universities.

2. A study relative to perceptions of students regarding the need for faculty development could also provide a more comprehensive view of faculty development programs.
3. A study relative to effectiveness of faculty development programs could increase the participation of faculty members and strengthen the support from administrators.
4. A study relative to efficiency of faculty development programs could enhance the fiscal accountability of such programs.
5. An examination of the relationship between organizational climate, as well as other organizational variables, and faculty development programs could expand the knowledge in the field of faculty development.
6. A study of faculty development and its relationship to preservice training for faculty members in universities in Thailand would also provide interesting insights into this area of study.

QUESTIONNAIRES

164

F. THAI VERSION QUESTIONNAIRE

ก่อนที่
จะมีส่วนร่วม

- ๑. วิทยาเรอก
๒. กอบ
๓. ภาควิชา
๔. กำหนดแนวทางวิชาการราՐາມ,บุรุษศาสตร์รองศาสตราจารย์.
- ศาสตราจารย์
- ๕. กำหนดแนวทางบริหารหัวหน้าภาควิชา,รองคณบดี,คณบดี,รองอธิการบดี
.....อธิการบดี,กำหนดอั่น(ไปรกระบุ)
- ๖. กฎหมาย
ปริญญา รัฐบัณฑิตสถาบันที่สร้างเรื่องการศึกษานักศึกษา
- ๗. วิชาที่มีความเจี่ยราด หรือวิชาที่สอน
๘. จำนวนที่ทำกางสอน นับถึงเดือน พฤษภาคม ๒๕๖๘
 - ๙. นนawiทบลัพศรินทร์นทร์ไว้ทกปี
 - ๙.๑ ระดับมหาวิทยาลัยทั้งหมดปี
 - ๙.๒ ระดับวิทยาลัยปี
 - ๙.๓ ระดับมัธยมศึกษาปี
 - ๙.๔ ระดับประถมศึกษาปี
 - ๙.๕ ประสบการณ์การทำงานที่ต้องมีภูมิปัญญาในงานในมหาวิทยาลัยศรีนทร์ไว้ทก (ถ้ามีไปรกระบุ)

รุ่นงมหาช่องการพัฒนาฯฯฯฯ

การเรียน

แบบสอนตามก่อนที่ ๒ นี้ ประกอบด้วยข้อความเกี่ยวกับรุ่นงมหาช่องการพัฒนาฯฯฯฯ ไปรุ่นเรียนของกลุ่มสอนทั่ว เฉลยสอนท้าบช่องแต่ละข้อ เพื่อแสดงว่าหานทองกราในพัฒนาฯฯฯฯ ในวิทยาเขต ช่องหาน ประสมบทกามรุ่นงมหาบันน้ำเพียงไก

ความหมายของคำว่า เลย ๑=ในกองการ เลย, ๒=กองการน้ำง เลกนอบ, ๓=กองการป่านกลาง

๔=กองการ กอนชางมาก, ๕=กองการนาก

ก้าช่าง หานท้องการในพัฒนาฯฯฯฯ ในวิทยาเขตของหานประสมบทกามรุ่นงมหาบันน้ำไปนี้เพียงไก?

๑. เพื่อเรียนรู้การใช้แพลงคุณชนช่วงการเรียนการสอน ๒ ๗ ๖ ๔

ก้ากอนชางนนี้แสดงว่าหานต้องการหอนช่างมากให้ ๑. ก้าใช้แพลงคุณรู้ในคุณชนช่วงการเรียนการสอน เป็นรุ่นงมหาช่องการพัฒนาฯฯฯฯ ในวิทยาเขตของหาน

ความหมายของคำว่า เลย ๑=ในกองการ เลย, ๒=กองการน้ำง เลกนอบ, ๓=กองการป่านกลาง

๔=กองการ กอนชางมาก, ๕=กองการนาก

หานท้องการในพัฒนาฯฯฯฯ ในวิทยาเขตของหานประสมบทกามรุ่นงมหาบันน้ำไปนี้เพียงไก?

