SAMPLE INFORMATION

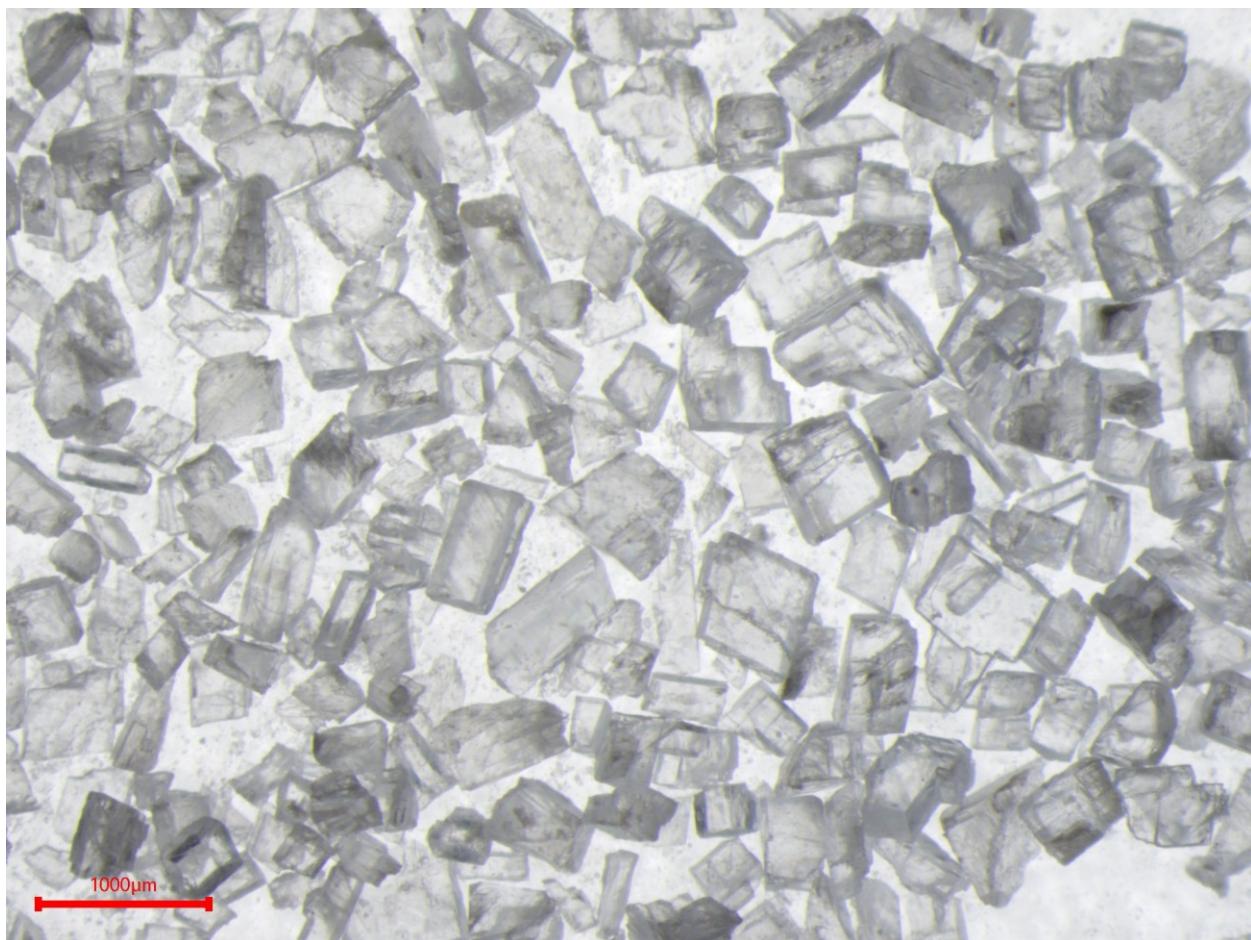

Date of validity	2024-06-12
CCIM root sample number	S0161
CCIM sub-sample number(s)	
Alias (CCIM or external) sample names	
Isotope systems calibrated with this RM*	18O-16O, 13C-12C
Trace elements calibrated with this RM*	
Material type	mineral
Mineral name	calcite
Other material type	
Material composition (basic)	CaCO3
Material original growth context if known	from multi-mineral rock
Originating rock type	calc-silicate xenolith
Co-occurring minerals (if relevant as RM)	
Co-occurring CCIM RM sample numbers	
Colour	
Translucence	clear, cloudy
Source of material	T. Chacko, University of Alberta
Originating geographic location	Cascade Slide, NY, USA
Originating geological information	granulite-facies xenolith within Proterozoic anorthosite, Adirondack Mtns, USA (Valley and Essene, 1980)
Form of material in use as RM	many individual sub-samples/pieces, < 1mm
Form of material in reserve	<input checked="" type="checkbox"/> sub-samples, mm to cm size <input type="checkbox"/> original bulk/rock sample
Sub-sample available to qualified researchers	Yes

*see section "Reference Values Summary" for current numbers.

SECONDARY ION MASS SPECTROMETRY (CCIM)

Table 4 reports two representative SIMS sessions analyzing C- and O-isotopes on multiple fragments of calcite S0161 interspersed with analyses of calcite certified reference material IAEA-603 (Assonov et al., 2020). These data demonstrate that S0161 is isotopically homogeneous within analytical uncertainties at the 10 – 20 micron scale, with session standard deviations from multiple spots on multiple grains of $\pm 0.25\text{‰}$ and $\pm 0.10\text{‰}$ for $\delta^{13}\text{C}$ and $\delta^{18}\text{O}$, respectively. The data also show that the C- and O-isotope reference values for S0161, when used for SIMS calcite standardization, yield values for IAEA-603 run as an unknown consistent with its certified numbers.

