Learning from Cyberattacks

Posted on [November 14, 2024](#) by [Brewster Kahle](#)

The Wayback Machine, Archive.org, Archive-it.org, and OpenLibrary.org came up in stages over the week after cyberattacks with some of the contributor features coming up over the last couple of weeks. A few to go. Much of the development during this time has been focused on securing the services so they can still run while attacks continue.

The Internet Archive is adapting to a more hostile world, where DDOS attacks are recurring periodically (such as yesterday and today), and more severe attacks might happen. Our response has been to harden our services and learn from friends. This note is to share some high level findings, without being so detailed as to help those that are still attacking archive.org.