๑. เพื่อเข้าใจปรัชญาของสถาบันการศึกษาแห่งนี้ ๒ ๗ ๔ ๔

๒. เพื่อศึกษาความรู้และทักษะทางภูมิปัญญาพันธุ์ ๒ ๗ ๔ ๔

๓. เพื่อเรียนรู้ปัญหาที่เกี่ยวกับ ไปรยกรรมการเรียนการสอนในวิทยาเขตนี้ ๒ ๗ ๔ ๔

๔. เพื่อเรียนรู้วิธีการสอนเป็นรายบุคคล (individualized instruction) ๒ ๗ ๔ ๔

๕. เพื่อทราบประวัติความเป็นมาของวิทยาเขตนี้ ๒ ๗ ๔ ๔

๖. เพื่อเข้าใจกฎกิจกรรมของนิสิตนักศึกษา ๒ ๗ ๔ ๔

๗. เพื่อเข้าใจหลักการพูดในชุมชนของหาน ๒ ๗ ๔ ๔

๘. เพื่อเข้าใจการบริหารองค์กรทางการศึกษา (educational organizations) ๒ ๗ ๔ ๔

๙. เพื่อเรียนรู้วิถีวิถีชนชั้นที่เกี่ยวกับญี่ไทย ๒ ๗ ๔ ๔

๑๐. เพื่อให้สามารถสืบพันธุ์ชาติที่สอนกันไว้ต่อไป ๒ ๗ ๔ ๔

๑๑. เพื่อปรัชญาของสถาบันการศึกษา ๒ ๗ ๔ ๔

๑๒. เพื่อเข้าใจวิถีชีวิตรุ่งโรจน์ (นิสิตนักศึกษา) ๒ ๗ ๔ ๔

- ๑๐. เพื่อสอนปรัชญาการศึกษาในแนวคิดของท่าน • ๖๗๔๔
- ๑๑. เพื่อเพิ่มพูนความรู้ในสาขาวิชาที่สอน • ๖๗๔๔
- ๑๒. เพื่อเรียนรู้วิธีประเบินบลการสอนกับเด็ก ให้มุ่งนำบ่มปั้นปูองการสอน • ๖๗๔๔
- ๑๓. เพื่อสำนักถึงความรู้เชิงข้อมูลเพื่อนอาจารย์และวิชาชีพ • ๖๗๔๔
- ๑๔. ழ្លើស្តាប់ความรู้และหักษะในการสอนระดับมหาวิทยาลัย เนื่องจากขาดการปีกอบรมทาง
การเป็น • ๖๗๔๔
- ๑๕. เพื่อปรับปรุงการปฏิบัติงานของตนให้เป็นที่ยอมรับของนิสิตนักศึกษา บูรณาการ แบบ
ประชารัตน • ๖๗๔๔
- ๑๖. เพื่อพัฒนาความสามารถในการสื่อความหมาย (communication) ชั้นวางส่งเสริม
สมรรถภาพที่กันยูนิ • ๖๗๔๔
- ๑๗. เพื่อปรับปรุงความรู้สาขาวิชาที่เก็บสูตรในทั้นก่อเหตุการณ • ๖๗๔๔
- ๑๘. เพื่อปรับปรุงวิธีการทำงานร่วมกับเพื่อนอาจารย • ๖๗๔๔
- ๑๙. เพื่อเข้าใจบทบาทของบริการแนะแนวประจําวิทยาเขต • ๖๗๔๔
- ๒๐. เพื่อเข้าใจบทบาทของอาจารย์ในวิทยาเขต • ๖๗๔๔
- ๒๑. เพื่อปรับปรุงทักษะด้านการสื่อความหมายชี้ไว้ให้การเรียนการสอนความหมายที่นักความสักน้ำ
ความกิจหนาดของนิสิตนักศึกษา • ๖๗๔๔
- ๒๒. เพื่อเรียนรู้วิธีสอนนิสิตนักศึกษาพื้นฐานทางด้านการเรียน (เรียนมีความสามารถด้วยตัว
ภาษาพูด) • ๖๗๔๔
- ๒๓. เพื่อปรับปรุงหักษะการสอนแบบบรรยาย • ๖๗๔๔
- ๒๔. เพื่อเข้าใจเรื่องการเมืองซึ่งเกี่ยวข้องกับการศึกษา • ๖๗๔๔
- ๒๕. เพื่อเรียนรู้วิธีจัดกิจกรรมทางด้านสังคมศาสตร์ • ๖๗๔๔
- ๒๖. เพื่อเรียนรู้วิธีจัดทำโครงสร้าง (structure) ประสบการณ์การเรียน (เรียนจากงาน
ไปหาบาก) • ๖๗๔๔
- ๒๗. เพื่อสอนวิธีประเบินบลวิถุประสงค์ของการสอนแบบวิชา • ๖๗๔๔
- ๒๘. เพื่อศึกษาวิธีท่องจำสำหรับเสริมการเรียนรู้ (reinforcement of learning) • ๖๗๔๔
- ๒๙. เพื่อปรับปรุงหักษะด้านการนำนิสิตนักศึกษาไปศึกษาแหล่งสถานที่และ การปีกงานสนับ
สนาน • ๖๗๔๔
- ๓๐. เพื่อเรียนรู้ "วัฒนธรรมผู้เยาว์" (youth culture) • ๖๗๔๔

๔= กองการก่อสร้างมาก, ๕= กองการมาก

๑๖. เพื่อเรียนรู้วิธีวินิจฉัยความท้องการด้านการศึกษาของนิสิตนักศึกษา • ๖ ๗ ๔ ๔
๑๗. เพื่อเรียนรู้วิธีสร้างแบบประเมินความก้าวหน้าของนิสิตนักศึกษา • ๖ ๗ ๔ ๔
๑๘. เพื่อเรียนรู้วิธีเขียนบทประสังค์ของกราฟสูง ของว่าที่สอน และของหัวขอว่าที่สอน • ๖ ๗ ๔ ๔
๑๙. เพื่อเรียนรู้และก่อสร้างกิจกรรมทางศิลปะที่มีผลประโยชน์ก่อให้เกิดความเชื่อมโยง • ๖ ๗ ๔ ๔
๒๐. เพื่อเรียนรู้วิธีใช้เวลาวางแผนของตนในเกือบประโภชน์ที่ตุก • ๖ ๗ ๔ ๔
๒๑. เพื่อเรียนรู้วิธีเตรียมวัสดุการเรียนในนิสิตนักศึกษาสามารถเรียนได้ภายใต้หน้าที่ • ๖ ๗ ๔ ๔
๒๒. เพื่อส่งเสริมในอาจารย์บุญรอดพัฒนาเชิงค้นความมุ่งหมายของมหาวิทยาลัย • ๖ ๗ ๔ ๔
๒๓. เพื่อเรียนรู้ทฤษฎีการเรียนการสอนอยู่ในตัว (นิสิตนักศึกษา) • ๖ ๗ ๔ ๔
๒๔. เพื่อเรียนรู้วิธีใช้กระบวนการกรุ๊ป (group dynamics) • ๖ ๗ ๔ ๔
๒๕. เพื่อให้มีความไว้วางใจความท้องการด้านการงานตามแนวคิดของนิสิตนักศึกษา • ๖ ๗ ๔ ๔
๒๖. เพื่อเรียนรู้ในแบบเก็บข้อมูลการสอนนิสิตนักศึกษา และเก็บข้อมูลความคุ้นเรื่องเวลาเรียน • ๖ ๗ ๔ ๔
๒๗. เพื่อเข้าใจทฤษฎีเก็บข้อมูลของกราฟทางสังคม (social organizations) • ๖ ๗ ๔ ๔
๒๘. เพื่อเรียนรู้วิธีแบบแผนที่กำหนดให้กับหัวข้อทางวิชาการของตน • ๖ ๗ ๔ ๔
๒๙. เพื่อเรียนรู้และประยุกต์การวางแผนและกิจกรรมทางวิชาการของตน • ๖ ๗ ๔ ๔
๓๐. เพื่อทำการวิจัยเรื่องที่ตนพึงพอใจทางวิชาการของตน • ๖ ๗ ๔ ๔
๓๑. เพื่อเรียนรู้วิธีแบบเรียนสำเร็จรูป (programmed course units) • ๖ ๗ ๔ ๔
๓๒. เพื่อเรียนรู้การปฏิบัติงานและหน้าที่ของหน่วยบริการวิสาหกิจการเรียน (รวมทั้งของสมุด) • ๖ ๗ ๔ ๔
๓๓. เพื่อเรียนรู้หน้าที่ของผู้อำนวยการในวิทยาเขต • ๖ ๗ ๔ ๔
๓๔. เพื่อเรียนรู้เกี่ยวกับบริการและวิชาการกำงในชุมชน • ๖ ๗ ๔ ๔
๓๕. เพื่อในรู้ว่าอาจารย์ควรร่วมกิจกรรมของนิสิตนักศึกษาในมหาวิทยาลัยเพียงใด • ๖ ๗ ๔ ๔
๓๖. เพื่อเรียนรู้วิธีแบบแผนที่กำหนดให้เหมาะสมกับการเรียนการสอน • ๖ ๗ ๔ ๔
๓๗. เพื่อปรับปรุงเทคนิคการสอนประจำในการสอน • ๖ ๗ ๔ ๔
๓๘. เพื่อเรียนรู้วิธีการสอนที่มีประสิทธิภาพ • ๖ ๗ ๔ ๔
๓๙. เพื่อเข้าใจความหมายของ "นิสิตนายแบบ" ของการศึกษาระดับกับมหาวิทยาลัย • ๖ ๗ ๔ ๔
๔๐. เพื่อเรียนรู้วิธีก่อสร้างเครื่องร่วมการเรียนการสอนระดับกับมหาวิทยาลัย • ๖ ๗ ๔ ๔