Table 4: Representative SIMS C- and O-isotope data on S0161 calcite.

		units		
	Data set		1	2
	Instrument		CCIM IMS1280	CCIM IMS1280
	Session		IP21042	IP21046
	CCIM Mount #		M0399	M0400
	Primary beam		Cs+	Cs+
	Secondary ions		13C-, 12C-	18O-, 16O-
	Primary impact energy	keV	20	20
	probe diameter	x 10-6 m	15	15
	Mass resolution	m/ Δm (10%)	2950, 1950	2250, 1950
	Multi-detectors		EM, L'2	H'2, L'2
S0161, calcite	# grains		6	6
	# spots		41	26
	Assumed reference value d18O(VSMOW)	1000* δ		25.31
	Assumed reference value d13C(VPDB)	1000* δ	0.11	
	session spot-spot standard deviation	%	0.25	0.10
IAEA-603, calcite	# grains		38	26
	# spots		41	31
	session median d18O(VSMOW)	1000* δ		28.48
	session median d13C(VPDB)	1000* δ	2.38	
	session spot-spot standard deviation	%	0.40	0.10
	Certified value	1000* δ	2.46 \pm 0.01	28.47 \pm 0.04

REFERENCE VALUES SUMMARY

Table 5: Calcite RM S0161 current reference values.

Isotope-chemical system	Current reference value	Unit	± estimate (same units as value)	Normalization
18O-16O	+25.31	1000• $\delta^{18}\text{O}$	0.10	VSMOW
18O-16O	-5.44	1000• $\delta^{18}\text{O}$	0.10	VPDB
13C-12C	+0.11	1000• $\delta^{13}\text{C}$	0.10	VPDB

DEFINITIONS AND TERMINOLOGY

For stable isotope terminology and normalizing values, the following sources were used:

Coplen et al. (2002)

Coplen (2011)

Brand et al. (2014)

Kim et al. (2015)

7. ACKNOWLEDGMENTS

T. Chacko is thanked for providing the source material. L. Otter is thanked for reviewing the text.