๖๔. เพื่อเว็บรูปที่เกี่ยวกับวัสดุการเรียนซึ่งใช้กันทั่วโลกสำหรับประชุมและกิจกรรมเรียนยกที่อาจเป็น
 สื่อการเรียนหลากหลาย (multi-media approaches to teaching) • ๒๐๔๔
๖๕. เพื่อทราบถึงจะนำไปใช้ในสอนภาษาไทยพื้นเมืองในวิชาเอก • ๒๐๔๔
๖๖. เพื่อทราบโดยทางทางอธิการของบังคับการที่นักเรียนต้องหัดทำแล้วก็ต้องรับรอง • ๒๐๔๔
๖๗. เพื่อเว็บรูปที่จะนำเสนอความสัมพันธ์ระหว่างอาจารย์บกนนิสกับศึกษา • ๒๐๔๔
๖๘. เพื่อพัฒนาทักษะเชิงร่วบในการเรียนผ่านระบบออนไลน์ • ๒๐๔๔
๖๙. เพื่อพัฒนาการอ่านในสูตรเรียนเพื่อส่วนร่วมกิจกรรมประจำการเรียนการสอน • ๒๐๔๔
๗๐. เพื่อพัฒนาทักษะการใช้เทคโนโลยีและเครื่องมือในการสอน • ๒๐๔๔
๗๑. เพื่อเว็บรูปที่แสดงให้เห็นถึงการเปลี่ยนแปลงเนื้อหา • ๒๐๔๔
๗๒. เพื่อเว็บรูปที่แสดงให้เห็นถึงการสอนแบบอินเทอร์แอคทีฟ • ๒๐๔๔
๗๓. เพื่อเว็บรูปที่แสดงให้เห็นถึงการสอนแบบอินเทอร์แอคทีฟ • ๒๐๔๔
๗๔. จุดนั่งหมายเขียนของอาจารย์ (โปรดกรอก) • ๒๐๔๔

วิธีกำจัดงานรักษาการพัฒนาอาชารบ

การซึ่ง

แบบสื่อสารตามที่ ๑ นี้ เป็นข้อความเกี่ยวกับวิธีกำจัดที่อาจใช้กับในเรื่องการพัฒนาอาชารบในวิทยาเขต ของห้าม โปรดอ่านดังกล่าวขอตัวเลขสัญลักษณ์ที่อยู่หัวข้อแต่ละอ ให้แสดงความคิดเห็นของห้ามในลักษณะที่ในนี้

๑. หัวใจซึ่งนัก แสดงถึง สภาพจริง ในปัจจุบัน เกี่ยวกับน้ำหนักการเน้นการใช้ชีวันนี้

๒. หัวใจซึ่งที่ส่อง แสดงถึง ความคิดเห็นของห้าม เกี่ยวกับการเน้นการใช้ชีวันนี้

ความหมายของหัวใจ • ในเบนเดบ. ๖ เบนบางเล็กน้อย. ๗ เบนปานกลาง. ๘ เบนกอนชากมาก. ๙ เบนมาก ห้ามย่าง ห้ามคิดว่า สภาพจริง ในปัจจุบัน วิทยาเขตของห้ามเน้นการใช้ชีวิตในนี้เพื่อการพัฒนาอาชารบเพียงไก และห้ามคิดว่า ควร เน้นชีวันนี้ฯเพียงไก

๓. เสียงวิทยากรจากห้องประชุมห้ามรับจัดโปรแกรมการพัฒนาอาชารบ

หมายเหตุ ๑ ๒ ๓ ๔ ๕

การเป็น ๖ ๗ ๘

ก้าวของนี้แสดงว่า ในวิทยาเขตของห้ามไม่เชิงวิทยากรจากห้องประชุมห้ามรับจัดโปรแกรมการพัฒนาอาชารบ เสม แค่ห้ามเห็นว่าควรใช้ชีวันนี้ฯอย่างมาก

ความหมายของหัวใจ • ในเบนเดบ. ๖ เบนบางเล็กน้อย. ๗ เบนปานกลาง. ๘ เบนกอนชากมาก. ๙ เบนมาก

ห้ามคิดว่า สภาพจริง ในปัจจุบัน วิทยาเขตของห้ามเน้นการใช้ชีวิตในนี้เพื่อการพัฒนาอาชารบ เพียงไก และห้ามคิดว่า ควร เน้นการใช้ชีวันนี้ฯเพียงไก

๔. การประชุมเชิงปฏิบัติการ หรือการให้ความรู้ เกี่ยวกับเทคนิคการสอนแบบทั่วไป

สภาพจริง ๖ ๗ ๘ ๙

การเป็น ๖ ๗ ๘ ๙

๕. การประชุมเชิงปฏิบัติการ หรือการอบรมระบบสืบสาน ให้ทันท่วงเนื้องหา วิชา หรือเพื่อหาความรู้ใหม่ๆในวิชาที่สอน

สภาพจริง ๖ ๗ ๘ ๙

การเป็น ๖ ๗ ๘ ๙

๖. การประชุมเชิงปฏิบัติการ หรือการสัมนา เกี่ยวกับการพัฒนาลักษณะ

สภาพจริง ๖ ๗ ๘ ๙

การเป็น ๖ ๗ ๘ ๙

๗. การประชุมเชิงปฏิบัติการ หรือการสัมนา เกี่ยวกับการพัฒนาและ การประนีด化 นิสิตนักศึกษา

สภาพจริง ๖ ๗ ๘ ๙

การเป็น ๖ ๗ ๘ ๙

๘. การประชุมเชิงปฏิบัติการ การสัมนา หรือการจัดโปรแกรมทั่วไปใน อาชารบ เช่น ใจรุนแรง หมาบช่องทางวิทยาลัยและประเภทของนิสิตนักศึกษา

สภาพจริง ๖ ๗ ๘ ๙

การเป็น ๖ ๗ ๘ ๙

๙. การประชุมเชิงปฏิบัติการ หรือการจัดโปรแกรม เนื้อร่วมในห้องเรียนปั้นปู ห้องเรียนวิชาการและ การให้คำปรึกษา

สภาพจริง ๖ ๗ ๘ ๙

การเป็น ๖ ๗ ๘ ๙

ความหมายของคำว่า “ในเน้นเดบ.” ๒ เน้นบางสิ่งน้อย ๓ เน้นมาก

- ๑. ถ้าการประชุมใช้ป้ายที่ติดการ หรือการสัมนา เพื่อช่วยให้อาจารบ์ปรับปรุงหักษ์
ก้านวิชาการ และการวิจัย
- ๒. การประชุมใช้ป้ายที่ติดการ การสัมนา หรือการจัดไปร่วมกัน เพื่อยุ่งกับการ
ปรับปรุงกิจกรรมทางงานของภาควิชา
- ๓. การประชุมใช้ป้ายที่ติดการ หรือการให้ความรู้ เกี่ยวกับการสำรวจข้อมูลหัวทั่วไป
และแนวโน้มทางการศึกษา
- ๔. การประชุมใช้ป้ายที่ติดการ หรือการจัดไปร่วมกันเพื่อยุ่งกับการปรับปรุง
ปรับปรุงความสามารถในการพัฒนาบุคลิกภาพเด็ก และสร้างวิถีทางการศึกษา
- ๕. การประชุมที่ต้องการสอนของอาจารย์บางมีระดับโดยนิสิตนักศึกษา
เพื่อนำมาปรับปรุงการสอน
- ๖. การวัดผลอาจารย์บ่อบางมีระดับโดยอาจารย์ห้านอ่น (ไทยวิช
สังเกตการสอน หรือใช้แบบฟอร์มประเมินยกล) เพื่อนำมาปรับปรุงการสอน
และปรับปรุงวิชาที่สอน
- ๗. การประชุมของอาจารย์บ่อบางไม่เป็นทางการโดยอาจารย์ห้านอ่น เพื่อนำมาปรับปรุงการสอน
- ๘. อาจารย์บ่อบางมีระดับโดยบุญริหาร เพื่อนำมาปรับปรุง
การสอน
- ๙. การจัดระบบให้อาจารบ์ประชุมบุคลากรเอง
- ๑๐. เชิญบุคคลจากภายนอกมาสอนเพื่อยืดหยุ่นเรียน และวินิจฉัยการสอน
- ๑๑. จัดทำแบบันท์กษาภู่ร์ สอนห้าน อัน เพื่อนำมาวิเคราะห์สำหรับปรับปรุง
การสอน
- ๑๒. อาจารย์ที่มีความเชี่ยวชาญ ในคำปรึกษาแก้อาจารบ์ห้านอ่นเกี่ยวกับการ
ปรับปรุงการสอนและวิชาที่สอน
- ๑๓. จัดอาจารย์ที่มีความสามารถ หรืออาจารย์ที่มีประสบการณ์ให้ห้องงานนิสิต
กับอาจารย์ใหม่
- ๑๔. อาจารย์แบบน้ำหนาห่างวิชาชีพและส่วนที่ควรของอาจารย์แยกหัว
- ๑๕. อาจารย์เชี่ยวชาญให้ความช่วยเหลือแก้อาจารบ์ห้านอ่นเรื่องการใช้
ใบพัพน์ประเมินก่อนการสอน

- ๑. ช่วงปีการศึกษา ๒๕๖๓/๒๕๖๔ ห้านเข้าร่วมกิจกรรมการพัฒนาอาจารย์เรื่อยมา ถ้าเข้าร่วมไปประจำบุกจกรรมที่ห้านเห็นว่ามีประโยชน์มากที่สุด และบอกว่ากิจกรรมนั้นสำคัญอย่างไร
- ๒. ไปประจำบุณฑุ์มากท่างานเกี่ยวกับการปฏิบัติงานของอาจารย์ในมหาวิทยาลัยนี้ ซึ่งห้านเห็นว่าจริงเป็นก้องอาภัย การพัฒนาความรู้ ทักษะ และ ทักษะทางปัจจุบัน
- ๓. ไปประจำบุณฑุ์มากท้างานของการปฏิบัติงานของอาจารย์มานานกว่า ๙ เดือนแล้ว ที่ห้านเห็นว่าเป็นก้องมีการปรับปรุง สภาพการทำงาน หรือปรับปรุงการให้บริการอาจารย์

จัดทำโดย คุณครู ดร. สมชาย ใจดี สถาบันปีที่ ๔ ประจำปีการศึกษา ๒๕๖๓/๒๕๖๔

II. ENGLISH VERSION QUESTIONNAIRE

SECTION I
PERSONAL DATA

1. Campus
2. Faculty
3. Department
4. Position
 - a. Academic position:lecturer;assistant professor;
.....associate professor; orprofessor.
 - b. Administrative position:Department Head;Associate Dean;Dean;
.....Vice President;President; or other position (specify)
5. Professional qualification(s):

Degree, Diploma, or Certificate Completed	Name of Institution	Year
.....
.....
.....
.....
.....
.....
.....

6. Main field of study or teaching specialization
.....
7. Years of Teaching Experience (include current year)
 - a. Teaching in this university yrs.
 - b. Teaching at university level yrs.
 - c. Teaching at college level yrs.
 - d. Teaching at secondary school level yrs.
 - e. Teaching at elementary school level yrs.
8. Specify your most recent fulltime work experience outside of this university.
.....

SECTION II**AIMS OF FACULTY DEVELOPMENT****Instructions**

The following list consists of selected aims related to faculty development programs and to needs or interests of academic staff. For each item, you are asked to circle a number to indicate your perception of the the importance of the faculty development aim.

The numbers of the scale correspond to the following ratings:

1=no need, 2=limited need, 3=moderate need, 4=considerable need, 5=great need

Example

What is your perception of the current need for development in each of the following aims?

To learn how to use community resources in the instructional program. 1 2 3(4)5

The reponse indicates that the respondent perceives that "learning about how to use community resources" is a considerable need personally by him.

Response key: 1=no need, 2=limited need, 3=moderate need, 4=considerable need, 5=great need

What is your perception of the current need for development in each of the following aims?

- | | |
|--|-----------|
| 1. To understand the philosophy underlying this university. | 1 2 3 4 5 |
| 2. To develop knowledge and skills in human relations. | 1 2 3 4 5 |
| 3. To learn about this institution's problems related to implementation of instructional programs. | 1 2 3 4 5 |
| 4. To learn how to individualize instruction. | 1 2 3 4 5 |
| 5. To acquire a knowledge of the history of this university. | 1 2 3 4 5 |
| 6. To understand student behavior. | 1 2 3 4 5 |

**Response key: 1=no need, 2=limited need, 3=moderate need, 4=considerable need,
5=great need**

- | | |
|--|-----------|
| 7. To improve skills in public speaking. | 1 2 3 4 5 |
| 8. To understand the administration of educational organizations. | 1 2 3 4 5 |
| 9. To learn the psychology of the adult student. | 1 2 3 4 5 |
| 10. To learn to integrate content activities with other courses. | 1 2 3 4 5 |
| 11. To improve skills in using audio-visual equipment and materials. | 1 2 3 4 5 |
| 12. To understand the motivation of the adult student. | 1 2 3 4 5 |
| 13. To develop personal philosophy of education. | 1 2 3 4 5 |
| 14. To increase knowledge of fields related to one's own teaching specialty. | 1 2 3 4 5 |
| 15. To learn how to use self-evaluation techniques to improve teaching performance. | 1 2 3 4 5 |
| 16. To develop an awareness of one's responsibility towards colleagues and professional associations. | 1 2 3 4 5 |
| 17. To acquire knowledge and skills necessary for college teaching but were not acquired from preservice training. | 1 2 3 4 5 |
| 18. To improve own performance to meet expectations of students, parents and public. | 1 2 3 4 5 |
| 19. To develop communication practices which encourage good public relations. | 1 2 3 4 5 |
| 20. To update knowledge in own area of specialization. | 1 2 3 4 5 |
| 21. To develop good working relationships with colleagues. | 1 2 3 4 5 |
| 22. To understand the role of guidance and counseling services in this campus. | 1 2 3 4 5 |
| 23. To understand the role of the academic staff in this campus. | 1 2 3 4 5 |
| 24. To develop communication skills for instructing in student-opinion oriented programs. | 1 2 3 4 5 |
| 25. To learn to instruct students with learning handicaps (e.g., low verbal ability). | 1 2 3 4 5 |
| 26. To improve skills in using the lecture technique. | 1 2 3 4 5 |
| 27. To understand the politics involved in education. | 1 2 3 4 5 |
| 28. To learn how to conduct social science research. | 1 2 3 4 5 |
| 29. To learn how to structure learning experience (simple to complex). | 1 2 3 4 5 |

Response key: 1=no need, 2=limited need, 3=moderate need, 4=considerable need, 5=great need

30. To develop strategies for evaluating instructional objectives.	1 2 3 4 5
31. To learn ways of reinforcing learning.	1 2 3 4 5
32. To improve skills in using field trips and field experience.	1 2 3 4 5
33. To learn about "youth culture".	1 2 3 4 5
34. To learn how to diagnose students' educational needs.	1 2 3 4 5
35. To learn how to construct instruments for evaluating students' progress.	1 2 3 4 5
36. To learn to write instructional objectives for programs, courses and topics.	1 2 3 4 5
37. To learn about political and socio-economic factors influencing this campus.	1 2 3 4 5
38. To learn how to use one's leisure time.	1 2 3 4 5
39. To learn how to prepare independent study materials.	1 2 3 4 5
40. To develop a commitment to the goals of the university.	1 2 3 4 5
41. To learn theories of teaching and learning of adult students.	1 2 3 4 5
42. To learn the uses of group dynamics.	1 2 3 4 5
43. To develop a sensitivity for students' emotional and social needs	1 2 3 4 5
44. To learn about accepted policies regarding student admissions and attendance.	1 2 3 4 5
45. To understand theories of social organizations	1 2 3 4 5
46. To learn how to disseminate one's own professional writing	1 2 3 4 5
47. To learn and apply curriculum planning and development	1 2 3 4 5
48. To conduct research related to the instruction, curriculum and teaching	1 2 3 4 5
49. To learn to write programmed course units	1 2 3 4 5
50. To learn about the operation and function of the university's educational media center (includes library)	1 2 3 4 5
51. To learn about the functions of administration in this campus	1 2 3 4 5
52. To learn about community services available to students in this campus	1 2 3 4 5

**Response key: 1=no need, 2=limited need, 3=moderate need, 4=considerable need,
5=great need**

- | | |
|--|-----------|
| 53. To acquire a knowledge of one's expected involvement in university extracurricular activities. | 1 2 3 4 5 |
| 54. To learn about grouping students for instruction. | 1 2 3 4 5 |
| 55. To improve discussion techniques in teaching. | 1 2 3 4 5 |
| 56. To learn about educational innovations in higher education. | 1 2 3 4 5 |
| 57. To understand the implication of an "open door" policy in higher education. | 1 2 3 4 5 |
| 58. To learn to use the computer in university teaching. | 1 2 3 4 5 |
| 59. To learn to prepare materials for programmed, multi-media approaches to teaching. | 1 2 3 4 5 |
| 60. To know the characteristics of this campus' student body. | 1 2 3 4 5 |
| 61. To acquire a knowledge of the career opportunities available to graduates of the university. | 1 2 3 4 5 |
| 62. To learn how to develop interpersonal relationships among students and staff. | 1 2 3 4 5 |
| 63. To develop skill in making learning relevant for students. | 1 2 3 4 5 |
| 64. To develop strategies which will enable students to participate in designing their learning experiences. | 1 2 3 4 5 |
| 65. To develop skills in using games and simulations in teaching. | 1 2 3 4 5 |
| 66. To learn to use audio-visual media in teaching and learning | 1 2 3 4 5 |
| 67. To learn to use techniques other than verbal in teaching | 1 2 3 4 5 |
| 68. Other personal needs development (specify): | 1 2 3 4 5 |
| | 1 2 3 4 5 |
| | 1 2 3 4 5 |
| | 1 2 3 4 5 |

SECTION III

METHODS FOR IMPLEMENTING FACULTY DEVELOPMENT

Instructions

Listed below are a number of practices that might be used for faculty development at your university. For each item, you are asked to circle two numbers to indicate:

1. The emphasis which is **currently** given to each practice, and
2. The degree of emphasis that you would **prefer** to have assigned to it.

Respond by circling a number on each scale

The numbers of the scale correspond to the following ratings:

1=no emphasis, 2=limited emphasis, 3=moderate emphasis, 4=considerable emphasis, 5=great emphasis

Example

What is your perception of the extent to which each practice is **currently** used in your campus and the degree of emphasis that you would prefer to have assigned to it?

Bring in specialists from abroad to help faculty development programs

Actual 1 (2) 3 4 5
Preferred 1 2 3(1)5

The responses indicate that the respondent perceives that limited emphasis was placed on bringing in specialists from abroad as a practice of faculty development in his campus.

1 (2) 3 4 5
Actual Preferred
From this type of practice

**Response key: 1=no emphasis, 2=limited emphasis, 3=moderate emphasis,
4=considerable emphasis, 5=great emphasis**

What is your perception of the extent to which each practice is currently used in your campus, and the degree of emphasis that you would prefer to have assigned to it?

- | | |
|---|---|
| 1. Workshops or presentations that explore various methods or techniques of instruction. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 2. Workshops, seminars, or short courses that review subject matter or introduce new knowledge in a field. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 3. Workshops or seminars dealing with a new or different approaches to develop curricula. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 4. Workshops or seminars on testing and evaluating student performance. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 5. Workshops, seminars, or programs to acquaint faculty with goals of the institutions and types of students enrolled. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 6. Workshops or programs to help faculty improve their academic advising and counseling skills. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 7. Workshops or seminars to help faculty improve their research and scholarship skills. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 8. Workshops, seminars, or programs to improve the management of departmental operations. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 9. Workshops or presentations that explore general issues or trends in education. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 10. Workshops or programs in faculty affective development such as those aiming at improving interpersonal skills and exploring educational values. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 11. Systematic ratings of instruction by students used to help faculty improve. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 12. Formal assessments by colleagues for teaching or course improvement (i.e., visitations or use of assessment form) | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 13. Informal assessment by colleagues for teaching or course improvement | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 14. Systematic teaching or course evaluations by an administrator for improvement purposes | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |

Response key: 1=no emphasis, 2=limited emphasis, 3=moderate emphasis,
4=considerable emphasis, 5=great emphasis

- | | |
|---|---|
| 15. System for faculty to assess their own strengths and areas needing improvement | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 16. Classroom visitation by an instructional resource person (i.e., a development specialist), upon request, followed by a diagnosis of teaching. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 17. Analysis of in-class video tapes to improve instruction. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 18. Faculty with expertise consult with other faculty on teaching or course improvement | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 19. Master teachers or senior faculty work closely with new teachers. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 20. Professional and personal development plan for individual faculty members. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 21. Specialists on campus to assist faculty in use of audiovisual aids in instruction. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 22. Assistance to faculty in use of instructional technology as a teaching aid (e.g., programmed learning). | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 23. Specialists to assist individual faculty in instructional or course development by consulting on course objectives and course design. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 24. Specialists to help faculty develop teaching skills such as lecturing or leading discussions, or to encourage use of different teaching-learning strategies such as individualized instruction. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 25. Simulated procedures which enable faculty to learn and practice specific teaching skills (e.g., micro teaching) | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 26. Special professional library readily accessible to faculty dealing with instructional methodology, teaching skills, psychology of learning, and similar topics. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 27. Visitations to other institutions (or other campus of this university) to review educational programs or innovative projects. | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 28. Faculty exchange programs with other institutions | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 29. Faculty take courses offered by colleagues | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| 30. Personal counseling provided individual faculty members career goals and other personal development areas | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |

Response key: 1=no emphasis, 2=limited emphasis, 3=moderate emphasis,
4=considerable emphasis, 5=great emphasis

31. Circulation of newsletters, articles, etc., that are pertinent
to teaching improvement or faculty development

Actual 1 2 3 4 5
Preferred 1 2 3 4 5

32. Other methods of faculty development (specify):

a.

Actual 1 2 3 4 5

Preferred 1 2 3 4 5

b.

Actual 1 2 3 4 5

Preferred 1 2 3 4 5

c.

Actual 1 2 3 4 5

Preferred 1 2 3 4 5

SECTION IV
**ORGANIZATIONAL ARRANGEMENTS FOR IMPLEMENTING
FACULTY DEVELOPMENT**
Instructions

In this section, you are asked to indicate your perceptions of actual arrangements and preferred arrangements relating to the faculty development activities in your university. Circle the appropriate number on the response scale.

Response key: 1=none, 2=limited extent, 3=some extent, 4=fair extent, 5=great extent

1 To what extent are faculty development programs? What is your preference?

of the following

a Beginning of university term Actual 1 2 3 4 5
Preferred 1 2 3 4 5

b During university term Actual 1 2 3 4 5
Preferred 1 2 3 4 5

c During the intersession periods Actual 1 2 3 4 5
Preferred 1 2 3 4 5

d Summer sessions Actual 1 2 3 4 5
Preferred 1 2 3 4 5

2 To what extent are the faculty development programs? What is your preference?

of the following

e During summer Actual 1 2 3 4 5
Preferred 1 2 3 4 5

f During intersession Actual 1 2 3 4 5
Preferred 1 2 3 4 5

g During term Actual 1 2 3 4 5
Preferred 1 2 3 4 5

h During summer Actual 1 2 3 4 5
Preferred 1 2 3 4 5

i During intersession Actual 1 2 3 4 5
Preferred 1 2 3 4 5

j During term Actual 1 2 3 4 5
Preferred 1 2 3 4 5

k During summer Actual 1 2 3 4 5
Preferred 1 2 3 4 5

**Response key: 1=none, 2=limited extent, 3=moderate extent, 4=considerable extent,
5=great extent**

3 To what extent do each of the following assume active responsibility for staff development programs in this campus? What is your preference for this responsibility?

- | | |
|---|---|
| a President | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| b Vice-president of own campus
Preferred 1 2 3 4 5 | Actual 1 2 3 4 5 |
| c Vice-president in charge
of academic affairs | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| d Dean of own faculty | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| e Associate Dean in own
campus | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| f Department head of own department | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| g Faculty committee at Prasarnmit | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| h Faculty committee at own campus | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| i Faculty development officers | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |

To what extent is use made of the following sources of expertise for faculty development activities? What is your preference for sources of expertise?

- | | |
|---|---|
| a President | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| b Vice-president of own campus | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| c Vice-president in charge
of academic affairs | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| d Dean of own faculty | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| e Associate Dean in own
campus | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| f Department Head of own Department | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |
| g Faculty committee at Prasarnmit | Actual 1 2 3 4 5
Preferred 1 2 3 4 5 |

**Response key: 1=none, 2=limited extent, 3=moderate extent, 4=considerable extent,
5=great extent**

h.	Faculty committee at own campus	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
i.	Faculty development officers	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
j.	Specialist consultants outside the university	Actual 1 2 3 4 5 1 2 3 4 5
k.	Faculty development officer	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
5.	To what extent does your university make the following provisions in order to encourage participation in faculty development activities? What is your preference for provisions?	
a.	Temporary teaching load reductions to work on a new course, major course revision, or research	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
b.	Lighter than normal load for first year faculty	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
c.	Sabbatical (leave with salary)	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
d.	Salary credit for completed program of faculty development	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
e.	Funds for use by faculty members to develop new course or approaches to instruction	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
f.	Travel grants to refresh or update knowledge in a particular field	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
g.	Travel funds available to attend professional conferences	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
h.	Visiting scholars programs that bring people to the campus for short or long periods	Actual 1 2 3 4 5 Preferred 1 2 3 4 5
i.	Organizational arrangements of faculty development (specify):	
"		Actual 1 2 3 4 5 Preferred 1 2 3 4 5
"		Actual 1 2 3 4 5 Preferred 1 2 3 4 5
"		Actual 1 2 3 4 5 Preferred 1 2 3 4 5
"		Actual 1 2 3 4 5

SECTION V**GENERAL QUESTIONS**

1. Describe the most significant (if any) inservice, orientation, or professional development activity in which you participated during 1980-1981 academic year; state how helpful it was to you.

.....
.....
.....
.....
.....

2. Describe any recurring problems related to academic staff performance in your university, for which you see the need for more knowledge, attitude or skill development.

.....
.....
.....
.....
.....

3. Describe any recurring problems related to academic staff performance in your university, for which you see the need for adjustment in conditions of work or faculty support provisions?

.....
.....
.....
.....
.....

Indicate your own plans (if any) for further professional development in 1982-1983 academic year.

.....
.....
.....
.....
.....

APPENDIX B
TABLES

Table 6.1

Mean scores and Rank Order of Faculty Development Aims
by the Total Sample

Item No.	Aim	Mean Score	Rank
14.	To increase knowledge of fields related to one's own teaching specialty.	4.58	1
20.	To update knowledge in own area of specialization.	4.45	2
15.	To learn how to use self-evaluation techniques to improve teaching performance.	4.21	3
2.	To develop knowledge and skills in human relations.	4.16	4
16.	To develop an awareness of one's responsibility towards colleagues and professional associations.	4.11	5
10.	To learn to integrate content activities with other courses.	4.04	6
67.	To learn to use techniques other than verbal in teaching.	3.96	7
48.	To conduct research related to the instructor's own course and teaching	3.94	8
56.	To learn about educational innovation in higher education	3.93	9
3.	To learn about this institution's problems related to implementation of instructional programs	3.86	10
55.	To improve discussion techniques in teaching.	3.85	11
83.	To develop skill in making learning relevant for students.	3.84	12

Table 6.1 (continued)

Item No.	Aim	Mean Score	Rank
19.	To develop communication practices which encourage good public relations.	3.83	13
11.	To improve skills in using audio-visual equipment and materials.	3.81	14
18.	To improve own performance to meet expectations of students, parents and public.	3.80	16
21.	To develop good working relationships with colleagues.	3.80	16
31.	To learn ways of reinforcing learning.	3.80	16
6.	To understand student behavior.	3.77	18
12.	To understand the motivation of the adult student.	3.76	19
1.	To understand the philosophy underlying this university.	3.73	20
8.	To understand the administration of educational organizations	3.69	22.5
26.	To improve skills in using the lecture technique.	3.69	22.5
47.	To learn and apply curriculum planning and development.	3.69	22.5
64.	To develop strategies which will enable students to participate in designing their learning experiences.	3.69	22.5
30.	To develop strategies for evaluating instructional objectives	3.66	25

Table 6.1 (continued)

Item No.	Aim	Mean Score	Rank
35.	To learn how to construct instruments for evaluating students' progress.	3.65	27
58.	To learn to use the computer in university teaching.	3.65	27
66.	To learn to use audio-visual media in teaching and learning.	3.65	27
17.	To acquire knowledge and skills necessary for college teaching but were not acquired from preservice training.	3.64	29
59.	To learn to prepare materials for programmed, multi-media approaches to teaching.	3.63	30
28.	To learn how to conduct social science research.	3.62	31
24.	To develop communication skills for instructing in student-opinion oriented programs.	3.57	32
7	To improve skills in public speaking.	3.54	34
46.	To learn how to disseminate one's own professional writing.	3.54	34
61.	To acquire a knowledge of the career opportunities available to graduates of the university.	3.54	34
13.	To develop personal philosophy of education.	3.53	36
39.	To learn how to prepare independent study materials.	3.52	37
57.	To understand the implication of an "open door" policy in higher education.	3.51	38.5

Table 6.1 (continued)

Item No.	Aim	Mean Score	Rank
62.	To learn how to develop interpersonal relationships among students and staff.	3.51	38.5
34.	To learn how to diagnose students' educational needs.	3.50	40.5
42.	To learn the uses of group dynamics.	3.50	40.5
36.	To learn to write instructional objectives for programs, courses and topics.	3.47	42
29.	To learn how to structure learning experience (e.g., simple to complex).	3.44	43
52.	To learn about community services and human resources available to this campus.	3.42	44.5
53.	To acquire a knowledge of one's expected involvement in university extracurricular activities.	3.42	44.5
4.	To learn how to individualize instruction.	3.41	46
27.	To understand the politics involved in education.	3.40	47
25	To learn to instruct students with learning handicaps (e.g., low verbal ability).	3.39	48
32.	To improve skills in using field trips and field experience.	3.37	49
22	To understand the role of guidance and counseling services in this campus.	3.35	50.5
41.	To learn theories of teaching and learning of adult students.	3.35	50.5

Table 6.1 (continued)

Item No.	Aim	Mean Score	Rank
23.	To understand the role of the academic staff in this campus.	3.34	53
37.	To learn about political and socio-economic factors influencing this campus.	3.34	53
40.	To develop a commitment to the goals of the university.	3.34	53
9.	To learn the psychology of the adult student.	3.33	55.5
65.	To develop skills in using games and stimulation in teaching.	3.33	55.5
43.	To develop a sensitivity for students' emotional and social needs.	3.32	57.5
50.	To learn about the operation and function of the university's educational media (includes library).	3.32	57.5
54.	To learn about grouping students for instruction.	3.30	59
49.	To learn to write programmed course units.	3.27	60
45.	To understand theories of social organizations.	3.23	61.5
51.	To learn about the functions of administration in this campus	3.23	61.5
44.	To learn about accepted policies regarding student admissions and attendance.	3.18	63
33.	To learn about "youth culture".	3.11	64
38.	To learn how to use one's leisure time.	3.08	65

Table 6.1 (continued)

Item No.	Aim	Mean Score	Rank
60.	To know the characteristics of this campus' student body.	2.92	66
5.	To acquire a knowledge of the history of this university.	2.32	67

Table 6.2

Mean Scores and Rank Order of Faculty Development Methods
Perceived as Actual Practices by the Total Sample

Item No.	Method	Mean Score	Rank
3.	Workshops or seminars dealing with curriculum development.	2.30	1
28.	Faculty exchange programs with other institutions.	1.96	2
2.	Workshops, seminars, or short courses on subject matter.	1.95	3.5
6.	Workshops or programs on academic advising and counseling.	1.95	3.5
7.	Workshops or seminars on research and scholarship skills.	1.89	5
1.	Workshops or presentations that explore various methods of instruction.	1.86	6
4.	Workshops or seminars on student testing.	1.85	7
29.	Faculty take courses offered by colleagues.	1.82	8
26.	Special professional library.	1.80	9
5.	Workshops, seminars, or programs on institutional goals and types of students.	1.73	11
21.	Specialists on campus to assist faculty in use of audiovisual aids.	1.73	11

Differences of Mean Scores of Faculty Development Aims
Between Faculty Members and Administrators

Aim	Fac. Mem. N=89		Admin. N=39		T	P
	M	SD	M	SD		
Understand the philosophy existing this university.	3.67	.00	3.87	1.10	-0.98	0.33
To develop knowledge and skills in human relations.	4.13	0.69	4.21	0.86	-0.49	0.63
To learn about this institution's problems related to implementation of instructional programs.	3.83	0.94	3.92	0.93	-0.51	0.61
To learn how to individualize instruction.	3.40	1.04	3.41	0.88	-0.03	0.98
To acquire a knowledge of the history of this university.	2.41	1.06	2.13	1.11	1.36	0.18
To understand student behavior.	3.79	1.01	3.74	0.94	0.23	0.82
To improve skills in public speaking.	3.52	1.07	3.59	1.04	-0.36	0.72
To understand the administration of educational organizations.	3.66	1.07	3.74	0.97	-0.41	0.69
To learn the psychology of: the adult student.	3.35	1.01	3.28	0.94	0.35	0.73
10. To learn to integrate content activities with other courses.	4.12	0.80	3.85	0.93	1.72	0.09
11. To improve skills in using audio-visual equipment and materials.	3.81	1.00	3.79	0.86	0.08	0.94
12. To understand the motivation of the adult student.	3.83	0.94	3.59	0.99	1.31	0.19

Table 6.8 (continued)

Item No.	Aim	Fac. Mem. N=89		Admin. N=39		T	P
		MS	SD	MS	SD		
1.	To develop personal philosophy of education.	3.51	0.92	3.59	0.88	-0.48	0.63
4.	To increase knowledge of aids related to one's own teaching specialty.	4.63	0.59	4.46	0.76	-1.35	0.185
15.	To learn how to use self-evaluation techniques to improve teaching performance.	1.22	0.86	4.18	0.68	0.29	0.77
7.	To develop an awareness of one's responsibility towards colleagues and professional associations.	.14	0.89	4.05	0.97	0.48	0.63
8.	To acquire knowledge and skills necessary for college teaching but were not acquired from preservice training.	3.58	1.13	3.76	1.08	-0.83	0.41
11.	To improve own performance to meet expectations of students, parents and public.	.83	0.99	3.74	1.08	0.47	0.64
12.	To develop communication practices which encourage good public relations.	3.82	0.87	3.84	0.95	-0.13	0.90
13.	To update knowledge in own area of specialization.	1.48	0.74	4.37	0.68	0.82	0.41
14.	To develop good working relationships with colleagues.	3.84	1.02	3.71	0.84	0.70	0.48
15.	To understand the role of guidance and counseling services in this campus.	1.45	1.02	3.11	1.13	1.68	0.10
16.	To understand the role of academic staff in this campus.	1.30	1.06	3.42	1.13	-0.56	0.58

Table 6.8 (continued)

Item No.	Aim	Fac. Mem. N=89		Admin. N=39		T	P
		MS	SD	MS	SD		
24.	To develop communication skills for instructing in student-opinion oriented programs.	3.52	1.01	3.68	0.96	-0.84	0.40
25.	To learn to instruct students with learning handicaps (e.g., low verbal ability).	3.42	1.01	3.32	1.09	0.50	0.62
26.	To improve skills in using the lecture technique.	3.74	1.00	3.58	0.89	0.87	0.39
27.	To understand the politics involved in education.	3.46	0.93	3.26	1.11	1.03	0.30
28.	To learn how to conduct social science research.	3.73	1.11	3.37	1.17	1.66	1.00
29.	To learn how to structure learning experience (e.g., simple to complex).	3.45	1.00	3.42	1.08	0.14	0.89
30.	To develop strategies for evaluating instructional objectives.	3.66	0.91	3.65	0.98	0.06	0.95
31.	To learn ways of reinforcing learning.	3.83	0.93	3.73	0.96	0.54	0.59
32.	To improve skills in using field trips and field experience.	3.44	1.02	3.21	1.07	1.16	0.25
33.	To learn about "youth culture".	3.16	1.03	3.00	1.09	0.77	0.44
34.	To learn how to diagnose students' educational needs.	3.49	0.92	3.50	1.03	-0.03	0.98
35.	To learn how to construct instruments for evaluating students' progress.	3.60	0.85	3.76	0.94	-0.94	0.35

Table 6.8- (continued)

Item No.	Aim	Fac. Mem. N=89			Admin. N=39		
		MS	SD	MS	SD	T	P
36.	To learn to write instructional objectives for programs, courses and topics.	3.42	1.16	3.61	1.05	-0.87	0.39
37.	To learn about political and socio-economic factors influencing this campus.	3.40	1.12	3.18	1.14	1.01	0.31
38.	To learn how to use one's leisure time.	2.96	1.33	3.37	1.17	-1.66	0.10
39.	To learn how to prepare independent study materials.	3.46	1.08	3.66	0.99	-0.97	0.34
40.	To develop a commitment to the goals of the university.	3.38	1.15	3.58	1.03	-0.94	0.35
41.	To learn theories of teaching and learning of adult students.	3.27	1.04	3.53	0.95	-1.30	0.20
42.	To learn the uses of group dynamics.	3.49	1.04	3.53	1.06	-0.19	0.85
43.	To develop a sensitivity for students' emotional and social needs.	3.35	1.08	3.24	1.10	0.53	0.60
44.	To learn about accepted policies regarding student admissions and attendance.	3.09	1.09	3.39	1.05	-1.45	0.15
45.	To understand theories of social organizations.	3.13	1.01	3.45	1.18	-1.51	0.13
46.	To learn how to disseminate one's own professional writing.	3.47	1.08	3.68	0.99	-1.04	0.30
47.	To learn and apply curriculum planning and development.	3.63	0.97	3.84	0.89	-1.16	0.25
48.	To conduct research related to the instructor's own course and teaching.	3.97	0.94	3.89	0.76	0.41	0.68

Table 8.8 (continued)

Item No.	Aim	Fac. Mem. N=89			Admin. N=39			P
		MS	SD	MS	SD	T		
49.	To learn to write programmed course units.	3.21	1.14	3.39	1.20	-0.81	0.42	
50.	To learn about the operation and function of the university's educational media (includes library).	3.31	1.04	3.32	1.03	-0.05	0.96	
51.	To learn about the functions of administration in this campus.	3.16	1.05	3.39	0.97	-1.19	0.24	
52.	To learn about community services and human resources available to this campus.	3.40	0.97	3.47	1.01	-0.40	0.69	
53.	To acquire a knowledge of one's expected involvement in university extracurricular activities.	3.38	0.97	3.50	1.11	-0.66	0.55	
54.	To learn about grouping students for instruction.	3.25	1.04	3.42	1.03	-0.87	0.39	
55.	To improve discussion techniques in teaching.	3.91	0.90	3.71	0.96	4.42	0.26	
56.	To learn about educational innovation in higher education.	3.91	0.94	3.97	1.08	-0.34	0.74	
57.	To understand the implication of an "open door" policy in higher education.	3.42	0.98	3.74	1.03	-1.67	0.10	
58.	To learn to use the computer in university teaching.	3.76	1.17	3.39	1.33	1.55	0.12	
59.	To learn to prepare materials for programmed, multi-media approaches to teaching.	3.67	1.01	3.53	1.22	0.71	0.48	
60.	To know the characteristics of this campus' student body.	2.90	1.00	2.97	1.22	-0.36	0.72	

Table 8.8 (continued)

Item No.	Aim	Fac. Mem. N=89		Admin. N=39		T	P
		MS.	SD	MS.	SD		
61.	To acquire a knowledge of the career opportunities available to graduates of the university	3.56	1.07	3.47	1.11	-0.42	0.67
62.	To learn how to develop interpersonal relationships among students and staff.	3.49	1.00	3.55	0.98	-0.30	0.76
63.	To develop skill in making learning relevant for students	3.84	0.89	3.84	1.00	0.00	1.00

Table 6.29
General Issues Regarding Faculty Development

Issue	Frequency
Activities Recently Participated	
Seminars	25
Workshops	7
Curriculum development	4
Conferences	3
Evaluation	3
Instructional development	2
Personal development	2
Others	4
Problems Requiring More Knowledge, Attitude or Skill Development	
Incompetent administrators	22
Low faculty commitment and responsibility	21
Incompetent faculty members	15
Inadequate knowledge and uses of educational technologies	4
Problems Requiring Adjustment in Conditions of Works	
Low salary	11
Lack of encouragement	10
Excessive assignments	8
Inadequate comfortable offices with privacy	7
Lack of supports (facilities and finance)	7
Insufficient qualified textbooks	5
Low morale and lack of academic freedom	4
Personal conflict among faculty members	2
Faculty holding secondary jobs	2
Lack of role definition	1
Inferior classroom facilities	1
Lack of cooperation among units	1
Lack of long-range planning	1
Plans for Further Professional Development	
Writing textbooks or academic papers	16
Revising course materials	13
Improving knowledge and teaching methods	8
Seeking study leaves (abroad)	7
Attending seminars and workshops	7
Participating university exchange programs	5
Professional field trips	3
Conducting research	2
